

New York Supreme Court

APPELLATE DIVISION — FIRST DEPARTMENT

In the Matter of a Proceeding under Article 70
of the CPLR for a Writ of Habeas Corpus,
THE NONHUMAN RIGHTS PROJECT, INC., on behalf of KIKO,
Petitioner-Appellant,
against

CARMEN PRESTI, individually and as an officer and director of The Primate
Sanctuary, Inc., CHRISTIE E. PRESTI, individually and as an officer and director
of The Primate Sanctuary, Inc., and THE PRIMATE SANCTUARY INC.,
Respondents.

Certificate of Conformity

I, Peter Coleman Fletcher of Cambridge, England, Notary Public duly authorised admitted and sworn, and practising within the United Kingdom and Northern Ireland do hereby certify and affirm under penalty of perjury that I witnessed the signature of Professor William C. McGrew as applied to the Affidavit attached to this Certificate, which was signed and dated on 21st November 2013.

I confirm that the manner in which the Certificate was signed was, and is, in accordance with, and conforms to, the Laws for taking oaths and acknowledgements in England.

Peter Coleman Fletcher

**AFFIDAVIT OF
WILLIAM C. McGREW**

Index No.:

UNITED KINGDOM)
)
 COUNTRY OF ENGLAND) ss:
)
 CITY OF Cambridge)

William C. McGrew being duly sworn, deposes and says:

Introduction and Qualifications

1. My name is William C. McGrew. I reside and work in Cambridge, England. I was awarded a D.Phil. in Psychology from the University of Oxford in 1970, a Ph.D. from in Social Anthropology from the University of Stirling (Scotland) in 1990, and a Ph.D in Biological Anthropology from the University of Cambridge in 2009.

2. I submit this affidavit in support of Petitioners The Nonhuman Rights Project, Inc. ("NhRP"), on behalf of Kiko, for a writ of habeas corpus. I am a non-party to this proceeding.

3. I am currently Emeritus Professor of Evolutionary Primatology in the Division of Biological Anthropology, Department of Archaeology and Anthropology, University of Cambridge. Since 1972 I have taught the following courses (in reverse chronological order): Cultural Primatology, Apes as Models for Human Evolution, Primate Socio-Ecology at the University of Cambridge; Behavioral Ecology and Conservation Biology, Human Evolutionary Ecology, Mammalogy, Origins of Human Material Culture, and Socio-Ecology of Primates at Miami University (Ohio), Socio-Ecology of Primates at Earlham College (Indiana), Animal Behaviour, Behavioral Primatology, and Developmental Psychology at University of Stirling.

4. I was elected a Fellow of the Royal Society of Edinburgh in 2003 and the American Association for the Advancement of Science in 2005. I am a recipient of the Howells Prize (American Anthropological Association), Prix Delwart (Royal Academy of Sciences, Belgium), and Osman Hill Medal (Primate Society of Great Britain). I have held visiting appointments at the University of California-Berkeley, University of New Mexico; University of North Carolina-Charlotte, Tulane University, as well as the Collegium Budapest (Hungary), College de France (Paris), and Hanse-Wissenschaftskolleg (Delmenhorst, Germany).

5. I have served on the IUCN-SSC Primate Specialist Group, Africa and Great Apes since 2004 and on the Scientific Board, International Primate Protection League since 1977. I served on the Board of Directors of Chimp Haven, Inc. from 1999-2005 and the Council and Executive Committee of the Royal Zoological Society of Scotland in 1975. I have served on the editorial boards of the following scientific journals: *American Journal of Primatology* (1991 - 1999), *Folia Primatologica* (1989 -2009), the *International Journal of Primatology* (1995 - 2000) and *Primates* (1985 - present).

6. My specialization is in the great apes, and especially the study of the behaviour and ecology of chimpanzees. I have done field research on chimpanzees and bonobos from 1972-2012, in six African countries. These studies have spanned the species' range from West Africa (Senegal and Guinea) to Central Africa (Gabon and Congo-Kinshasa) to East Africa (Tanzania and Uganda). I have collected data on wild chimpanzees at more research sites than any other scientist. I have done behavioural research on captive chimpanzees in laboratories, sanctuaries, wildlife parks, and zoological gardens.

7. I have written or co-edited 10 books, seven of which are relevant here, including: *Chimpanzee Material Culture* (1992, Cambridge University Press); *Topics in Primatology. Vol. 1. Human Origins* (1992, University of Tokyo Press); *Chimpanzee Cultures* (1994, Harvard University Press); *Great Ape Societies* (1996, Cambridge University Press); *The Cultured Chimpanzee* (2004, Cambridge University Press), *Chimpanzee Behavior in the Wild* (2010, Springer); *The Evolution of Human Handedness* (2013, Wiley). Some have been translated into such languages as Italian, Japanese, and Slovenian.

8. I have published 162 articles and book chapters on the behaviour, ecology, welfare, or conservation of monkeys and apes, including 101 peer-reviewed articles in the world's most-cited scientific journals: *Nature*, *Science*, *Proceedings of the National Academy of Sciences USA*, *Proceedings of the Royal Society*, *Philosophical Transactions of the Royal Society*, *Evolutionary Anthropology*, *American Journal of Physical Anthropology*, *Animal Behaviour*, *Animal Cognition*, *Current Anthropology*, *Current Biology*, *Trends in Cognitive Science*, as well as more specialised academic periodicals, 44 chapters in edited book volumes, and the rest in the popular press. These publications have covered 15 species of non-human primates, from common marmoset to chimpanzee and gorilla. Specific topics of these publications include: culture, tool-use, diet, sexual

behaviour, sex differences, birth, predation, parasites, social organisation, ranging, kinship, parental behaviour, environmental enrichment, rehabilitation, food-sharing, mating systems, handedness, seasonality, genetics, bipedality, activity budgets, skeletal structure, psychopathology, vegetation ecology, archaeology, alcohol ingestion, and insectivory.

9. I regularly give invited lectures and take part in international symposia in primatology. Over the last 40 years, such speaking engagements have averaged about 4 per year. This does not count many more research talks given at universities or at regional, national or international conferences. These lectures and symposia have taken place in: Austria, Belgium, Canada, England, France, Germany, Guinea, Indonesia, Italy, Japan, Mexico, Portugal, Romania, Russia, Scotland, Singapore, South Africa, Spain, Switzerland, and USA. My Curriculum Vitae fully sets forth my educational background and experience and is annexed hereto as “**Exhibit A**”.

Basis for Opinions

10. The opinions I state in this Affidavit are based on my professional knowledge, education, training, and 40 years of research and field work with chimpanzees, as well as my knowledge of peer-reviewed literature about primatology published in the world’s most respected journals, periodicals and books that are generally accepted as authoritative in the field of primatology, many of which were written by myself and colleagues with whom I have worked for many years and with whose research and field work I am personally familiar. A full reference list of peer-reviewed literature cited herein is annexed hereto as “**Exhibit B**”.

Opinions

11. The chimpanzee (and its sister species, the bonobo) is more closely related to human beings than it is to the other African ape, the gorilla. Of all living organisms, these apes are

the ones with whom we last shared a common ancestor. Thus, the chimpanzee is humankind's closest living relative, and vice versa (Goodman, 1999).

12. Chimpanzees resemble human beings in physiological and anatomical ways. Their blood is interchangeable with human blood, such that a transfusion from a human being could save a chimpanzee's life (or vice versa), so long as the blood groups are properly matched (Segurel et al., 2012).

13. The volume of the brain of the chimpanzee is of comparable size to that of the most recent (but extinct) member of the human evolutionary lineage, *Homo floresiensis* ('The Hobbit') of Indonesia, which lived until as recently as 18,000 years ago (Brown et al., 2004).

14. Chimpanzees' performance on *intelligence* tests is equivalent to that of preschool-aged (3&4 years-old) children, especially in physical intelligence, i.e. object manipulation (Matsuzawa et al., 2006).

15. One of the most important indicators of intelligence in species, including chimpanzees, is the capacity for tool-making and use. Tool-making may imply complex problem-solving skills and an understanding of means-ends relations and causation, as it requires making choices, often in a specific sequence, towards a predefined goal, which is a key aspect of intentional action. Chimpanzees demonstrate intelligent tool-making and use in both nature and captivity, many examples of which are described in the following paragraphs. In nature they make and use tools of vegetation and stone in daily life for hunting, gathering, fighting, play, communication, courtship, hygiene and socializing (McGrew, 1992; 2010, 2013). Tool-making and use is a chimpanzee species universal, found in all populations studied over the long-term.

16. Chimpanzees make and use complex tools that require them to utilize two or more objects towards a single goal. An example is using one stone as a hammer and another as an anvil

for cracking hard nuts (Carvalho et al., 2009). Chimpanzees also make compound tools, in which two or more components are combined as a single working unit. Examples include the leaf sponge in which several fresh leaves are compressed into a single absorbent mass that allows water to be extracted from tree holes (Sousa et al., 2009), and, the wedge stone, in which chimpanzees insert a stone under an anvil to level its working surface to increase its efficiency (Matsuzawa, 1991). Composite tool use such as this is virtually unknown in other nonhuman species and reflects the fact that chimpanzees have the mental capacity to combine components of their environment in appropriate ways to attain a desired outcome. These capacities also involve making adjustments to existing circumstances in order to attain a goal and demonstrating that chimpanzees desire certain outcomes over others and work to achieve them.

17. Chimpanzees also use “tool sets,” which involve using two or more tools in an obligate sequence to achieve a single goal. For example, they have been known to use a set of five objects – pounder, perforator, enlarger, collector, and swab – to obtain honey (Boesch et al., 2009). This kind of sophisticated tool-use involves choosing the appropriate objects in a complex hierarchical sequence in order to obtain a goal which is kept in mind throughout the process. This kind of sequencing and mental representation is a hallmark of intentionality and self-regulation. And, chimpanzees have taken tool-making and use a step further into a realm previously thought to be unique to humans, that is, culture.

18. Culture is behavior that is learned socially (learned by watching others), is normative (represents something most individuals do), and collective (characteristic of a group or community) (McGrew, 2004). In other words, culture is a set of behaviors that is transmitted by social and observational learning (learning by watching others), which becomes characteristic of a certain group or population. Culture is a hallmark of human intelligence and is based on several

high-level cognitive capacities, including imitation (the direct mimicking of bodily actions), emulation (learning about the results of someone else's actions, then achieving those results in another way) and innovation (producing novel ways to do things and combining known elements in new ways) all of which chimpanzees share (see below).

19. Decades of observational field research in various locations in Africa have produced an overwhelming amount of evidence that wild chimpanzees possess different cultural traditions which they pass on from one generation to the next. These chimpanzee traditions meet the same criteria used to identify human culture. There are three general cultural domains found in humans and chimpanzees: 1) material culture, which is defined as the use of one or more physical objects as a means to achieve an end, 2) social culture, which is defined as behaviors that allow individuals to develop and benefit from social living, and 3) symbolic culture, which is defined as special communicative gestures and vocalizations which are only arbitrarily, i.e., symbolically, associated with certain intentions and behaviors (Whiten, 2011; McGrew, 2004).

20. With respect to the tool-making and using aspect of material culture, while all wild chimpanzees make and use tools, each chimpanzee group makes and uses a unique combination of tools known as a "tool kit." (McGrew, 1992, 2010; McGrew, Tutin and Baldwin, 1979). A chimpanzee tool kit is a unique set of about 20 different tools which are used for various functions in daily life. These include tools used for foraging and processing food, such as specialized sticks to open up termite mounds, stems used as probes in ant nests, sticks to get marrow out of the bones of dead animals, stone "hammer and anvil" to crack nuts, among a wide variety of others. Tools are also made and used for personal comfort and hygiene, including using leaves to clean the body, using certain stems to comb through hair, using sticks to clear the nasal passages and using a leafy twig to fan away flies, among many others. Tools also include those used for nest building (for

sleeping) which involve specialized ways of bending branches and sticks to make a comfortable and secure sleeping nest in the trees. These tool kits vary from group to group, are passed down by observing others performing the tasks and are found in a wide range of ecological locations, from savanna to rainforest. Tool-making is not genetically determined or fixed, that is, it is not “hard-wired” behavior or simple reflex. Rather, tool-making depends on the same mental abilities that underlie human culture – learning from others and making specific decisions about how to do things. Each chimpanzee group develops its own culture through its own behavioural choices. (McGrew, 1991, 2004; 2007; McGrew and Tutin, 1978; Schoening et al., 2008; Whiten, 2011 Whiten et al., 1999). The documented patterns of variation across chimpanzee groups are unique in the nonhuman animal world. Decades of field work show that there are at least 40 unique chimpanzee cultures spread across Africa. These cultures are made up of combinations of over 65 different identifiable behaviors. In addition to those already mentioned, these also include the ingestion of various plant materials for their medicinal properties as anti-bacterial agents and dewormers (Huffman et al., 1997).

21. Many of the tools in chimpanzee tool kits are not preserved in the archaeological record because they are made of organic materials that decompose over time, such as leaves, stems, bark, etc.. However, such chimpanzee stone tools as hammer and anvils are preserved in the archaeological record in the same way as are human stone tools. Therefore, chimpanzee stone artefacts have been compared with early human stone artefacts in terms of what they reveal about their comparative mental abilities. The foraging tool kits of some chimpanzee populations, such as in western Tanzania, are indistinguishable in complexity from the tools kits of some of the simplest material cultures of humans, such as Tasmanian aborigines (McGrew, 1987), and of the oldest known human artefacts, such as those of the Oldowan Industry discovered in East Africa

(Wynn and McGrew, 1998; Wynn et al. 2011). Dated chimpanzee stone artefacts that have been excavated from sites in West Africa show that there was once a chimpanzee “Stone Age” (just as there was a Stone Age for humans) that dates to at least 4,300 years ago (Mercader et al., 2002, 2007). The ages of the tools suggest that, in at least one population chimpanzee tool-making culture has been passed down for 225 generations (Boesch, 2012). These findings demonstrate that chimpanzee culture has very deep roots that predate the onset of settled farming villages and the invention of Iron Age technology in that part of Africa.

22. With respect to social culture, there are many social displays and social customs that chimpanzees pass down from one generation to the next (McGrew et al. 2001; Whiten et al. 1999). Examples include the famous “waterfall display” originally reported by Jane Goodall (1986). At a waterfall in the Gombe National Park, Tanzania, she observed male chimpanzees approach the waterfall and display in slow, rhythmic motion along the riverbed. For ten minutes or more, they pick up and throw rocks and branches, leap to seize hanging vines, and swing over the stream in the wind. Goodall refers to these purposeful displays as likely expressions of feelings of awe in the chimpanzees towards the waterfall. Another example is the social “rain dance”, which is a slow and deliberate pattern of rhythmic, bipedal locomotion at the start of rain performed mostly at the beginning of rainy season (Goodall, 1967). Another well-documented social custom is the grooming hand-clasp in which two chimpanzees clasp each other’s hands, raise those arms in the air, and groom each other with their free hand. This social custom was first observed in the Mabale Mountains of Tanzania (McGrew and Tutin, 1978) and occurs, with some variation, in certain locations and is completely absent in others (Nakamura and Uehara, 2004). This demonstrates the wide variability in social cultural expression across different chimpanzee groups.

23. The symbolic element that is key to human culture, is also found in wild chimpanzees. For instance, in one chimpanzee group arbitrary symbolic gestures are used to communicate desire to have sex whereas in another group an entirely different symbolic gesture is used to express the same sentiment (McGrew, 2011). The presence of symbolic culture in chimpanzees demonstrates that abstract concepts can be present without human language.

24. Comparisons between human and chimpanzee cultures demonstrate that the similarities are underwritten by a common set of mental abilities. The most important are imitation and emulation. Learning by observation is key to being able to imitate or emulate. Studies show that chimpanzees copy methods used by others to manipulate objects and use both direct imitation and emulation, depending on the circumstance (Horner and Whiten, 2005; Whiten et al., 2009). True imitation, which involves copying bodily actions, is an important hallmark of self-awareness because it suggests the individual has a sense of his own body and how it corresponds to someone else's body and that he can manipulate his body in accordance with the other's actions. There is ample evidence that, under the right circumstances, chimpanzees mimic the actions of others precisely, even mimicking the correct sequence of actions to achieve a goal (Buttleman et al., 2007; Whiten et al., 1996; Whiten et al., 2009). For instance, chimpanzees can imitate the actions of humans, or other chimpanzees, as well as the exact sequence of three actions in order to open up an "artificial fruit" to get a treat (Whiten et al., 1996). Chimpanzees may directly imitate someone else's way to achieve a goal when they have not yet figured out their own way to achieve the same goal. But, when chimpanzees already have the skills to complete a task they tend to emulate, not imitate (Horner and Whiten, 2005). These findings show that chimpanzees make choices about whether to directly copy someone else's actions based on whether they think they can figure out how to do the task themselves. Not only do chimpanzees imitate, but they know

when they are being imitated, and respond as young human toddlers do when they realize they are being imitated (Nielsen et al., 2005; Haun and Call, 2008). When imitated, both chimpanzees and young human children tend to “test out” the behavior of the imitator by making repetitive actions and looking to see if the imitator does the same. This behavior is similar to how chimpanzees and toddlers test whether an image in a mirror is herself. This action, called “contingency checking,” is another hallmark of self-awareness. In addition to being aware of being imitated and being able to imitate others, chimpanzees are capable of “deferred imitation,” that is, copying actions they’ve seen in the past (Bering et al., 2000; Bjorklund et al., 2000; Marshall-Pescini and Whiten, 2008). Deferred imitation relies upon even more sophisticated capacities than direct imitation because the chimpanzees must remember the past action of another while replicating those actions in real time.

25. Finally, all of these capacities for imitation and emulation are necessary for “cumulative cultural evolution.” This specific kind of cultural capacity, which is found in humans and chimpanzees, involves the ability to build upon the customs that came before (Nagel et al., 1993; Hirata and Mirimara, 2000; Myowa-Yamakoshi and Matsuzawa, 2000; Yamamoto, Humle and Tanaka, 2013). Moreover, chimpanzees, like humans, have a tendency to be social conformists (Whiten, Horner and de Waal, 2005), which allows them to maintain customs within groups. All of the evidence so far suggests a striking similarity between the mental capacities of humans and chimpanzees in the areas of observational learning, imitation (and thus self-awareness), decision-making, memory and innovation.

26. Chimpanzees appear to have moral inclinations and some level of moral agency, that is, they behave in ways that, if we saw the same thing in humans, we would interpret as a reflection of moral imperatives and self-consciousness. They ostracise individuals who violate social norms (Goodall, 1986). They respond negatively to inequitable situations, e.g. when offered

lower rewards than companions receiving higher ones, for the same task (Brosnan et al., 2005). When given a chance to play economic games (e.g. Ultimatum Game), they spontaneously make fair offers, even when not obliged to do so (Brosnan, 2013; Horner et al., 2011; Proctor et al., 2013; von Rohr, 2012).

27. Chimpanzee social life in nature is cooperative. They engage in collaborative social hunting, in which different individual hunters adopt different roles that increase the chances of success of the hunt. After the hunt, they share the meat from the prey gained (Boesch, 2012). Males cooperate in territorial defense, when they engage in risky boundary patrolling. Encounters with neighbouring males may be fatal, so that such cooperation may have life-or-death consequences (Mitani et al., 2010). These types of behaviors represent a purposeful and well-coordinated social system.

William C. McGrew

Sworn to before me
this 21st day of November, 2013

Curriculum Vitae
[pp. 408 - 434]**

This is "Exhibit A"
related to the Affidavit of
William C McGrew
Pete W. Nelson
2/7/13

Curriculum vitae: **WILLIAM CLEMENT MCGREW**

(March 2012)

Work Addresses: Department of Archaeology and Anthropology
University of Cambridge
Fitzwilliam St
Cambridge CB2 1QH, U.K.
Email: wcm21@cam.ac.uk

Corpus Christi College
Trumpington St
Cambridge CB2 1RH

Education

2009 Ph.D. in Biological Anthropology, University of Cambridge, England

1990 Ph.D. in Social Anthropology, University of Stirling, Stirling, Scotland
Thesis: *Chimpanzee Material Culture: Implications for Human Evolution*

1970 D.Phil. in Psychology, University of Oxford, Oxford, England
Thesis: *An Ethological Study of Social Behaviour in Preschool Children*

1965 B.S. (with Special Distinction) in Zoology, University of Oklahoma, Norman, USA

Awards and Honours

2012 Senior Fellow, McDonald Institute for Archaeological Research, Cambridge

2010 Distinguished Alumni Award, College of Arts and Sciences, University of Oklahoma

2008 Osman Hill Medal, Primate Society of Great Britain

2005 Fellow, American Association for the Advancement of Science

2003 Corresponding Fellow, Royal Society of Edinburgh, Scotland

1998 Prix Delwart, for Human Ethology and Cultural Anthropology, Fondation Jean-Marie Delwart and Royal Academy of Sciences of Belgium (\$10,000)

1996 W.W. Howells Book Prize in Biological Anthropology, American Anthropological Association

1995 Outstanding Research Award, Center for Research into the Anthropological Foundations of Technology, and Leighton A. Wilkie Memorial Lecture, Indiana University

Professional Training and Employment

- 2010
(Jul) Visiting Fellow, Hanse-Wissenschafts Kolleg, Delmenhurst, Germany
- 2009- Professor of Evolutionary Primatology, University of Cambridge
- 2005-09 Lecturer in Biological Anthropology, University of Cambridge
- 2008 Fellow, Corpus Christi College, Cambridge
- 2003
(Oct-Dec) Fellow, Collegium Budapest, Hungary
- 2003
(Jan-Jun) Visiting Bye Fellow, Selwyn College, and Visiting Research Fellow, Leverhulme Centre for Human Evolutionary Studies, University of Cambridge
- 2001
(Jul-Aug) Russell Trust Senior Research Fellow, School of Psychology, University of St. Andrews, Scotland
- 2001
(Jun) Visiting Professor, Ecole des Hautes Etudes en Sciences Sociales, College de France, Paris
- 1994-2005 Professor, Depts. of Anthropology and Zoology
Miami University
- 1994
(autumn) Visiting Professor, Dept. of Anthropology
University of California, Berkeley
- 1993-94 Wiepking Distinguished Professor, Depts. of Sociology & Anthropology, Psychology,
and Zoology, Miami University, Oxford, Ohio
- 1993
(spring) Visiting Faculty Member, Dept. of Biology
Earlham College, Richmond, Indiana
- 1989-92 Reader in Psychology, University of Stirling
- 1986
(autumn) Visiting Faculty Member, Depts. of Anthropology and Biology
University of New Mexico, Albuquerque
- 1982 Nuffield Foundation Social Science Research Fellow
- 1981-89 Senior Lecturer in Psychology, University of Stirling
- 1980
(autumn) Visiting Faculty Member, Dept. of Psychology
University of North Carolina at Charlotte
- 1974-81 Lecturer in Psychology, University of Stirling, Scotland
- 1972-73 Research Associate, Dept. of Psychiatry and Behavioral Sciences
Stanford University, and Gombe Stream Research Centre, Kigoma, Tanzania
- 1972 Visiting Investigator, Delta Regional Primate Research Center
Tulane University, Louisiana

- 1971 (summer) Participant in Wenner-Gren Foundation Field School in Primatology
Caribbean Primate Research Center, Cayo Santiago, Puerto Rico
- 1970-71 SSRC Postdoctoral Research Associate, Dept. of Psychology
University of Edinburgh, Scotland
- 1969-70 National Institutes of Mental Health Postdoctoral Fellow
Dept. of Psychology, University of Edinburgh
- 1968-69 Population Council Fellow, Dept. of Psychology, University of Edinburgh
- 1965-68 Rhodes Scholar, University of Oxford, Inst. of Experimental Psychology (66-68); Dept. of
Zoology (65-66)

Research Grants

- 2011 Emeritus Fellowship, "Chimpanzee Behaviour and Modeling Human Evolutionary Origins"
Leverhulme Trust, £22,000
- 2005 "Sex Differences in Faunivory of Wild Bonobos at Salonga," Leakey Foundation, \$14,500
(with L.F. Marchant)
- 2003-08 Revealing Hominid Origins Initiative," National Science Foundation, HOMINID program,
\$48,000 (sub-contract, PI: F. Clark Howell & T.D. White, Univ. California-Berkeley)
- 2000 "Savanna Chimpanzee Behavior and Ecology at Mont Assirik, Senegal," National
Geographic Society, \$7000 (with J.D. Pruetz)
- 2000 "Savanna Chimpanzee Density and Distribution at Mont Assirik, Senegal," Primate
Conservation, Inc., \$2500 (with J.D. Pruetz)
- 1999 "Sex Differences in Faunivory in Wild Chimpanzees at Mont Assirik, Senegal," L.S.B.
Leakey Foundation, \$13,000 (with L.F. Marchant)
- 1999 "Behavioral Ecology of Wild Chimpanzees at Mont Assirik, Senegal", Philip and Elaina
Hampton Fund, Miami University, \$6000 (with L.F. Marchant)
- 1996 "Behavior of Wild Chimpanzees in Tanzania: Handedness, Prehension and Object
Manipulation", Philip & Elaina Hampton Fund, Miami University, \$5961 (with L.F.
Marchant)
- 1995 "Comparative Research on Chimpanzees and Bonobos", Max-Planck-Gesellschaft,
D.M. 5000 (with L.F. Marchant)
- 1995 "Great Ape Societies", Publication grant, Wenner-Gren Foundation for Anthropological
Research, \$10,000 (with L.F. Marchant, T. Nishida).
- 1994 "Laterality of Function in Human and Nonhuman Primates", Max-Planck-Gesellschaft,
D.M. 7000 (with L.F. Marchant)
- 1993 "Laterality of Function in Traditional Human Societies", Max-Planck-Gesellschaft,
D.M. 12,000 (with L.F. Marchant)

- 1992 "Laterality of Limb Function in Wild Chimpanzees, Gombe, Tanzania", L.S.B. Leakey Foundation, \$7500 (with L.F. Marchant)
- 1981 "Cross-Cultural Study of Tool-use by Wild Chimpanzees", Science and Engineering Research Council, £11,859.
- 1979 "Ecology and Ethology of Four Sympatric Primate Species in Senegal, West African (Final Stage)", Science Research Council, £13,462.
"Chimpanzees in Senegal Using Tools to Obtain Termites", Leakey Foundation, \$1462.
- 1978 "Ecology and Ethology of Four Sympatric Primate Species in Senegal, West Africa (Supplement)", Science Research Council, £13,650.
- 1977 "Ecology and Ethology of Four Sympatric Primate Species in Senegal, West Africa", Science Research Council, £15,644.
- 1976 "Ecology and Behavior of Chimpanzees, West Africa", Wenner-Gren Foundation for Anthropological Research, \$1000.
"Ecology and Behavior of Wild Chimpanzees in Senegal, West Africa", Science Research Council, £4164.
- 1975 "Field Study of Wild Chimpanzees in Senegal", Carnegie Trust for the Universities of Scotland, £2000.
"Behavior and Ecology of Wild Chimpanzees in Senegal", Leakey Foundation, \$2000.

Plus 23 smaller grants totaling ca. \$16,000 awarded from 1974-2011 by American Philosophical Society, Boise Trust, British Council, Carnegie Trust for the Universities of Scotland, L.S.B. Leakey Trust, Royal Anthropological Institute, Royal Society, Royal Zoological Society of Scotland, University of Stirling, University of Cambridge.

Teaching

Semester courses taught (all or in part) at Earlham College (E) or at Universities of California (C), Cambridge (Cb), Stirling (S), New Mexico (NM), North Carolina at Charlotte (NC), or Miami University (M):

Apes & Human Evolution		Cb
Animal Behaviour		S
Avian & Mammalian Social Systems	(Graduate)	NM
Behavioral Ecology & Conservation Biology	(Graduate)	M
Behavioral Primatology		C, S
Cultural Primatology		Cb
Developmental Psychology		NC, S
Evolution of Human Behaviour	(Capstone)	M, S, NC
Evolutionary Medicine	(Graduate)	M
Heredity, Environment, & Human Society		M
The Human Animal	(Capstone, Honors Seminar)	M

Human Evolutionary Ecology	(Graduate)	M
Introductory Psychology		S
Foundations of Biological Anthropology		M
Mammalogy		M
Origins of Human Material Culture	(Graduate)	C, NM
Primate Behavior & Human Evolution	(Honors Seminar)	S, Cb
Socio-Ecology of Primates		M, E, Cb
Senior Seminar in Anthropology	(Capstone)	M

External examination of Ph.D.'s at the Universities of Birmingham, Reading, St. Andrews, Sheffield, Stirling, London (Birkbeck, UCL, Goldsmiths); M.Phil. (CNAAB) Birmingham Polytechnic; and M.Sc. at St. Andrews.

1992 Award from University of Stirling Teaching Fund: £1072 to develop new program of teaching practicals in Animal Behaviour.

Graduate Student Primary Supervision

Baldwin, P.J. Ph.D. 1979	The natural history of the chimpanzee (<i>Pan troglodytes verus</i>) at Mt. Assirik, Senegal.
Niemeyer, C.L. M.Sc. 1980	Interference in mating in the stump-tailed macaque (<i>Macaca arctoides</i>).
Harrison, M.J.S. Ph.D. 1982	The behavioural ecology of green monkeys, <i>Cercopithecus sabaesus</i> , at Mt. Assirik, Senegal.
Chamove, A.S. Ph.D. 1982	Development of aggressiveness in macaques.
Feistner, A.T.C. M.Sc. 1985	Food sharing in the cotton-top tamarin, <i>Saguinus oedipus oedipus</i> .
Williamson, E.A. Ph.D. 1988	Behavioural ecology of the lowland gorilla (<i>Gorilla g. gorilla</i>) in Gabon.
Brereton, A.R. Ph.D. 1988	Sexual interference in stump-tail macaques (<i>Macaca arctoides</i>): Is it return-benefit spite?
Hannah, A.C. Ph.D. 1989	Behavioural rehabilitation of laboratory chimpanzees in Liberia.
Price, E.C. Ph.D. 1990	Cooperative breeding in captive families of the cotton-top tamarin.
Moore, K. M.Sc. 1993	Dispersal and philopatry in captive cotton-top tamarins.

- Oberski, I. Grooming relations in captive chimpanzees, Edinburgh Zoo.
Ph.D. 1993
- Newing, H. Behavioural ecology of duikers (*Cephalophus* spp.) in forest and farmbush,
Ph.D. 1994 Tai, Cote d'Ivoire.
- Ham, R. Behaviour and ecology of grey-cheeked mangabeys (*Cercocebus albigena*) in the
Ph.D. 1994 Lope Reserve, Gabon.
- Hardie, S.M. Polyspecific associations of tamarins (Callitrichidae).
Ph.D. 1995
- Henry, M. Competition for resources between *Homo sapiens* and *Pan paniscus* in the Lomako
M.Sc. 1998 Forest of Zaire.
- Videan, E.N. Bipedality in bonobo (*Pan paniscus*) and chimpanzee (*Pan troglodytes*):
M.Sc. 2000 Implications for the origins of bipedalism in hominids.
- Videan, E.N. Chimpanzee nest-building and sleep: A model for the evolutionary origins of shelter.
Ph.D. 2005
- Persad-Clem, R. Adaptation of captive chimpanzees to free-ranging in a natural temperate environment.
Ph.D. 2009
- Smaers, J. Comparative socioecology of primate brain component evolution.
M. Phil 2006
- Koops, K. Elementary technology of foraging and shelter in the chimpanzees of the Nimba
Ph.D. 2011 mountains, Guinea.
- Phillips, C. Chimpanzee diet: Analyses at macroscopic, microscopic and molecular level.
Ph.D. 2012
- Stewart, F. The evolution of shelter: Ecology and ethology of chimpanzee nest-building.
Ph.D. 2011
- Carvalho, S. Evolutionary origins of technological behaviour: A primate archaeology approach to
Ph.D. student chimpanzees
- Bertolani, P. GIS-based study of chimpanzee ranging
Ph.D. student

Professional Societies (Offices Held)

American Association for the Advancement of Science	
Electorate Nominating Committee, Anthropology	2001-2004
Chimp Haven, Board of Directors	1999-2005
International Primate Protection League, Scientific Advisory Board	1977-

International Society for Human Ethology, Board of Trustees	1978-1982, 2005-
Primate Specialist Group-Africa	1985-
IUCN-SSC Primate Special Group, Sub. Comm. on Great Apes	2004-
Primate Society of Great Britain, Council	1985-1988
Working Party on Conservation	1979-1983
Royal Anthropological Institute, Council	1990-1992
Committee on Biological & Social Anthropology	1988-1991
Royal Zoological Society of Scotland, Council	1974-1978; 1990-1992
Executive Committee	1975
Animal Health and Management Committee	1974-1981

Editorial Boards

<i>American Journal of Primatology</i> , Consulting Editor	1991-1999
<i>Carnivore</i>	1978-1983
<i>Ethology and Sociobiology</i> , European Editor	1984-1992
Editorial Board	1994-1996
<i>Folia Primatologica</i>	1989-2009
<i>Human Ethology Newsletter</i> , Reviews Co-Editor	1982-1986
<i>Human Evolution</i>	1994-
<i>Human Nature</i>	1990-1996
<i>International Journal of Primatology</i>	1995-2000
<i>Journal of Human Evolution</i> , Assoc. Editor	1983, 1992-1995
<i>Man</i>	1987-1992
<i>Pan Africa News</i>	1997-
<i>Primates</i>	1985-

Reviewing of Grant Applications/Book Proposals/Manuscripts (cumulative)

Review Panel, Individual Research Grants, Wenner-Gren Foundation for Anthropological Research, 2004-2005
 Alexander von Humboldt Foundation, Association for the Study of Animal Behaviour, Bonobo Protection Fund, Cambridge University Press, Canada Council, H.F. Guggenheim Foundation, Harvard University Press, Japan Society for the Promotion of Science, L.S.B. Leakey Foundation, Leverhulme Trust, Charles & Anna Morrow Lindbergh Foundation, National Geographic Society, National Science Foundation (Anth., Psychobiol.), Primate Conservation Inc., Princeton University Press, Royal Anthropological Institute, School of American Research Press, Science & Engineering Research Council, W.H. Freeman, Wenner-Gren Foundation for Anthropological Research

Reviewing of Journal Manuscripts (cumulative)

African Journal of Ecology, American Journal of Primatology, American Journal of Physical Anthropology, American Naturalist, Animal Behaviour, Animal Welfare, Annals of Tropical Medicine & Hygiene, Behavioral and Brain Sciences, Behaviour, Biology Letters, Cambridge Archaeological Journal, Carnivore, Current Anthropology, Developmental Psychobiology, Ecology

and Evolution, Ecotopica, Ethology and Sociobiology, Ethology, Evolutionary Anthropology, Folia Primatologica, Geographica, Human Evolution, Human Nature, Intl Journal of Behavioral Development, Intl Journal of Primatology, Journal of Archaeological Science, Journal of Comparative Psychology, Journal of Human Evolution, Journal of Linnean Society of London, Journal of Royal Anthropological Institute, Laterality, Man, Nature, Oryx, Pan Africa News, Primates, Proceedings of the National Academy of Sciences USA, Proceedings of the Royal Society of London B, Quarterly Journal of Experimental Psychology, Science, Yearbook of Physical Anthropology, Zoo Biology.

Invited Lectures to National or International Meetings

- 2011 “Triangulating on Technology: Three Routes to Percussive Lithics in Primates”, podium presentation, Fourth Congress of European Federation for Primatology, Lisbon, PORTUGAL.
- 2011 “Unnatural Behaviour: Obstacle or Insight at the Species Interface?”, roundtable, ‘Humans and Other Apes: Rethinking the Species Interface’, New York, NY.
- 2011 “Memories of Gombe over Three Decades”, symposium, ‘An Oral History of Primatology at Cambridge’, Personal Histories Project, Cambridge.
- 2011 “Chimpanzees and the Last Common Ancestor”, Invited public lecture, Institute of Human Origins, Arizona State Univ., Tempe, AZ.
- 2010 “Fifty Years of Chimpanzee Tool Use: What’s Left to Know?”, lect., University of Oklahoma, USA
- 2009 “The First 4 Million Years of Human Evolution”, Royal Society, discussion meeting, London
- 2009 “150 Anos de Darwin: Evolucion futuro o crisis?”, CENIEH, Symp, Burgos, Spain
- 2009 “The Dawn of Language, Imagination, and Spirituality”, Templeton Foundation, symp., Cape Town, South Africa
- 2008 W.C. Osman Hill Lecture, Primate Society of Great Britain, London, U.K.
- 2008 “Origins of Percussive Technology”, Leverhulme Centre for Human Evolutionary Studies, symp., Cambridge, U.K.
- 2008 “Fest Conference for W. Schiefenhoevel”, Max-Planck-Gesellschaft, symp., Andechs, Germany
- 2008 “Human and Non-Human Ethology”, symp., Russian Academy of Sciences, Novosibirsk, Russia
- 2007 Belgian Group for Primatology, keynote lecture, Antwerp, Belgium
- 2007 7th Kongress der Gesellschaft für Anthropologie, plenary lecture, Freiburg, Germany
- 2007 “The Mind of the Chimpanzee,” Understanding Chimpanzees IV, symp., Chicago, USA
- 2007 James Drever Lecture, School of Psychology, University of Edinburgh, Scotland
- 2006 “Anthropology at UCL,” symp., University College London
- 2006 “Transcultural Universals,” symp., Wissenschaftskolleg, Delmenhorst, Germany
- 2006 “Bossou 30 Ans,” symp. Conakry, Republic of Guinea
- 2006 Journal of Anthropological Research Annual Lecture, Albuquerque, USA
- 2005 “Nature, Language, Culture: Learning from Animals?” symp., Essen, Germany
- 2005 “Chimpanzee Cultures,” Origins of Humans, San Diego, USA
- 2005 “Chimpanzee Material Culture,” Chacmool Conf., symp. Calgary, Canada
- 2004 “African Great Apes: Evolution, Diversity & Conservation”, symp., Kyoto University, Japan
- 2003 “Konrad Lorenz Symposium,” Ludwig-Maximilians-Universität, Munich, Germany
- 2003 “Konrad Lorenz Symposium 2,” Bucharest, Romania
- 2003 “International Primatological Conference,” Lisbon, Portugal
- 2002 “Evolution, Behaviour, Society,” Human Ethology Summer School, Pushchino, Russia
- 2002 “Production and Reproduction,” Southern California Primate Research Forum, Los Angeles, USA
- 2001 “Culture in Marine Mammals,” Biennial Marine Mammals Conference, Vancouver, Canada
- 2001 “Fluid Bread: Images and Usages of Beer in Crosscultural Perspective,” symp., International Commission for the Anthropology of Food, Seewiesen, Germany

- 2001 "Evolutionary Neighbors," symp., 4th International SAGA Forum, Okayama, Japan
- 2000 "The Social Brain: Evolution and Pathology", symp., Max-Planck Inst. Beh. Physiol., Bochum, Germany
- 2000 "Animal Social Complexity and Intelligence", symp., Chicago Acad. of Sci, Chicago, USA
- 2000 "Human Universals", symp., Hanse Wissenschaftskolleg, Andechs, Germany
- 2000 "Chimpanzee Cultures", exhibition, New Frontiers in Science 2000, Royal Society and Royal Society of Edinburgh, London and Edinburgh, UK
- 2000 "Behavioral Diversity in Chimpanzees and Bonobos", symp., Max-Planck Inst. Evolutionary Anthropol., Seeon, Germany
- 1999 "Evolution and Culture", symp., Fondation Fyssen, St. Germaine, France
- 1999 "Anthropology at the End of the Century", symp., Wenner-Gren Foundation, Cabo San Lucas, Mexico
- 1999 "Origins", symp., Living Links Center for Advanced Study of Human and Ape Evolution, Atlanta, USA
- 1999 "Primate Cultures", symp., Southern California Primate Research Forum, Los Angeles, USA
- 1998 "The Early Human Diet: The Role of Meat", symp., Wenner-Gren Foundation, Madison, USA
- 1998 "Hominid and Non-Hominid Primate Behaviour and Lifestyles", symp., Dual Congress of Int. Assn. Study of Human Palaeontology and Int. Assn. of Human Biologists, Sun City, South Africa
- 1998 "Evolving the Human Mind", symp., Hang Seng Centre for Cognitive Studies, Sheffield, UK
- 1998 "Primatology and Human Nature", roundtable, Dialogue between Science and Religion, Amer. Assn. Advancement Sci., Washington, USA
- 1997 "Human Evolution", symp., Cold Spring Harbor Laboratory, New York, USA
- 1997 "Exploring the Primate Mind", symp., National Zoological Park, Smithsonian Institution, Washington USA
- 1995 "Chimpanzee Behavioral Diversity", plenary lecture, Midwest Animal Behavior Conference, Oxford, USA
- 1994 "The Great Apes Revisited", symp., Wenner-Gren Foundation, Cabo San Lucas, Mexico
- 1994 "Anthropologie Heute", symp., Gesellschaft für Anthropologie, Potsdam, Germany
- 1992 "Ethological Roots of Culture", NATO Advanced Study Inst., Cortona, Italy
- 1991 "Great Apes of the World", symp., Orangutan Foundation International, Jakarta, Indonesia
- 1991 "Food and the Status Quest", symp., European Commission on the Anthropology of Food, Ringberg, Germany
- 1991 "Foraging Strategies and Natural Diet of Monkeys, Apes, and Humans", symp., Royal Society Discussion Meeting, London, UK
- 1991 "Understanding Chimpanzees II", symp., Chicago Acad. of Sci., symp., Chicago, USA
- 1990 "Tools, Language, and Intelligence: Evolutionary Implications", symp., Wenner-Gren Foundation, Cascais, Portugal
- 1988 "Tool-Use by Primates", symp., Fondation Fyssen, Versailles, France
- 1987 "Comparative Socioecology of Mammals and Man", symp., Brit. Ecological Society and Royal Anthropol. Inst., Durham, UK
- 1986 "The Pleistocene Perspective", symp., World Archaeology Congress, Southampton, UK
- 1986 "Understanding Chimpanzees", symp., Chicago Acad. of Sci., Chicago, USA
- 1986 "Fourth International Conference on Hunting and Gathering Societies", symp., London, UK
- 1985 "Primates", symp., British Social Biology Council, London, UK
- 1984 "The Sharing of Food", symp., Werner Reimers Stiftung, Bad Homburg, Germany
- 1980 "Nonhuman Primates in Biomedical Programs", symp., Humane Society of U.S.A., San Francisco, USA
- 1974 "The Great Apes", symp., Wenner-Gren Foundation, Burg Wartenstein, Austria
- 1972 "The Growth of Competence", Ciba Foundation, London, UK

Colloquia Given at Universities and Other Places (* = Multiple)

* Aberdeen, Alberta, * Andechs (Max-Planck), * Arizona State, Armstrong Atlantic, Basel, Bristol, Bucknell, Budapest, Buffalo, * California-Berkeley, California-Davis, California-Los Angeles, * California-San Diego, * Cal State-Fullerton, * Cambridge, Case-Western, Centenary, * Centre College, Charleston, Chester, Chicago Zool. Soc., Cincinnati, Colorado-Boulder, Colorado-Colorado Springs, Colorado-Denver, * Duke, Dundee, * Durham, * Earlham, * Edinburgh, Emory, Georgia, George Washington University, Glasgow, * Göttingen, Illinois, * Indiana, * Jersey Zoo, * John Carroll University, Kent, Kent State, Leipzig, * Liverpool, Manchester, * Miami (Ohio), Michigan, * Milano, Minnesota, Munich, * New Mexico, New York University, North Carolina-Charlotte, Ohio State University, * Oklahoma, * Oxford, Oxford Brookes, Pisa, Potsdam, Roma, * St. Andrews, South Carolina-Beaufort, Stanford, Southern California, * Stirling, Tennessee, * University College London, Utica, * Wisconsin, Wright State, * Zürich

Conference Organization

- 2012 "Insectivory", symposium, American Association of Physical Anthropologists, Portland, Oregon
 2011 "Lateral Thinking: The Evolution of Human Handedness", workshop, HWK, Delmenhorst, Germany
 2007 "Palaeoanthropology Meets Primatology," symposium, LCHES, University of Cambridge
 2005 "Primatology Meets Palaeoanthropology," workshop, Miami University, Oxford, Ohio
 1996 "*Cebus Meets Pan*," Symposium of International Primatological Society, Madison (with E. Visalbergh)
 1996 "Nesting and Resting in Primates", Symposium of International Primatological Society, Madison (with B. Fruth)
 1994 "The Great Apes Revisited", Wenner-Gren Foundation for Anthropological Research, Cabo San Lucas, Mexico (with T. Nishida)
 1992 "Scottish Conference on Animal Behaviour", Stirling
 1990 "Origins of Monogamy", Symposium of International Primatological Society, Kyoto
 1989 "Behavioural Ecology of Neotropical Primates", Meeting of Tropical Ecology Group, British Ecological Society, London
 "Weekend Workshop on Callitrichid Behavior", Scottish Primate Research Group, Stirling
 1988 "Tools Compared: The Material of Culture", Conference of Royal Anthropological Institute, London
 1985 "Scottish Conference on Animal Behaviour", Stirling
 1982 "Gorilla Ecology", Workshop of International Primatological Society, Atlanta
 1981 "Scottish Conference on Animal Behaviour", Stirling
 1980 "Primate Tool-Use", Satellite Symposium of International Primatological Society, Florence

Books

- 1972 McGrew, W.C. *An Ethological Study of Children's Behavior*. New York: Academic Press, 268 pp.

Published in The Child Psychology Series. Had positive reviews in *Nature*, *Science*, *Contemporary Psychology*, etc. Translated into Italian and Japanese.

- 1992 Nishida, T., McGrew, W.C., Marker, P., Pickford, M. & de Waal, F.B.M. (eds.) *Topics in*

Primateology, Volume 1. Human Origins. Tokyo: University of Tokyo Press, 475 pp.

- 1992 McGrew, W.C. *Chimpanzee Material Culture: Implications for Human Evolution.* Cambridge University Press, 277 pp.

Won the 1996 W.W. Howells Prize of the American Anthropological Association, for the best book of the year in biological anthropology. Had positive reviews in *Nature*, *Science*, *Scientific American*, *New Scientist*, *American Scientist*, as well as in popular press, e.g. *Economist*, *Times Higher*, and disciplinary journals, e.g. *Contemporary Psychology*, *Cambridge Archaeological Journal*. In its fourth printing, and translated into Japanese.

- 1994 Wrangham, R.W., McGrew, W.C., de Waal, F.B.M. & Heltne, P.G. (eds.) *Chimpanzee Cultures.* Cambridge, MA: Harvard University Press, 424 pp.

This edited volume received positive reviews in *Science*, *New Scientist*, *Science News*, *Ethology*, *Times Higher*, *Los Angeles Times*, etc. Went into paperback a year after publication.

- 1996 McGrew, W.C., Marchant, L.F. & Nishida, T. (eds.) *Great Ape Societies*, Cambridge: Cambridge University Press, 328 pp.

This edited volume received positive reviews in both general (*Nature*, *American Scientist*) and specialist (*American Zoologist*, *Evolutionary Anthropology*, *Man*) scientific journals, as well as the popular press (*BBC Wildlife*, *Times Higher*). In its third printing.

- 2004 McGrew, W.C. *The Cultured Chimpanzee: Reflections on Cultural Primatology*, Cambridge University Press, 248 pp.

Positive reviews in *Nature*, *American Scientist*, *Primates*, *American Anthropologist*, etc.

- 2010 Nishida, T., Zamma, K., Matsusaka, T., Inaba, A. & McGrew, W.C. *Chimpanzee Behavior in the Wild: A Visual Encyclopedia.* Springer Verlag, 255 pp.

Journal Articles & Book Chapters (refereed journal articles in bold)

1. 1969 McGrew, W.C. An ethological study of agonistic behaviour in preschool children.
In: *Proceedings of the Second International Congress of Primatology, Volume 1, Behavior*, Carpenter, C.R. (ed), Basel: Karger, pp. 149-159.
2. 1970 McGrew, W.C. Glossary of motor patterns of four-year-old children.
In: *Direct Observation and Measurement of Behavior*, Hutt, S.J. & C., Springfield, IL: Charles C. Thomas, pp. 210-218.
3. 1971 McGrew, W.C. & McGrew, P.L. Group formation in preschool children.
In: *Proceedings of the Third International Congress of Primatology, Volume 3, Behavior*, Kummer, H. (ed), Basel: Karger, pp. 71-78.
4. Hudson, P.T., McGrew, W.C. & McGrew, P.L. Attention structure in a group of preschool infants.

AFFIDAVIT OF
MATHIAS OSVATH

Index No.:

COUNTRY OF SWEDEN)
)
 PROVINCE OF Skåne) ss:
)
 MUNICIPALITY OF Lund)

Mathias Osvath being duly sworn, deposes and says:

Introduction and Qualifications

1. My name is Mathias Osvath. I received a PhD in Cognitive Science, with specialization in Cognitive Zoology from Lund University in 2010.
2. I submit this affidavit in support of Petitioners The Nonhuman Rights Project, Inc. ("NhRP"), on behalf of Kiko, for a writ of habeas corpus. I am a non-party to this proceeding.
3. I am a Cognitive Zoologist at Lund University in Sweden, a research fellow in the Department of Cognitive Science at Lund, and leader of the Cognitive Zoology Group at Lund. I am the scientific director of two research facilities for the study of animal cognition: Lund University Primate Research Station, and Lund University Corvid Cognition Station. I

am currently the main supervisor of two PhD-students in Cognitive Zoology. I am, and have been, teaching courses on graduate and post-graduate levels in Comparative Cognition, Animal Behaviour, Ethology, Methods in Cognitive Science, Neurocognition (mainly in different departments at Lund University, and at the Swedish University of Agricultural Sciences).

4. Apart from my work at Lund University I collaborate on different projects on animal cognition with colleagues at Oxford University, the Max Planck Institute and the University of Vienna.

5. I have been selected as one of 10 excellent young researchers of Lund University (the largest university in Northern Europe). The Swedish head of State, King Carl Gustav XVI, made an official visit to the primate research station I founded (and direct) to highlight its importance in Swedish cognitive research. I have received funding from several prestigious foundations including The Swedish Research Council, the Crafoord Foundation, in which I received the largest grant award in the Foundation's history for a regular science project, and The Royal Swedish Academy of Sciences.

6. I serve on various boards and groups at Lund concerned with the ethical treatment of animals in research. I have been on the faculty steering committee for the animal research facilities since 2007. I am often asked for advice and opinions by the Swedish Agricultural Board (which implements legislation on animal research). I have been a member of the research committee for the Swedish Zoo Association since 2009. I have sat on the board of the Jane Goodall Institute in Sweden since 2009. I am on the advisory board of Lund University's Institute for Advanced Studies. I sit on the editorial board of three international scientific journals: *Frontiers in Comparative Psychology*, *International Journal of Comparative Psychology* and *Animal Behavior and Cognition*.

7. I specialize in complex cognition, specifically mental representation and planning abilities, of great apes and corvids (crows). I have studied great apes in captivity with

controlled experiments and observations since 2004. I have worked with corvids both in captivity and in the wild since 2007. To my knowledge I am the only scientist who has created a research method for comparing distantly related, but cognitively similar, species (apes and corvids) in order to understand the principles of complex cognition.

8. I have written 16 peer-reviewed scientific papers and book chapters (and 17 conference abstracts). I am the sole or the first author for a majority of these. Two of my papers (published in *Current Biology* and *Animal Cognition*) are among the most highly cited papers in the animal behavior field (in the 98th and 99th percentile of citations since published). One of my findings on chimpanzee planning abilities was selected by *Discover Magazine* as one of the scientific breakthroughs of the year 2009 (and appeared at a similar list in *New Scientist*). I am routinely invited to contribute to special issues in various journals including *Philosophical Transactions of the Royal Society B*.

9. I regularly give talks in scientific contexts and for the public. I am often an invited speaker to national and international academic departments and conferences. Apart from Sweden, I have given talks (often several times in each country) in Denmark, Germany, Austria, Czech Republic, France, UK, USA and Japan. My research has made international headlines on the front pages of newspapers like *The Guardian* and *Le Figaro*. The news section of *Science* has twice reported on my findings. I have twice given interviews to North America's largest radio show on science, "Quarks and Quirks." In Sweden, my research has been the focus of several prime-time radio and TV documentaries. My scientific discoveries on great ape planning were the most covered (widely written about) news to come out of Sweden in 2009 and my findings became the largest international news from Sweden that year. I have also collaborated with *Animal Planet* and the *BBC* on documentaries on animal cognition and behavior.

Basis for Opinions

10. The opinions I state in this Affidavit are based on my scientific knowledge about chimpanzee cognition. In particular it is based on my expertise in great ape abilities to foresee potential future states, which is an area where I am regarded as among those with the foremost knowledge. A full reference list of peer-reviewed literature cited herein is annexed hereto as “Exhibit A”.

Opinions

11. Chimpanzees are, together with bonobos, our closest living relatives (Goodman, 1999) and, as such, we share an abundance of characteristics. We are not only similar in appearance and physiology but also in our emotions and our cognition. Each year the list of uniquely human cognitive abilities dwindles as we learn more about chimpanzees and other great apes. Many of the traits we consider to be characteristic of humans are those which define someone as an autonomous being or person. Likewise, chimpanzees and other great apes, share these capacities associated with autonomy. I will here focus on one major class of those key characteristics of autonomy which my colleagues and I have been studying in great apes for the last seven years: the ability to plan and remember from a first person perspective.

12. When we humans recollect a specific event or plan for a new situation, we use perceptual simulations, which enables us to experience these events mentally, i.e., with our “inner eyes and ears”. One can think of this ability as mental time travel. This skill is enabled through the episodic system, that is, memories for autobiographical events and foresights for personal situations, (Tulving, 1985). Tulving identified what he called *autonoetic consciousness* (which roughly means self-knowing consciousness) as a necessary correlate of the episodic system (Tulving, 1985). Put simply, without the understanding that you are an individual who exists through time you would not be able to recollect past events in your life and plan future events. Autonoetic consciousness gives an individual of any species an

autobiographical sense of a self with a future and a past. Chimpanzees and other great apes clearly possess an autobiographical self, as they are able to prepare themselves for future actions (e.g., tool use), even as much as a day in advance (Beran et al., 1999, 2004, 2012; Beran and Evans, 2009, 2012; Mulcahy and Call, 2006; Osvath and Osvath, 2008) and demonstrate a capacity for episodic memory. They can remember highly specific contextual elements, that is, the “what, where and when” of events when hours, weeks and even years have passed (Martin-Ordas et al., 2010; 2013).

13. In 2009, I published an observational study of one male chimpanzee in a zoo who prepared for future stone throwing at visitors (Osvath, 2009). The key findings in this study were that the chimpanzee collected and stockpiled stones at strategic places in his compound when he appeared completely calm, but when he used them later he was in an agitated state. The ability to plan for events where you are in a different psychological state from the current situation is regarded as a strong sign of an episodic system (e.g. Suddendorf and Corballis, 2007). In 2012 we conducted a follow-up study in order to get a more detailed understanding of the planning behaviour of this chimpanzee (Osvath and Karvonen, 2012). We found very complex behaviours not documented before. The chimpanzee engaged in deception for the future by constructing hides for his stone caches and by inhibiting his aggressive displays (which are tell-tale signs of upcoming throws). The key finding was that chimpanzees are not only able to prepare for an upcoming event, but are also able to mentally construct a new situation which will alter the future (in this case the behaviours of human zoo visitors).

14. Part of being an autonomous individual is self-control. Chimpanzees, like humans, can delay gratification for a future reward; they possess a high level of self-control under many circumstances (Osvath and Osvath, 2008). Self-control depends upon the episodic system. Basically, the perceptual simulations made possible by episodic memory function as a motivational “brake” on current drives in favour of delayed rewards (Boyer, 2008). The sensory

simulation evokes a motivation related to the simulated episode. This motivation competes with whatever other motivations were prior to the simulation. This brings the future into the present: for example, a choice between immediate and delayed satisfaction becomes a choice between two current motivations. It is a trick of the brain allowing for delay of gratification only available to humans and nonhumans with a sufficiently sophisticated sense of self and autobiographical memory. In a series of experiments we demonstrated that chimpanzees can disregard an immediate small piece of food in favour of a tool that would allow them to get a larger piece of food in the future. Chimpanzees can even select a tool which they had never seen before, but which function they could guess, and use it in the future on a reward apparatus. This ability to perceive the function of a novel tool in the future would be impossible without mentally representing the details of the future event (Osvath and Osvath, 2008). We have also shown that chimpanzees plan for future exchanges with humans (Osvath and Persson, 2013). Finally, chimpanzees will even use self-distraction (playing with toys) to cope with the impulse of grabbing immediate candies instead of waiting for more (Evans and Beran, 2007). In summary, chimpanzees can delay a strong current drive for a better future reward, generalize a novel tool for future use, select objects for a much-delayed future task, and do all of this while keeping in mind several different elements of a situation.

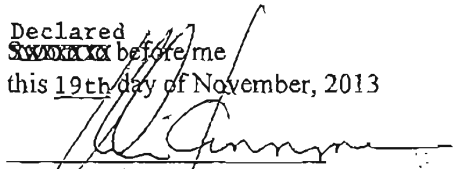

15. In addition to the behavioural studies there are also neurobiological findings showing that the chimpanzee brain is activated in the same areas and networks as the human brain during activities associated with planning and episodic memory (Rilling et al, 2007). These findings support the behavioral and cognitive evidence for an autobiographical self in both humans and chimpanzees.

16. When taken together, these studies, as well as other reports on chimpanzee behaviour in the wild, leave little doubt that chimpanzees possess an episodic system similar to humans. Chimpanzees have a self-concept and are aware of their personal past and see a

personal future ahead of them. This also means that they can re-experience past pains and pleasures as well as anticipate such emotions. This in turn implies that they likely can, just as humans, be in pain over an anticipated future event that has yet to occur. For instance, confining someone in a prison or cage for a set time, or for life, would lose much of its power as punishment if that individual had no self-concept. Every moment would be a new moment with no conscious relation to the next. But, chimpanzees and other great apes have a concept of their personal past and future and therefore suffer the pain of not being able to fulfill one's goals or move around as one wants; like humans they experience the pain of anticipating a never-ending situation.

Affidavit of Emily Sue Savage-Rumbaugh, sworn to November 22, 2013

[pp. 450 - 466]

STATE OF NEW YORK
SUPREME COURT COUNTY OF NIAGARA

In the Matter of a Proceeding under Article 70 of
the CPLR for a Writ of Habeas Corpus,

THE NONHUMAN RIGHTS PROJECT, INC.,
on behalf of KIKO,

Petitioners,

v.

CARMEN PRESTI, individually and as an officer
and director of The Primate Sanctuary, Inc.,
CHRISTIE E. PRESTI, individually and as an
officer and director of The Primate Sanctuary, Inc.,
and THE PRIMATE SANCTUARY, INC.,

Respondents.

AFFIDAVIT OF
EMILY SUE SAVAGE-
RUMBAUGH

Index No.:

STATE OF IOWA)
) ss:
COUNTY OF Polk)

Emily Sue Savage-Rumbaugh, being duly sworn, deposes and says:

Introduction and Qualifications

1. My name is Emily Sue Savage-Rumbaugh. I received a B.A. in Psychology from Southwest Missouri University in 1970, a M.S. in Psychology from University of Oklahoma in 1975, and a Ph.D. in Psychology from the University of Oklahoma in 1975. I have been awarded honorary Ph.Ds by the University of Chicago in 1997, and Missouri State University in 2008. I work and reside in Des Moines, Iowa.

2. I submit this affidavit in support of Petitioners The Nonhuman Rights Project, Inc. ("Nhrp"), on behalf of Kiko, for a writ of habeas corpus. I am a non-party to this proceeding.

3. I am currently the Director Emeritus of the Iowa Primate Learning Sanctuary. I previously served as (in reverse chronological order): (1) an Affiliate Professor at Iowa State University, Simpson college for seven years; (2) a Professor, an Associate, and an Adjunct Professor in the Department of Biology & Psychology at Georgia State University over the course of 25 years; and (3) an Associate Research Professor, Assistant Research Professor, and Research Associate at the Yerkes Primate Research Center at Emory University over a 12 year period. I have regularly taught classes in primate behavior, evolution of innate behaviors, evolution of learned behavior, learning theory, developmental psychology, biology, psychobiology of language, socio-biology, and introductory ethology.

4. During my career I have received 16 awards from a variety of academic, research, nongovernment, media, and professional organizations. Some of the more notable include: (1) one of the most 100 influential scientists in the world by *Time Magazine* in 2010; (2) selection by the Millennium Project for inclusion on the 100 most influential works in cognitive science in the 20th century for my book titled, "Language comprehension in ape and child," (1993, Monographs of the Society for Research in Child Development); (3) a Fellow at the American Psychological Association; and (4) a Woodrow Wilson Fellow (1970-1975).

5. I am affiliated with a number of professional organizations including: (1) the International Primatological Society; (2) the American Psychological Association; and (3) the American Psychological Association. During the course of my career, I have also received numerous research grants including grants from: (1) National Institute of Child Health and Human Development; (2) Biomedical Research Support Grant, Emory University; (3) World Wildlife Fund; and (4) The Templeton Foundation.

6. My research specialization is in the study of the language learning and cognition of chimpanzees and bonobos. I began studying the cognitive processes and linguistic behavior in captive chimpanzees in 1971. From 1972 to 1975, I conducted captive studies of mother-infant groups of chimpanzees. From 1975 to 1976, I studied the social behavioral of *Pan paniscus* and *Pan troglodytes*. Following that, I spent 13 years (between 1976-1989) conducting studies of symbolic and cognitive processes in *Pan paniscus*, *Pan troglodytes*, and ailinguistic *Homo sapiens*. In 1993, I spent a year studying free-ranging bonobos. From 1989 until present, I have studied the lexical and vocal linguistic ability, musical ability, tool manufacturing ability and general cognitive development of apes, with a specific focus on bonobos.

7. I have written or co-authored seven books, the most relevant include: (1) *Ape Language: From Conditioned Response to Symbol* (1986, New York: Columbia University Press); (2) *Kanzi: A Most Improbable Ape* (1993, NHK Publishing Co: Tokyo, JAPAN); (3) *Kanzi: The Ape at the Brink of the Human Mind* (1994, New York: John Wiley Publishers); (4) *Apes, Language, and the Human Mind* (1998, New York, NY: Oxford University Press); and (5) *Kanzi's Primal Language: The cultural initiation of apes into language* (2005, London: Palgrave/Macmillan). I have also appeared in five films on chimpanzees and apes, three NHK network (Japan) specials and one BBC special.

8. I have published 181 articles on the learning capability, behaviour, ecology, welfare, or conservation of chimpanzees, monkeys, and baboons. These articles are published in many of the in the world's most-cited peer-reviewed scientific journals, including: *Science*, *American Journal of Primatology*, *Folia Primatologica* (the official journal of the European Federation for Primatology), *International Journal of Primatology*, *Journal of Comparative Psychology*, *Journal of Human Evolution*, *Behavioral and Brain Sciences*, and *Journal of*

Experimental Psychology, Journal of Biology and Philosophy. I have also published in *Proceedings of the Fifth International Congress of Primatology, Proceedings of the Sixth International Congress of Primatology, Contemporary Primatology, Encyclopedia Americana, Collier's Encyclopaedia, Encyclopaedia Britannica Yearbook, The Cambridge encyclopaedia of human evolution* and *Encyclopaedia of Neuroscience*. Specific topics of these publications include: the use of symbolization and language by chimpanzees, group formation among captive mother-infant chimpanzees, human-oriented courtship behavior in a human-reared chimpanzee, mothering behavior towards a kitten by a chimpanzee, play and socio-sexual behaviour in chimpanzees, chimpanzee communication, chimpanzee tool use, chimpanzee cognition, chimpanzees and protolanguage, primate intelligence, chimpanzee counting, communicative intentionality in the chimpanzee, the relationship between language in apes and human beings, summation in the chimpanzee, care of captive chimpanzees, imitation by an ape, grammatical development by an ape, the invention of protogrammar by an ape, imitative learning in chimpanzees, delay of gratification in chimpanzees, spontaneous logicomathematical constructions by chimpanzees, primate geometry, and ape consciousness.

9. I regularly give invited lectures and take part in international symposia on primatology, which I have done since 1978. In the United States, I have given lectures at Columbia University, Emory University, Princeton University and the University of Chicago, among many other notable educational institutions. I have also given lectures and presentations on primates in other countries including: England, Japan, Canada, Germany, Australia, Portugal, France, Mexico, Sweden and Berlin. My Curriculum Vitae fully sets forth my educational background and experience and is annexed hereto as "Exhibit A".

Basis for Opinions

10. The opinions I state in this affidavit are based on my professional knowledge, education, training, research and field work, as well as my review of peer-reviewed literature. A full reference list of peer-reviewed literature cited herein is annexed hereto as “Exhibit B”. In addition, the opinions set forth herein are based on many years of collaboration and research with my colleague, Duane Rumbaugh. Professor Rumbaugh and I have designed and implemented research experiments together in a joint laboratory and have co-authored numerous peer-reviewed articles.

Opinions

11. Chimpanzees share about 99% of our DNA (Wildman and Goodman 2002; Wildman, Grossman, and Goodman, 2003; The Chimpanzee Sequencing and Analysis Consortium 2005). This exceptionally high degree of genetic relatedness between chimpanzees and humans cannot, by itself, ensure that chimpanzees possess any specific human abilities. It is however, the single most important piece of scientific evidence to date regarding chimpanzee potential. It indicates that when behavioral studies of chimpanzees suggest that they are capable of self-aware conscious action, the capacity to reason and think, the ability to acquire symbolic language, there is reason to take these results seriously. It also ensures the following:

- a. Chimpanzee brain and behavior, like human brain and behavior, are, flexible and nearly completely dependent upon learning (Norman, 2002).
- b. Social and physical environment during prenatal, post-natal and childhood development plays a critical role in the development of adult cognitive capacities in the chimpanzee (Stern, D. 1971; Stern, D. 1977; Acqarone, 2007).

- c. Early mother/infant behavioral rearing trajectories are the single most important factor in determining manifestation of higher order cognitive capacities and conscious reflective capacity in adult chimpanzees (Trevathan, 1978; Trevathan, 1998; Brakke and Savage-Rumbaugh, 1999). When behavioral studies present differing assessments of chimpanzee cognitive capacities, differing early experience are the most probable cause (Greenfield, Maynard, Boehm, Schmidting, 2000; Greenfield, Lyn, and Savage-Rumbaugh; 2006. Greenfield, Lyn, Savage-Rumbaugh, 2008; Greenfield, 2009).
- d. That chimpanzees, like us, will manifest a developmental program that is designed to allow for the manifestation of increasing levels of consciousness awareness and self-understanding throughout adulthood, through culture and learning (Greenspan, 2004, Rumbaugh, D. M. & Savage-Rumbaugh; 1996). That significant behavioral plasticity present in both humans and chimpanzees means that the “normal” characteristics of any conscious self-aware individual (chimpanzee or human) will not manifest in an identical manner in every member of that species (Kellogg and Kellogg, 1933; Kitcher, 2006; Savage, Temerlin, and Lemmon 1973; Savage, 1975; Savage-Rumbaugh, 1984).
- e. That, under natural conditions, chimpanzees will develop and utilize self-awareness, self-agency and intelligence to survive (Wrangham, 2009; Muller and Wrangham, 2009; Nishida, Zamma, Matsusaka, T., Inaba, McGrew, W.C., 2010, Goodall, 1986).
- f. That chimpanzees, in natural conditions, will come to employ cause-effect reasoning to construct an understanding of their environment (Boesch, 2000,

2009; 2012; Savage-Rumbaugh, 1990; Rumbaugh and Washburn, 2003). They will also construct a social structure that is rule-based, conscious and successful thereby allowing them to survive as group, by virtue of culture, not by natural instinct (Nishida, 1968; 1970, 1979; Sugiyama, 1968, 1969, 1973a,b, 1981; Telekia, 1973; McGrew and Tutin, 1973; Tuttle, 1986; Preutz, 2002). Their DNA provides a neural basis for learning, but very few innate patterns of reaction to specific environmental stimuli (Tutin, 1975)

12. No design differences have been discerned between the structure of chimpanzee and human brains (Passingham, 1982; Passingham and Etlinger, 1974).

13. Broca's Area and Wernicke's Area are regions in the brain that enable symbolic communications. The areas that correspond to Broca's Area and Wernicke's Area in chimpanzees correspond to those parts of the brain that enable their symbolic communications (Passingham, 1981).

14. In our laboratories, Professor Rumbaugh and I have demonstrated that chimpanzees reared early on in rich social linguistic worlds come to use geometric symbols (i.e. circles, squares, etc) the way we employ printed words (Rumbaugh, Gill, and Von Glasersfeld, 1973, Rumbaugh, 1977; Rumbaugh, 2013; Rumbaugh and Washburn, 2003). These chimpanzees are not reared in impoverished circumstances or social isolation. They have peers as well maternal and paternal familial social attachments. The various geometric symbols serve as words to them, and to the humans communicating with them (Savage-Rumbaugh, 1986; 1994).

15. The more learned amongst them can discuss social situations with each other and with those human researchers if the researchers attend to and understand their nonverbal

linguistic abilities. (Menzel, 1999). For example, they are capable of telling the researchers where they want to go, who they want to be with, the foods they want to eat (see Kanzi.bvu.edu). Those who comprehend spoken English, can communicate even more complex things, as long as the researchers are willing to patiently inquire and listen to their “yes/no” answers. They can answer yes/no questions about their inner most thoughts, plans, feelings, intentions, dislikes and likes if they trust the researcher and believe that this knowledge will not be employed against them (NHK, unpublished footage). They can also answer questions about the likes and dislikes of their companions and will tell researchers what other apes, who cannot comprehend English, want and/or think (Savage-Rumbaugh, 1986; Savage, 1975).

16. Chimpanzees can recognize themselves in mirrors and on television and use a flashlight to examine the interiors of their own throats. (Savage-Rumbaugh, 1986). Panzee, a chimpanzee reared with humans and bonobos, evidenced a sense of self and passed the mirror recognition test at 6 months of age. They demonstrate that they can recognize themselves in photos, videos, and masks ((Menzel, Savage-Rumbaugh, and Lawson, 1985; Savage-Rumbaugh, 1986). As adults they continue to recognize pictures of themselves and others, when they were children (Personal observation, Beran, SavageRumbaugh, Brakke, Kelley, & Rumbaugh, 1988; Beran, Pate, Richardson, & Rumbaugh, 2000). This capacity to “step-outside” the self and reflect upon ones own behavior, as one might reflect on the behavior of another- allows one to become the objects of one’s own thought. This capacity is at the root of human cultural, linguistic and moral systems (Savage-Rumbaugh and Hopkins, 19896; Savage-Rumbaugh, and Rumbaugh, 1998). Between the ages of two and three, chimpanzees are capable of deception. (Savage-Rumbaugh and McDonald, 1988). By three, they enjoy hiding games and can hide for as long as several hours without moving, even as researchers pass close by searching for them. By

adulthood, this capacity is translated into long planned stealthy raids on neighboring rival groups (Boesch, 2000, 2012).

17. Chimpanzees have demonstrated that they have intentions. They employ symbols to express themselves (Savage-Rumbaugh, 1986; Kanzi.bvu.edu). They do not simply respond to stimuli nor do they use symbols or signs as tricks to gain rewards. They are able to state what they are going to do, in advance of acting, then carry out their stated action. Thus their statements of intent match their actions. Examples include statements made by two language-trained chimpanzees, Sherman and Austin, who told each other the foods they were intending to share and told experimenters which items they were going to give to them (Savage-Rumbaugh, Shanker, Taylor, 1996).

18. With the emergence of the ability to state their intentions, Sherman and Austin also revealed that not only did they recognize and understand differential knowledge states between themselves, but they that language allows separate beings to bring their different knowledge states into accord with their own imminent intentions and thus to plan co-actions (Savage-Rumbaugh, Shanker and Taylor, 1998). For example, Sherman and Austin began to say 'Go outdoors' and then to head for the door, or 'Apple refrigerator' and then take an apple from the refrigerator (rather than any of the other foods that were located in the refrigerator). These were not requests, but statements of intent. When they reliably told human beings what they were going to do, the humans did not have to wonder where they were headed. This gave them an independence of action and social freedom that can only be developed within a language-based society (Greaves, Bensen, Tagliatela, Thibault, 2005)

19. The chimpanzees Sherman and Austin began (on their own and without training) to use symbolic means to co-ordinate their intended behavior with that of others by explaining

what they were going to do before they did so. In order to be able to produce statements about intended action, for the purpose of co-coordinating future actions with others, one must be able to form a thought and hold it in mind until agreement is reached between two parties. Coordinated actions can then take place between two sentient minds, because both have come to an agreement prior to action.

20. Chimpanzees demonstrate that they have learned symbols for hundreds of items, events and locations. They remember these symbols for decades, and learn new symbols without being taught, but by observing others use them (other apes or humans.) They can master syntax. There is no essential difference between what words chimpanzees learn mean to them, and what words humans learn mean to them.

21. Chimpanzees spontaneously begin comprehending both lexigrams and human speech, and not merely single words, but the specifics of hundreds of novel requests, and the understanding of conditional clauses. For example, the first time Panzee was told that there was a "Gorillas hiding just ahead in the woods" her hair immediately became erect and she began to walk with careful stealthy footsteps while looking cautiously for a gorilla. The first time she was told "If you will share your cereal with Sherman, you can have some more" -- she walked over to Sherman's cage and pushed her box of cereal it toward him. Another example was the understanding of such novel sentences as "If you hold still, I can put your backpack on." Conditional (if/then) relationships make up a very large portion of language use. Once children understand if/then linguistic structures almost anything can be negotiated linguistically, than through physical action.

22. Chimpanzees grasp the elements of language. For example, one day a human named Tim was standing outside the room of Lana, a language-trained chimpanzee, while

drinking a coke. Lana had learned the word for "coke," but had previously employed the word only in the context of obtaining coke from her vending machine, by using the stock sentence "Please machine give coke." She had never used the word "coke" in any other way or in any other sentence. One day there was no coke in her vending machine. She saw Tim standing outside drinking his own coke and she wanted one. She had learned the stock sentences "Tim give Lana this drink," and "Lana move out of room." Suddenly -- with no demonstration -- she formed the novel utterance "Lana drink this out of room?" Elements of all of these different stock phrases were thereby recombined to form the appropriate new sentence "Lana drink this out of room?" in a meaningful novel sentence. In order to test if this was an accident, the following day Tim intentionally repeated the behavior of drinking a coke outside of her room. This time Lana asked, "Please Lana drink coke this room." This was a slightly different utterance, but with a similar meaning and grammatically correct form. It indicated that Lana possessed a linguistic flexibility far beyond any sentences she had been taught and that she recognized many different types of utterances could be used to convey the same message. This is one of hallmarks of language, i.e. there is not one-to-one relationship between utterances and events. Instead there is an infinite array of flexible ways of communicating the same or similar things with just slight changes in meaning. In this case, her second novel utterance made clear WHAT it was that Lana wanted to drink, as Tim had a look on his face that very "official experimenter" oriented. (The previous day he had just been drinking a coke not doing a specific test.) Lana also added the polite function of "Please" -- again showing sensitivity to the difference in Tim's mood which she read from his face and body language.

23. When Sherman and Austin communicated with each other, a variety of spontaneous communicative gestures arose to augment their symbolic communication (Savage-

Rumbaugh, Rumbaugh, and Boysen, 1978). These gestures indicated that they paid close attention to the visual regard of the other. For example, if Austin were looking away when Sherman selected a symbol, Sherman would wait until Austin looked back. He would then point to the symbol he had used. If Austin still hesitated, Sherman would point to the food that the symbol symbolized (Savage-Rumbaugh, 1986; Kanzi.bvu.edu). If Austin's attention wandered even more, Sherman would take Austin's head and turn it toward the keyboard. If Sherman were not attending to Austin's request, Austin would gaze steadfastly at the symbol until Sherman took note. They recognized that the speaker had to monitor the listener, watch what he was doing and make judgments about his state of comprehension. Depending upon these judgments, the speaker had to decide how to proceed with conversational repair.

24. Sherman and Austin also invented an elaborate and highly sophisticated and creative rule-based system for intra-species gaze, symbols, body posture, head movements and gestures (kanzi.bvu.edu; Savage-Rumbaugh, Rumbaugh, Boysen, 1979).

25. Chimpanzees announce what that they are about to do, where they are going, what assistance they want from others, and how they feel (Savage-Rumbaugh, Romski, Sevcik and Pate (1983)). They announce what they are going to retrieve from an array of objects that they've seen in another room (Savage-Rumbaugh, Pate, Lawsen, Smith and Rosenblum, 1983). They announce that they have seen important social events such as when they have seen another chimpanzee that has been anesthetized rolled by on a cart (this is extremely upsetting to them), or when they see that a gorilla has attacked another chimpanzee on television (Savage-Rumbaugh, Scanlon and Rumbaugh, 1980; Personal observation).

26. Chimpanzees accomplish "cross-modal perception". This means that they can take in information in one modality such as vision or hearing, and can internally translated to

information in another modality. They can also take in symbolically encoded information and translate it into any non-symbolic mode. For example when shown a picture of an object, they can retrieve that object by touch alone. They can also retrieve the correct object by touch when shown only the symbol representing that object (Savage-Rumbaugh, Hopkins, and Sevcik, 1988).

27. Chimpanzees recount what happened yesterday to an otherwise unknowing listener. For example -- if Panzee saw food hidden in a particular location, she can tell someone who has no idea where it is, how to go the place even though the original hiding was one, two, three, four or five days later (Menzel, 1999). Chimpanzees identify hidden items by name and, at times, state that it is covered with leaves and sticks (Menzel, 1999). Chimpanzees direct a human to a specific spot to retrieve the item through the orchestrated use of their lexigrams, vocalizations, pointing, and affective behaviors, such as facial expression. As the person being directed to a hidden item gets close, Panzee will smile, nod her head, produce breathy panting laughter -- etc. -- all with deliberate intent. Chimpanzees then celebrate when food is retrieved. They do so by giving loud pant hoots, rushing around in circles, hugging each other, and walking upright -- much like people act just after their team wins a close football game. (Personal observation). They also celebrate when they anticipate that they are, at last, successfully solving a computer task (by giving high pitched screams followed by pant hoots, hugging the experimenter and sometimes slapping themselves in joy) (Personal Observation).

28. Chimpanzees almost instantaneously distinguish relative masses and amounts (Rumbaugh, Savage-Rumbaugh, and Hegel, 1987; Rumbaugh, Savage-Rumbaugh, and Pate, 1988).

29. Chimpanzees have been taught the principle of number lines, cardinality and numerosity. They have counted as high as 21. (Unpublished data, Savage-Rumbaugh; Rumbaugh 2003; Rumbaugh, Hopkins, Washburn, and Savage-Rumbaugh, 1989).

30. Chimpanzees engage in mediational learning (Meador, Rumbaugh, Pate, Bard, 1978). They are able to “figure out” rules that allow them to solve new problems -- based on past information which they collate over multiple trials and reflect upon. This requires an ability to compute relationships among a variety of things and events. They understand they are positing predictive or cause-and-effect relationships about tasks they work on, and that they have control over what they do and what will happen (Rumbaugh, 1971; Rumbaugh and McCormack, 1969; Savage-Rumbaugh, 1990).

31. Chimpanzees use their imagination to engage in pretend-aggression and other forms of pretend. Sherman delighted in pretending that a King Kong doll was biting his fingers and toes. He would startle his caretakers by pretending to be in pain as he poked a needle in his skin and out the other side, being careful to just pierce the out layer of skin which was rather thick and which perhaps was not very painful. It looked awful to his caregivers, and he took great delight in the reactions his teasing provoked in his caretakers. He thought this so much fun that he began to try this trick in other locations around his body to see where he would get the greatest reaction for the caretakers (Kanzi.bvu.edu, personal observation).

32. Chimpanzees demonstrate, as did Lana in our laboratory, that she had a theory of mind, that she knew she had a mind, that she knew that a human had a mind, and that she knew that her mind and state of knowledge differed from that of the human. She believed that others had minds, thoughts, intentions, feelings, needs, desires, and intentions (Rumbaugh, 1977, in preparation, Rumbaugh 2013). Similarly, Sherman and Austin were presented with the need to

give each other specific information about the nature of 14 hidden foods. Only Sherman knew the contents of the container. It was his job to tell Austin, in whatever way he could, the name of the hidden food. It was Austin's job to translate this information back into geometrical symbols request. They were not shown how to do this, they were merely provided with the means to do so as the food trademarks were left on the floor in Sherman's room. The task required that they recognize that labels such as 'Coca Cola' and that 'M and M' were symbols. That Austin could understand the information Sherman was trying to convey even though neither had employed such trademarks as symbols ever before in their lives. This task was essentially a version of "mind-reading" tasks in which one chimpanzee has knowledge that another does not have. Both Sherman and Austin used these food labels, from the first trial, to tell the other individual the type of food that was hidden in the container. They then were asked to change roles and continued the successful symbolic informational exchange, again without making any errors at all (Savage-Rumbaugh, 1986). The uses that chimpanzee's make of language are very similar to those that humans employ, in that tend to give "new information" and/or to speak about things that are not obvious are given from the context alone. They focus on things that they logically assume the listener will not know. Young children employ language in a similar way. Thus the manner and mode of their language use itself indicates that they have a "theory of mind concept," that is, they believe other individuals have minds with content and that such content often differs. Language is a means to bring content into alignment in a manner that is beneficial to speaker and listener, allowing them to coordinate their behavior (Greenfield and Savage-Rumbaugh, 1984).

33. Chimpanzees are able to use symbols to communicate wishes, desire, needs, abstract information and sometimes secrets to one another. They tell each other what foods

experimenters have hidden in containers or in other rooms, what tools are needed to open containers, and locations where food has been left. They show each other how to use tools and they tell each other "new words" that they have assigned to objects that did not have names before (Savage-Rumbaugh, 1968; Savage-Rumbaugh, Rumbaugh, and Boysen, 1978a; Savage-Rumbaugh, Rumbaugh, and Boysen, 1978b).

Emily Sue Rumbaugh
 Emily Sue Savage-Rumbaugh

Sworn to before me
 this 22nd day of November, 2013

Krista L. Magill
 Notary Public

STATE OF Iowa)
) ss:
 COUNTY OF Polk)

On the 22nd day of November in the year 2013 before me, the undersigned, a notary public in and for said state, personally appeared Emily Sue Savage-Rumbaugh, personally known to me or proved to me on the basis of satisfactory evidence to be the individual whose name is subscribed to the within instrument and acknowledged to me that he/she executed the same in his/her capacity, and that by his/her signature on the instrument, the individual, or the person upon behalf of which the individual(s) acted, executed the instrument, and that such individual made such appearance before me the undersigned in the County of Polk and the State of Iowa.

Krista L. Magill
 Notary Public

My Commission Expires: 6.25.16

STATE OF NEW YORK
SUPREME COURT COUNTY OF NIAGARA

In the Matter of a Proceeding under Article 70 of
the CPLR for a Writ of Habeas Corpus,

THE NONHUMAN RIGHTS PROJECT, INC.,
on behalf of KIKO,

Petitioners,

v.

CARMEN PRESTI, individually and as an officer
and director of The Primate Sanctuary, Inc.,
CHRISTIE E. PRESTI, individually and as an
officer and director of The Primate Sanctuary, Inc.,
and THE PRIMATE SANCTUARY, INC.,

Respondents.

Index No.:

STATE OF IOWA)
) ss:
COUNTY OF POLK)

1. This Certificate of Conformity is submitted pursuant to New York CPLR 2309(c)
and New York Real Property Law § 299-a.

2. I am an attorney duly licensed to practice law in the State of Iowa.

3. I certify that the Affidavit of Emily Sue Savage-Rumbaugh, signed and dated on
November 22, 2013, was taken in the manner prescribed by the laws of the State of Iowa.

Dated: November 22, 2013
Des Moines, Iowa

Jerry L. Anderson, Esq.
610 E. Salem Ave.
Indianola, Iowa 50125

**Exhibit A to Savage-Rumbaugh -
Curriculum Vitae
[pp. 467 - 503]**

CURRICULUM VITAE

Emily Sue Savage-Rumbaugh

Address: Iowa Primate Learning Sanctuary
4200 SE 44th Avenue
Des Moines, IA 50320
(515) 243 – 3580

Education

B.A. (Cum Laude), Southwest Missouri University: Psychology; May, 1970
M.S. University of Oklahoma: Psychology; May, 1972
Ph.D. University of Oklahoma: Psychology; May, 1975
Faculty Advisor: Dr. W. B. Lemmon

Current Position

Director Emeritus -- Iowa Primate Learning Sanctuary

Academic Appointments

2004-2011 Affiliate Professor Iowa State University, Simpson College
1992-2004 Professor, Dept. of Biology & Psychology, Georgia State University
1987-92 Assoc. Professor, Dept. of Biology, Georgia State University
1984-92 Assoc. Research Professor, Yerkes Primate Research Center, Emory
University
1983-87 Adjunct Assoc. Professor, Dept. of Biology, Georgia State University
1977-84 Ass't Research Professor, Yerkes Primate Research Center Emory
University
1976-77 Research Assoc., Yerkes Regional Primate Research Center, Emory
University
1975-76 Post-Doctoral Fellow, Georgia State University
1972-75 Graduate Teaching Ass't, Department of Psychology, University of
Oklahoma

Areas of Teaching Competency

primate behavior, evolution of innate behaviors, evolution of learned behavior, learning theory, developmental psychology, biology, psycho-biology of language, socio-biology, introductory ethology.

Research Experience

1970-71 Study of cognitive and verbal learning processes of children
1971-72 Study of cognitive processes and linguistic behavior in captive *Pan troglodytes*
1972-75 Captive studies of mother-infant groups of *Pan troglodytes*
1975-76 Comparative studies of the social behavioral of *Pan paniscus* and *Pan*

- trogodytes*
- 1976-1989 Studies of symbolic and cognitive processes in *Pan paniscus*, *Pan troglodytes*, and alinguistic *Homo sapiens*
- 1989-to now Studies of the lexical and vocal linguistic ability, musical ability, tool manufacturing ability and general cognitive development of apes, with a specific focus on bonobos.
- 1993 Studies of free-ranging bonobos.

Awards and Honors

- Bob Green Fellowship, for academic distinction, Southwest Missouri University, 1969-1970.
- Woodrow Wilson Fellow, 1970-75.
- First Place, Graduate Student Paper Competition, Midwest Psychological Association, Oklahoma City, 1972.
- Fellow, Division 6, APA 1985-present
- Fellow, Division 1, APA 1985-present
- Fellow, APS 1996-present
- National Lecturer, Sigma Xi, The Scientific Research Society, July 1, 1988 to June 30, 1990.
- Representative for Women in Science, Brigham Young University, 1989
- The Smithsonian Institution's display of "Understanding Ourselves, Understanding Each Other," sponsored by the American Psychological Association's Centennial Convention, featured research of the Language Research Center, Georgia State University, to which I made major contributions. A film by the same name of the display is now distributed nationally for educational purposes by the APA, 1992
- Nobel Conference XXXII Invited Speaker, "Apes at the End of an Age: Primate Language and Behavior in the 90's", Gustavus Adolphus College, October, 1996.
- Honorary Doctor of Science, The University of Chicago, Chicago, Ill., June, 1997.
- Author, "Language comprehension in ape and child," published Monographs of the Society for Research in Child Development (1993), selected by the "Millennium Project," a listing of the top 100 most influential works in cognitive science in the 20th century by the University of Minnesota Center for Cognitive Sciences, 1999.
- Leighton A. Wilkie Award in Anthropology, Indiana University, November, 2000.
- Selected as a Woman of Influence, by Des Moines Business Record, 2007
- Honorary Doctor of Science, Missouri State University, 2008.
- Selected as one of the most 100 Influential scientists in the world, *Time Magazine*, 2010

Committees

- 1996-2004 Editorial Board of Language and Communication.
- 1989 Site visit committee member, National Institute of Child Health and Human Development.

1989-2004 Neurobiology and Behavior Development Committee Department of
Biology, Georgia State University

Professional Organizations

American Psychological Association
American Psychological Society
International Primatological Society
Society for Research and Child Development

PRESENTATIONS

Presentations 1978

Savage-Rumbaugh, E. S. (1978, Fall). Symbolic communication between chimpanzees. Invited seminar speaker, Swarthmore College, Swarthmore, PA.

Savage-Rumbaugh, E. S. (1978, Fall). Tool-use and symbolic communication in the chimpanzee. Invited seminar speaker, Princeton University, Princeton, NJ.

Savage-Rumbaugh, E. S. (1978, Fall). Symbol acquisition in apes: A discussion of the

paradigms. Invited seminar speaker, Rockefeller University, NY.

Presentations 1980

Savage-Rumbaugh, E. S. (1980, January). The status of chimpanzee language research. Invited seminar speaker, Kenyon College, Gambier, OH.

Savage-Rumbaugh, E. S. (1980, May). Straight from the horse's mouth. Paper presented at Conference on Clever Hans Phenomenon: Communication with horses, whales, apes, and people, New York Academy of Sciences.

Savage-Rumbaugh, E. S. (1980, November). Ape language research. Invited speaker, Georgia chapter of Sigma Xi.

Presentation 1981

Savage-Rumbaugh, E. S. (1981, February). Emergence of communication skills in two chimpanzees. Invited seminar speaker, Department of Anthropology and the Center for Cognitive Studies, University of Chicago.

Savage-Rumbaugh, E. S. (1981, November). Levels of Communicative symbol use: Prerepresentational and representational. Invited presentation at the T. C. Schneirla Conference on Developmental Genetics and Learning, Wichita, KS.

Savage-Rumbaugh, E. S. (1981, November). Ape language research: Update and clinical implications. Short course presented at the Annual Meeting of the American Speech-Language-Hearing Association, Los Angeles, CA.

Presentations 1982

Savage-Rumbaugh, E. S. (1982, March). Language behaviors of humans and apes -- pigeons, too? Discussant for symposium at the annual meeting, Southeastern Psychological Association, New Orleans, LA.

Savage-Rumbaugh, E. S. (1982, May). Behavioral similarities of chimpanzees and pigeons: Superficial or real? Invited speaker, Meeting of the Association for Behavior Analysis, Milwaukee, WI.

Savage-Rumbaugh, E. S. (1982, June). Acquisition of functional symbol usage in apes and children. Invited speaker, Harry Frank Guggenheim Conference on Animal Cognition, Columbia University, NY.

Romski, M. A., White, R. A., and Savage-Rumbaugh, E. S. (1982, June). Language training using communication boards: some special considerations. Presented at the annual meeting, American Association on Mental Deficiency, Boston, MA.

Savage-Rumbaugh, E. S. and Rumbaugh, D.M. (1982, August). Referential symbol skills of two chimpanzees. Paper presented at the Congress of the International

Primatological Society, Atlanta, GA.

Savage-Rumbaugh, E. S. (1982, November). Primate communication and language. Invited speaker, Symposium on Human Origins, University of Alabama, Birmingham, AL.

Presentations 1983

Pate, J. L. and Savage-Rumbaugh, E. S. (1983, March). Does a chimpanzee know what it is saying? Presented at the annual meeting, Southeastern Psychological Association, Atlanta, GA.

Savage-Rumbaugh, E. S. (1983, May). Verbal behavior in the chimpanzee. Invited address, Association for Behavioral Analysis, Milwaukee, WI.

Savage-Rumbaugh, E. S. (1983, June). Ape language and the issue of intentional communication. Keynote speaker, Annual Meeting of the Animal Behavior Society, Lewisburg, PA.

Savage-Rumbaugh, E. S. (1983, June). Chimpanzee Language Learning: Current Status. Invited presentation at the conference on Dolphin behavior and cognition: Comparative and ecological aspects. Target papers, ONR sponsored conference, Hubbs-Sea World Research Institute, San Diego, CA.

Savage-Rumbaugh, E. S. (1983, August). Language: A continuum from ape to human. Invited paper at the Symposium of the American Psychological Association, Anaheim, CA.

Savage-Rumbaugh, E. S. (1983, September). Ape language from a behavioral perspective. Paper presented at an Invitational Conference on Research Paradigms, coordinated by the National Institute of Child Health and Human Development, Washington, D. C.

Savage-Rumbaugh, E. S. (1983, November). Comparisons of preverbal competency between Pan troglodytes and Pan paniscus. Invited paper presented at Symposium on the pygmy chimpanzee, International Primatological Conference, Atlanta, GA.

Savage-Rumbaugh, E. S. (1983, December). Apes, language, and what their accomplishments have to say to human beings. Keynote Speaker, Women in Science Symposium, Kennesaw College, Kennesaw, GA.

Presentations 1984

Savage-Rumbaugh, E. S. (1984, January). Do apes really talk? Invited speaker, Biological Sciences Symposium, University of Georgia, Athens, GA.

Savage-Rumbaugh, E. S. (1984, May). Contrasts in symbolic communicative competency in Pan troglodytes and Pan paniscus. Invited paper presented at Association of Behavioral Analysis, Nashville, TN.

Savage-Rumbaugh, E. S. (1984, May). Language acquisition in the great apes: And overviews. Paper presented at the Conference for the Integration of the Sciences, Georgia State University, Atlanta, GA.

Savage-Rumbaugh, E. S. (1984, June). The capacity of animals to acquire language -- Do species differences have anything to say to us? Invited paper presented at the Royal Society of England, London.

Presentations 1985

Savage-Rumbaugh, E. S. (1985, May). Language acquisition and cognition in the chimpanzee. Invited symposium speaker, Rutgers Symposium on Animal Cognition, New Brunswick, NJ.

Savage-Rumbaugh, E. S. (1985, June). Language acquisition in two species of apes. Keynote speaker, Annual Scientific Meeting of the American Society of Primatologists, University of Buffalo, State University of New York, Niagara Falls, NY.

Savage-Rumbaugh, E. S. (1985, August). Language learning without training in the pygmy chimpanzee. Invited symposium speaker, American Psychological Association, Division of Experimental Psychology, Los Angeles, CA.

Presentations 1986

Savage-Rumbaugh, E. S. (1986, January). Language acquisition and nonverbal behavior in apes. Invited speaker, Emory Anthropology Department, Atlanta, GA.

Savage-Rumbaugh, E. S. (1986, February). The implications of ape language studies for Philosophy and Biology. Invited keynote speaker at the "Can Philosophy Help Biology... and vice versa" conference, University of Georgia, Athens GA.

Savage-Rumbaugh, E. S. (1986, March). Language learning and English comprehension in the pygmy chimpanzee. Invited speaker, Behavioral Biology Seminar Series, Rockefeller University, NY.

Savage-Rumbaugh, E. S. (1986, March). The pygmy chimpanzee learns to use and comprehend symbols without training. Invited speaker, Class of 1902 Lecture Series, Bryn Mawr, NY.

Savage-Rumbaugh, E. S. (1986, June). Comprehension of spoken English and synthesized speech in a pygmy chimpanzee (*Pan paniscus*). Presented at the eighth annual meeting, American Society of Primatologists, Austin, TX.

Brakke, K. E., Savage-Rumbaugh, E. S., McDonald, K., & Hopkins, W. D. (1986, June). A comparative analysis of symbol acquisition in two pygmy chimpanzees (*Pan paniscus*). Paper presented at the Eighth Annual Meeting, American Society of

Primatologists, Austin, TX.

- Hopkins, W. D., & Savage-Rumbaugh, E. S. (1986, June). Vocal communication in the pygmy chimpanzee (*Pan paniscus*) as a result of differential rearing experiences. Paper presented at the Eighth Annual Meeting, American Society of Primatologists, Austin, TX.
- Rumbaugh, D. M., & Savage-Rumbaugh, E. S. (1986, June). Summation in the chimpanzee. Paper presented at the Eighth Annual Meeting, American Society of Primatologists, Austin, TX.
- Sevcik, R. A., Savage-Rumbaugh, E. S., & McDonald, K. (1986, June). Video experience and symbol acquisition in a pygmy chimpanzee (*Pan paniscus*). Paper presented at the Eighth Annual Meeting of the American Society of Primatologists, Austin, TX.
- Greenfield, P. M. and Savage-Rumbaugh, E. S. (1986, July). Imitation is not rote: Pragmatics of repetition in child and chimpanzee. Presented at the XIth Congress of the International Primatological Society, Gottingen, West Germany.
- Savage-Rumbaugh, E. S., Romski, M. A., Hopkins, W. D., & Sevcik, R. A. (1986, November). Species differences in language acquisition and use. Invited presentation at the Chicago Academy of Science Conference, "Understanding Chimpanzees," Chicago, IL.
- Presentations 1987**
- Savage-Rumbaugh, E. S. (1987, March). A new look at ape language: Comprehension of vocal speech and syntax. Invited speaker at the 35th Annual Nebraska Symposium on Motivation, "Comparative Perspectives in Modern Psychology," University of Nebraska, Lincoln, NE.
- Savage-Rumbaugh, E. S. (1987, April). Contrasts in symbol acquisition between pygmy chimpanzees. Invited speaker, Biennial Meeting of the Society for Research in Child Development, Baltimore, MD.
- Hopkins, W. D., Rumbaugh, D. M., Savage-Rumbaugh, E. S. and Washburn, D. A. (1987, June). Learning strategies in the acquisition of counting behavior in a chimpanzee. Presented at the annual meeting of the American Society of Primatologists, Madison, WI.
- Sevcik, R. A., Romski, M. A., & Savage-Rumbaugh, E. S. (1987, November). Role of comprehension in symbol acquisition: Evidence from special populations. Mini-seminar presented for the Meeting of the American Speech-Language-Hearing Association, New Orleans, LA.

Presentations 1988

Savage-Rumbaugh, E. S. (1988, March). Where language studies of apes have come from, where they are now, and where they are going. Invited speaker, History and Philosophy of Science Series, Franklin and Marshall College, Lancaster, PA.

Rumbaugh, D. M., & Savage-Rumbaugh, E. S. (1988, April). Counting and protoarithmetic competencies of chimpanzees (Pan troglodytes). Paper presented at the Eightieth Annual Meeting of the Southern Society for Philosophy and Psychology, Miami, FL.

Savage-Rumbaugh, E. S. (1988, April). Some of our best friends are chimps. Invited speaker, DeKalb GSU Alumni Program, Atlanta, GA.

Savage-Rumbaugh, E. S. (1988, May). Language comprehension is key to referential language production in chimps and retarded children. Invited speaker, Animal Language and Communication Series, San Diego State University, San Diego, CA.

Savage-Rumbaugh, E. S., & Rumbaugh, D. M. (1988, June). Language skills of chimpanzees and bonobos. Invited speakers, National Institute of Child Health and Development Conference, Bethesda, MD.

Savage-Rumbaugh, E. S. (1988, August). Speech comprehension with semantic content by the bonobo. Paper presented at the Annual meeting of the American Psychological Association, Atlanta, GA.

Sevcik, R. A., Savage-Rumbaugh, E. S., Ronski, M. A. (1988, August). Symbolic communication by apes and humans: A longitudinal comparative perspective. Poster session presented at the Annual meeting of the American Psychological Association, Atlanta, GA.

Savage-Rumbaugh, E. S. (1988, October). Invited Speaker, Psychological Sciences Program Seminar, Georgia State University, Atlanta, GA.

Savage-Rumbaugh, E. S. (1988, November). Methods of measuring language comprehension in apes. Invited Speaker, Emory program in cognition and development, Emory University, Atlanta, GA.

Savage-Rumbaugh, E. S. (1988, November). Why apes talk and what they have to say. Invited Speaker, Concordia University, Montreal, Canada.

Presentations, 1989

Savage-Rumbaugh, E. S. (1989, April). Language: Our erroneous but cherished preconceptions. Invited lecture at the Animal Language Workshop, University of Hawaii at Manoa.

Savage-Rumbaugh, E. S. (1989, February). Language learning: A capacity unique to

Homo sapiens? Invited lecture, Georgia State University Department of Anthropology, Atlanta, GA.

Savage-Rumbaugh, E. S. (1989, April). Invited seminar on Psychobiology of Animal Cognition, Columbia University, New York.

Savage-Rumbaugh, E. S., Brakke, K. E., Sevcik, R. A. (1989, June 10-11). Comparative language acquisition in apes. Poster presented at the First annual meeting of the American Psychological Society, Alexandria, VA.

Bolser Gilmore, L., Savage-Rumbaugh, S. (1989, June 15-17). Reproductive and delivery behavior of a bonobo (Pan paniscus). Poster and videotape presented at the Fertility in Great Apes Conference, Atlanta, GA.

Brakke, K., Savage-Rumbaugh, E. S. (1989, August 10-12). Speech Comprehension in Infant Bonobo (Pan paniscus) and Chimpanzee (Pan troglodytes). Paper presented at the fifth annual meeting of the Language Origins Society, University of Texas, Austin, TX.

Savage-Rumbaugh, E. S. (1989, September). Site visit committee member, National Institute of Child Health and Human Development.

Savage-Rumbaugh, E. S. (1989, October). Invited lecture, Oglethorpe University, Atlanta, Georgia.

Savage-Rumbaugh, E. S. and Rumbaugh, D. (1990, March 16-24). The invention of language. Invited paper presented at the Wenner-Gren Foundation for Anthropological Research, Cascais, Portugal.

Presentations, 1990

Brakke, K. E. & Savage-Rumbaugh, E. S. (1990, March 29-31). Comparative motor and manipulatory development: Behavior growth in infant human and apes. Poster presented at the 11th Biennial Conference on Human Development hosted within the Southeastern Region of the United States, Richmond VA.

Rumbaugh, D. M., Washburn, D. A., Savage-Rumbaugh, E. S. & Hopkins, W. D. (1990, March 29-April 1). The Language Research Center's Computerized Test System (LRC-CTS): Video-formatted tasks for primates. Paper presented at the Eighty-Second Annual Meeting of the Southern Society for Philosophy and Psychology.

Savage-Rumbaugh, E. S., (1990, April 17). Ape Minds: What are they in the Chimpanzee, Dialogue Series. Institute for Disabilities Studies, University of Minneapolis, Minneapolis, MN.

Savage-Rumbaugh, S., Ronski, M.A., Rumbaugh, D. (1990, April 18-21). Comprehension versus Production: How is Language Learned? Invited paper

presented at the 23rd Annual Gatlinburg Conference on Research and Theory in Mental Retardation and Developmental Disabilities, Brainerd, MN.

- Savage-Rumbaugh, E. S. (1990, May 16). Language learning: A capacity unique to Homo sapiens? Department of Anthropology, California State University, Sacramento CA.
- Savage-Rumbaugh, E. S. (1990, June 8). Syntactical comprehension in the bonobo. Paper presented in symposium, Chimpanzees: Language, speech, comprehension, counting, and video tasks, Second annual convention of the American Psychological Society, Dallas, TX.
- Savage-Rumbaugh, E. S. (1990, June 14). Apes and us: What happens when we begin to communicate with each other? Lecture to Yerkes Regional Primate Research Center Faculty and Staff.
- Savage-Rumbaugh, E. S., & Rumbaugh, D. M. (1990, July 20). Language acquisition and use in the bonobo. Videotape presentation presented at the thirteenth Congress of the International Primatological Society, Nagoya, Japan.
- Rumbaugh, D. M., Washburn, D. A., Savage-Rumbaugh, E. S., Hopkins, W. D. & Richardson, W. (1990, July 21). The Language Research Center's Computerized Test System (LRC-CTS): Video-formatted tasks for primates. Paper presented at the thirteenth Congress of the International Primatological Society, Nagoya, Japan.
- Savage-Rumbaugh, E.S. (1990, July 22). Ape Language Research: Past, present and future. Guest speaker, Thirteenth Congress of the International Primatological Society, Satellite symposium at Kuruma-michi Campus, Aichi University, Nagoya, Japan.
- Savage-Rumbaugh, E. S. (1990, July 23). Cognitive, linguistic, and postural developmental contrasts between female co-reared Pan troglodytes and Pan paniscus. Presented in symposium, "Behavior of our closest relatives, chimpanzees and bonobos", at the Thirteenth Congress of the International Primatological Society, Kyoto, Japan.
- Savage-Rumbaugh, E. S. (1990, July 24). Implications of the cognitive and linguistic abilities of the bonobo for theories of the development of hominid culture. Presented in symposium, "Hominid Culture in primate perspective" at the thirteenth Congress of the International Primatological Society, Kyoto, Japan.

Presentations 1991

- Rumbaugh, D. M., & Savage-Rumbaugh, E. S. (1991, April 11-14). Chimpanzees track normal child language. In T. Verhave (Chair), "Higher-order classes and language: Data from humans and nonhumans." Symposium conducted at the

Eastern Psychological Association, NY.

Sevcik, R. A., Savage-Rumbaugh, E. S., & Hirsh-Pasek, K. (1991, April).

Overextensions in a pygmy chimpanzee are referential and not associative in nature. Paper presented at the Biennial Meeting of the Society for Research in Child Development, Seattle, WA.

Savage-Rumbaugh, E. S. (1991, May 1-4). Language and cognition innate. Invited presentation at the 24th Annual Gatlinburg Conference on Research and Theory in Mental Retardation and Developmental Disabilities, Key Biscayne, FL.

Presentations 1992

Williams, S. L., & Savage-Rumbaugh, E. S. (1992, April). English comprehension in Pan paniscus. Presented at the Eastern Psychological Association meeting, Boston, MA.

Williams, S. L., & Savage-Rumbaugh, E. S. (1992, August). Differential rearing and effects on acquisition of language and other cognitive abilities. Presented at the XIVth Congress of the International Primatological Society, Strasbourg, France.

Savage-Rumbaugh, E. S. (1992, August). Chimpanzee and humans – The language link. G. Stanley Hall Lecturer at the American Psychological Association, Washington, DC.

Presentations 1993

Savage-Rumbaugh, S. (1993, February). What does my cousin think? Language capacity in the great apes. Invited presentation presented at the annual meeting of AAAS Meeting, Boston, MA.

Chung, J. C., Bowman, B. A., Savage-Rumbaugh, E. S., & Williams, S. (1993, March). Nutrient intakes of bonobos chimpanzees (Pan paniscus). Fed of American Society of Exp. Biology Journal: 7(3), A294. Poster presented in New Orleans, LA. (abstract).

Savage-Rumbaugh, S. (1993, March). The critical components of language acquisition in apes and humans. In S. Savage-Rumbaugh (Chair), "Language processes in apes and humans: Facilitation and assessment." Presented at the 26th Annual Gatlinburg Conference on Research and Theory in Mental Retardation and Development Disabilities, Gatlinburg, TN..

Savage-Rumbaugh, S. (1993, April). Working with apes who get it. Invited presentation at the Annual Series "Lectures on Mental Retardation and Human Development", Kennedy Center, Nashville, TN.

Savage-Rumbaugh, S. (1993, April). Language and animal mind. Film presented at The Mental Lives of Animals Conference sponsored by The Department of

Philosophy and The Language Research Center, Georgia State University,
Atlanta, GA.

Rumbaugh, D. M., & Savage-Rumbaugh, S. (1993, May). Language skills of chimpanzees. Presented at the Annual Chimpanzoo Conference, Green Oakes Inn, Fort Worth, TX.

Presentations 1994

Savage-Rumbaugh, E. S., & Rumbaugh, D. M. (1994, March). Primate intelligence. Panel discussion, Biology Department Seminar Series, Morehouse College, Atlanta, Ga.

Savage-Rumbaugh, E. S. (1994, May). Concepts of competency. A presentation within Creating Culture Apes & Humans: A Forum for Discussion. Sponsored by Georgia State University and Emory University, Atlanta, GA

Savage-Rumbaugh, E. S. (1994, October). Lecturer at Kyoto University Primate Research Center, Inuyama, JAPAN.

Savage-Rumbaugh, E. S. (1994, October). Lecturer at Meiji-Gakuin University (Yokohama), Tokyo, JAPAN.

Savage-Rumbaugh, E. S., & Rumbaugh, D. M. (1994, October). The intelligence of animals. Invited presentation at the Nagoya Port Aquarium, Nagoya, JAPAN.

Savage-Rumbaugh, E. S., Williams, S., Furuichi, T., & Kano, T. (1994, November). Language realized: Symbolic communication of Pan paniscus. Invited paper at The Great Apes Revisited Conference, Wenner-Gren Foundation for Anthropological Research, Mexico.

Presentations 1995

Savage-Rumbaugh, E. S. (1995, March). The Eighth CSEOL Symposium. Invited presentation: Communication with Chimpanzees. UCLA Center for the Study of Evolution and the Origin of Life.

Savage-Rumbaugh, E. S. (1995, April). Guest Lecturer: Toward a Science of Consciousness conference. Hosted by University of Arizona, Tucson.

Presentations 1996

Savage-Rumbaugh, E. S. (April, 1996). Keynote Address Why have we assumed that animals do not have language? Conference on The Minds of Nonhuman Animals, University of Colorado at Boulder.

Beran, M. J., Rumbaugh, D. M., & Savage-Rumbaugh, E. S. (August, 1996). Performance of a chimpanzee (Pan troglodytes) on a computerized counting task. Poster Session at the XVIth Congress of the International Primatological Society,

University of Wisconsin, Madison, WI

Savage-Rumbaugh, E. S. & Rumbaugh, D. M. (1996, August). Primate intelligence and language: Brain and Environment. Symposium at the XVIth Congress of the International Primatological Society and the XIXth Conference of the American Society of Primatologists, University of Wisconsin, Madison, WI.

Savage-Rumbaugh, E. S. (1996, October). Invited speaker at the XXXII Nobel Conference. Apes at the end of an age: Primate language and behavior in the 90's. Gustavus Adolphus College.

Presentations 1997

Savage-Rumbaugh, E. S. (1997, January). Invited speaker, Buckhead Rotary, Atlanta, GA.

Beran, M. J., Rumbaugh, D. M., & Savage-Rumbaugh, E. S. (1997, March). Paper presented at Southern Society for Philosophy and Psychology Annual Meeting. Evaluation of current language comprehension in three chimpanzees (Pan troglodytes): Effect of rearing on duration of language comprehension. Atlanta, GA.

Rice, D. R., Savage-Rumbaugh, E. S., & Rumbaugh, D. M. (1997, March). Session at Southern Society for Philosophy and Psychology Annual Meeting. A chimpanzee's ability to learn ordinality and counting. Atlanta, GA.

Savage-Rumbaugh, E. S. (1997, April). Lecturer, Seminar entitled Exploring the Primate Mind. Primate language: At the brink of the human mind. National Zoological Park, Washington, D.C.

Savage-Rumbaugh, E. S. (1997, May). Sigma Xi Public Talk. Apes, Language, Math, and Minds. University of New Mexico, Albuquerque, NM.

Savage-Rumbaugh, E. S. (1997, December). Discussant. Great Ape Concert, Canberra, Australia.

Savage-Rumbaugh, E. S. (1997, December). Keynote Speaker. Australian Primate Society Annual Meeting. Tasmania, Australia.

Savage-Rumbaugh, E. S. (1997, December). Invited Lecturer. University of New England, Armidale, Australia.

Presentations 1998

Savage-Rumbaugh, E. S. (1998, February). Invited symposium at American Association for the Advancement of Science Annual Meeting. Darwinian Perspectives on the origin of Language: Bonobo Communication. Philadelphia, PA.

- Beran, M. J., Savage-Rumbaugh, E. S., & Brakke, K. E. (1998, April). Paper presented at the 2nd International Conference on the Evolution of Language. Language comprehension in three chimpanzees (Pan troglodytes): Effect of rearing on level of comprehension.
- Savage-Rumbaugh, E. S. & Fields, W. M. (1998, June). Language and culture: A trans-generational interweaving. Invited speaker, Jan Wind Memorial Lecture, Language Origins Society, 14th Annual Meeting, Tallahassee, FL.
- Savage-Rumbaugh, E. S. (1998, November). Behavior and mental abilities of primates. Invited speaker, Tufts University Center for Animals and Public Policy, Lecture series: "Animal Cognition and Communication", Natick, MA.

Presentations 1999

- Savage-Rumbaugh, E. S. & Fields, W. M. (1999, January). The differential emergence of consciousness in infant bonobos as a function of pre- and post-natal environment. Invited speaker, "The Problem of Animal Consciousness: Historical, Theoretical, and Empirical Perspectives", sponsored by the Society of Integrative and Comparative Biology, Denver, CO.
- Savage-Rumbaugh, E.S. & Fields, W.M. (1999). Probing the Realities of Ape Language. Invited speaker, "The Evolution of Apes and the Origins of Human Beings," SAGA2/COE Joint International Symposium, Primate Research Institute, Kyoto University, Inuyama, Japan, November.
- Savage-Rumbaugh, E. S. (1999, July) Bonobos: Music, Art, Tools, and Speech. Invited speaker, SpoletoScienza conference on "Views on the Mind", Spoleto, Italy.
- Savage-Rumbaugh, E. S. (1999, September). Invited speaker, "Consciousness: Integrating Phenomenology and Cognitive Science", sponsored by the Fetzer Institute, Kalamazoo, MI

Presentations 2000

- Savage-Rumbaugh, E. S., Rumbaugh, D. M. (2000, March) The apes and us: Language, culture, and other emergent processes. "Crossing Boundaries" Annual Conference of the American Association for Applied Linguistics, Vancouver, Canada.
- Savage-Rumbaugh, E. S., Fields, W. M., Tagliatela, J. P. (2000, April). Language, Culture and Tools. Invited speakers, 3rd International Conference on "The Evolution of Language", Paris, France.
- Savage-Rumbaugh, E. & Fields, W. (2000, July). "A Restatement of the Achievements of Ape Language with a Theory of Mind Update." The XXVII International Congress of Psychology, Stockholm, Sweden.

Savage-Rumbaugh, E. S. (2000, September). Why play? Invited speaker, "The Playful Mind" symposium, Lemelson Center for the Study of Invention and Innovation, Smithsonian National Museum of American History.

Presentations 2001

Menzel, C. R., Savage-Rumbaugh, E. S., Menzel, E. W. Jr. (2001, January). Primate Geometry. Paper presented at "Primates in the New Millennium", The XVIIIth Congress of the International Primatological Society, Adelaide, South Australia.

Savage-Rumbaugh, E. S. and Taglialatela, J. P. (2001, January). The mind of the bonobo: expectations, explications, and conversations. Paper presented at "Primates in the New Millennium", The XVIIIth Congress of the International Primatological Society, Adelaide, South Australia.

Renard, S. and Savage-Rumbaugh, E. S. (2001, July). Intonation and meanings in bonobo vocalizations. Paper presented at "Interfaces: Systemic Functional Grammar and Critical Discourse Analysis," The 28th International Systemic Functional Congress, Ottawa, Canada.

Savage-Rumbaugh, E. S., Spircu, T., & W. Fields (2001, August). Vocal speech in a nonhuman primate. Presented at the XXVII International Ethological Conference, Tübingen, Germany.

Presentations 2002

Savage-Rumbaugh, E. S. (2002, June). Apes, language and species – Where we've been and where we're going: A Tribute to the critic. Presented at "Zoosemiotics: From Clever Hans to Kanzi in Memory of Tom Sebeok (1920-2001)," Center for Semiotic and Cognitive Studies, Università degli Studi, Repubblica di San Marino.

Savage-Rumbaugh, E.S. (2002, October). Symbols, syntax, paragraphs, and context. Where the subjective confronts the objective. Presented at Emory Cognition Workshop. Symbol Use and Symbolic Representation. Emory University, Decatur, Georgia.

Presentations 2003

Savage-Rumbaugh, E.S. & Fields, W. (2003, April). The Emergence of Tools Embedded in Culture: Beyond Anthropomorphism. The 39th Annual University of Cincinnati Philosophy Colloquium: Perspectives on the Animal Mind.

Fields, W. & Savage-Rumbaugh, S. (2003, May). Bonobo Beliefs and Desires. Seventh Congress of the Association of the Scientific Study of Consciousness. Memphis, Tennessee.

Spircu, T. & Savage-Rumbaugh, E.S. (2003, June). Analyzing bonobo vocalization by using computer; results and limitations. University of Bielefeld, Center for

Interdisciplinary research, Seminary on General Theory of Information Transfer and Combinatorics.

Savage-Rumbaugh, E.S. (2003, October). The Development of Forgiveness. Forgiveness Conference, Templeton Foundation, Atlanta, Georgia.

Presentations 2004 – Bonobos Relocated to Great Ape Trust

Savage-Rumbaugh, S. (2004, February). Fifteen Minutes of Apes. The TED Conference, Monterey, California.

Presentations 2005

Savage-Rumbaugh, S. (2005, February). Our Closest Living Relatives, the Bonobos: What They Mean to Us and Why. Invited lecturer, “Speaking of Science” series at Buena Vista University, Storm Lake, Iowa.

Presentations 2006-2008

Records lost during move of bonobos from the Language Research Center to Great Ape Trust.

Presentations (2009)

Maternal care, self agency, moral agency, epigenetics and culture: Implications for the rise of language in *Homo symbolicus* and *Pan symbolicus*. Jan. 16-20, Capetown, South African, *Homo symbolicus: The Dawn of Language, Imagination and Spirituality*. A symposium presented by the John Templeton Foundation.

Language: The Carrier Wave of Culture, Tools and Intelligence, Science Circle, February 2009.

Intentionality in All its Guises, Invited Speaker, Evolutionary Studies Program at Binghamton University. March 20, 2009. Binghamton University

Why the Pan/Homo Culture made Kanzi speak: Culture theory as a supplement to genetic evolution. May, 2009. Berlin Behavioral Biology Symposium, Berlin.

How Culture Makes Bonobos Speak: The Rise of Language, Consciousness and Moral Agency in Bonobos (*Pan symbolicus*). Science Circle, Great Ape Trust, June 29.

Sigma Xi National Lecturer—1988-1990

1988 September, Western Maryland College, Westminster, MD.

1988 October, Southwest Missouri State University, Springfield, MO.

1989 February, University of South Florida, Tampa, FL.

- 1989 April; Columbia University, New York
- 1989 May; University of Cincinnati, Cincinnati, OH.
- 1989 May; Rush-Presbyterian-St. Lukes Medical Center, Chicago, IL.
- 1989 August; Vassar College, Poughkeepsie, NY
- 1989 October; Northwestern University, Evanston, IL.
- 1989 November; Hollins College, Roanoke, VA.
- 1989 December; Marshall University, Huntington, West VA.
- 1990 January; Eastern Kentucky University, Lexington, KY.
- 1990 January; Stockton College, Pomona, NJ.
- 1990 February; Hope College, Holland, MI.
- 1990 February; Georgia Tech University & Emory University, Atlanta, GA.
- 1990 February; University of South Dakota, Vermillion, SD and South Dakota State University, Brookings, SD.
- 1990 March; Cornell University, Geneva, NY.

RESEARCH GRANTS

- Research Development Grant (1974), University of Oklahoma (\$1,500).
- National Institute of Child Health and Human Development HD06016 (1980-1985).
Principal Investigator, Animal Model Project (\$100,000).
- National Institute of Child Health and Human Development HD06016 (1985-1999).
Principal Investigator, Language Acquisition in *Pan paniscus* (\$2,500,000). Co-
investigator, Cognitive Project.
- Biomedical Research Support Grant, Emory University (1987-1989). Co-investigator,
"Hemispheric dominance for language and cognitive processes in the
chimpanzee" (\$20,000).
- World Wildlife Fund, Grant # HW13, March 1, 1998 - February 28, 2000. Principal
Investigator, Partial Support of the Congolese Conservation Initiative of the
Bonobo Protection Fund (\$15,000).
- The Templeton Foundation, Grant (2001-2004) Program Project Coordinator. Studies in
Forgiveness (\$218,322).
- The Milt Harris Foundation, Grant (2002-2003) Principal Investigator, "Non-Human
Vocalization Study (*Pan paniscus*)" (\$50,000).

National Institute of Child Health and Human Development HD06016 (1999-2002)
Program Project Coordinator, Studies of Language, Culture, and Tools
(\$1,530,689).

National Institute of Child Health and Human Development HD06016 (1999-2002)
Principal Investigator, The Embedding of Language in Culture (\$338,601).

REVIEW ACTIVITIES

1985-present: Board of Editors, Psychological Record

Referee: American Journal of Primatology, American Scientist, Brain and Behavioral
Sciences, Journal of Comparative Psychology, National Institute of Health,
National Geographic Journal, National Science Foundation, Psychological Record
(Board of editors, 1985-pres.), Science, Yale University Press, Center for Field
Research

Grant Reviews: National Institute of Health, National Geographic Society, National
Science Foundation, Center for the Field Research

COUNTRY OF _____)
STATE OF _____) ss :
CITY OF _____)

James R. Anderson being duly sworn, deposes and says:

Introduction and Qualifications

1. My name is James R. Anderson. I live and work in Kyoto, Japan. I graduated with a Bachelor of Science in Psychology from the University of Stirling (Scotland) in 1977, and a Ph.D. in Psychology from the University of Stirling in 1982.

2. I submit this Affidavit in support of Petitioner, The Nonhuman Rights Project, Inc.'s ("NhRP"), petition for a writ of habeas corpus on behalf of Kiko. I am a non-party to this proceeding.

3. I am a faculty member at Kyoto University. My current position is Professor in Psychology, in the Graduate School of Letters. From 1995 until 2014, I taught Introductory Psychology, Animal Behaviour, and Developmental and Comparative Psychology at the University of Stirling. I have also taught courses on Animal Behaviour and Animal Welfare at the Universities of Edinburgh (Scotland) and Strasbourg (France). Since April 2014, I teach courses on nonhuman primate biology and behaviour, and comparative psychology, at Kyoto University.

4. I have conducted behavioural research on wild chimpanzees in West Africa (Senegal: 1977, 1979; Liberia: 1982), and supervised graduate students who have studied chimpanzees with Japanese colleagues in Guinea (West Africa: 1999-2003; 2004-2005). I have also directly conducted research and have supervised graduate students' research on captive chimpanzees in Japan and Scotland.

5. Since 1987, I have been a scientific advisor to the Primatology Centre of Strasbourg University (France). I have served on the editorial boards of the following scientific journals: *Journal of Comparative Psychology* (1991-1994), *Primatologie* (1997-2007), *Current Psychology Letters: Brain, Behaviour & Cognition* (1998-2011), *American Journal of Primatology* (2006-2013), *Primates* (2002-present), and *Animal Cognition* (2013-present). I have conducted peer reviews of more than 500 manuscripts submitted to academic journals in psychology, biology, anthropology, and general science.

6. I am a specialist in the behaviour of nonhuman primates, with particular focus on learning and social cognition. My behavioural studies have been on multiple species of prosimians, New and Old World monkeys, and apes. In addition to field research on baboons and chimpanzees in West Africa, and macaques in southern India, I have studied several primate species in laboratories and zoological parks. Distinctions and awards include nomination for the Bronze Medal, Société pour le Progrès de l'Homme, and Auxiliary Award, O.P.A.L. (Oeuvre pour la Protection des Animaux de Laboratoire).

7. I have co-edited 4 volumes: *Primates: Recherches Actuelles* (1990, Masson, Paris), and *Current Primatology*, Vols. 1, 2 and 3 (1994, Université Louis Pasteur, Strasbourg).

8. My publications include over 200 articles on learning, behaviour, ecology, and welfare of prosimians, monkeys and apes, including over 100 peer-reviewed empirical and review articles in scientific journals including: *American Journal of Primatology*, *Animal Behaviour*, *Animal Cognition*, *Animal Welfare*, *Cognition*, *Current Biology*, *Folia Primatologica*, *Journal of Comparative Psychology*, *Journal of Human Evolution*, *Nature Communications*, and *PLoS Biology*. I have also written many chapters for edited volumes covering a range of topics ranging from animal husbandry and welfare to consciousness and cognition. Specific topics include: communication, abnormal behaviour, environmental enrichment, husbandry, attachment formation, correlates of social dominance, responses to mirror-image stimulation, self-awareness, tool-use, social organisation, sleep, learning and memory, effects of ageing, behavioural inhibition and self-control, and third-party social evaluation in primates. I have made several documentary films about primate behaviour, and several of my research projects have received international media attention (radio, television, printed press, internet).

9. I have given invited lectures or been invited speaker in symposia in psychology and primatology in Belgium, England, France, Germany, Italy, Japan, Netherlands, Scotland, Switzerland, and USA. I have served as External Examiner for doctoral theses on primate behaviour in Australia, Denmark, England, France, Germany, The Netherlands, and Scotland.

10. My Curriculum Vitae sets forth my educational background and experience and is annexed to my original Affidavit, filed herewith.

Basis for Opinions

11. The opinions in this Affidavit are based on my own work as well as accumulated knowledge from over 35 years of hands-on research and teaching about the behaviour of nonhuman primates; this includes my knowledge of peer-reviewed literature about primatology published in respected journals, periodicals and scholarly books.

12. A full reference list of peer-reviewed literature cited herein is annexed hereto.

Opinions

13. The close evolutionary relationship between chimpanzees (and the closely related bonobos) and humans is evident not only in terms of physical structure but also in behaviour, emotional and mental processes. No other species comes so close to humans in self-awareness and language abilities, and in richness and diversity of behaviours such as tool-use, gestural communication, social learning, social awareness, and reactions to death.

14. Chimpanzees were the first nonhuman species shown to be capable of mirror-mediated self-recognition (Gallup, 1970). Among nonhumans, the evidence for self-recognition - widely accepted to require the ability to hold a mental representation of what one looks like from another visual perspective - is indisputably strongest for chimpanzees and other great apes (Anderson & Gallup, 2011; 2015). The developmental emergence of self-recognition in

chimpanzees is similar to that in humans (Lin, Bard & Anderson, 1992). Furthermore, as in humans, self-recognition in adult chimpanzees is highly stable across time, with some decline in old age (de Veer et al., 2003).

15. Chimpanzees show “community concern,” and concern for individuals. The capacity for self-recognition, which indicates cognitive self-awareness, has been linked to empathic abilities (Gallup, 1982), defined as identifying with and understanding another’s situation, feelings and motives. Chimpanzees are capable of highly developed empathic abilities (de Waal, 1990). They surpass other species in terms of concern for others’ welfare, as shown when individuals console an unrelated victim of aggression by a third-party (de Waal & Aureli, 1996). High-ranking individuals in groups may take on the role of policing – defined as impartial interventions in conflicts by bystanders – to ensure group stability (von Rohr et al., 2012). Wild chimpanzees may adopt orphans, even if the latter are not genetically related to the adopter (Boesch et al., 2010). Individuals may make numerous behavioural adjustments -- sometimes markedly so -- in order to ensure the welfare of injured or disabled members of the group (Matsumoto et al., 2015).

16. Chimpanzees assume specific duties and responsibilities within their society. When crossing a potentially dangerous road, stronger and more capable adult males investigate the situation before more vulnerable group-members, waiting by the roadside, venture onto the road. The males remain vigilant while taking up positions at the front and rear of the procession (Hockings, Anderson & Matsuzawa, 2006). At Bossou, Guinea, adult male chimpanzees are significantly more likely than other age-sex classes to raid human-cultivated crops near villages; these foods are then taken back into the forest and shared with more timid capable members of the community, who hang back and allow the males to raid (Hockings et al., 2007). In many

localities in Africa, adult male chimpanzees regularly patrol the boundaries of their community's territory; encounters with members of a neighbouring community may result in violent, even lethal aggression. Males engage in patrols with partners who are especially likely to be other males with whom individuals groom and form intra-community coalitions, in other words, individuals that can be trusted for support in the event of aggression breaking out (Watts & Mitani, 2001) (see below for experimental evidence for assessment of trustworthiness). Wild chimpanzees will call to warn approaching friends about the presence of a potentially dangerous object that the latter is unaware of (Schel et al., 2013). These examples indicate the existence of well-defined roles within the community and mutual expectations about how individuals should behave in a range of situations.

17. Chimpanzees cooperate, and understand each other's roles. Experiments in captivity have established that chimpanzees can be trained (Crawford, 1937) or can learn spontaneously (Melis, Hare & Tomasello, 2006a; Suchak et al., 2014) to work collaboratively with at least one other individual to solve a common problem that cannot be solved by a single individual. After experiencing working alongside two different collaborators, chimpanzees prefer to work with a collaborator who has proved more effective in the past (Melis et al., 2006b); thus they attribute different degrees of competence to other individuals. In many cooperation tasks the outcome is that each partner receives a reward such as food. However, immediate reward is not a prerequisite for cooperation: if one chimpanzee sees another trying to solve a problem and can also see the problem, the former may provide the precise tool that the latter requires, especially - but not only - if the latter requests the tool (Yamamoto, Humle & Tanaka, 2012; Melis & Tomasello, 2013). Notably, such helping persists even in the absence of reciprocation by the tool-user: chimpanzees continue to help partners in need of help despite receiving no obvious

reward (Yamamoto, Humle & Tanaka, 2009). Similarly, when young chimpanzees observe a human trying to retrieve an out-of-reach object, they sometimes spontaneously retrieve the object and give it to the human although they receive no reward for doing so (Warneken & Tomasello, 2006, Warneken et al., 2007). Chimpanzees will also perform a newly acquired skill (pulling a chain to open a door) so that another chimpanzee can gain access to food; again, the helper obtains no obvious payoff in this situation (Warneken et al., 2007).

18. Chimpanzees reward others, and keep track of others' acts and outcomes. Wild chimpanzees cooperate when hunting. When a subgroup of chimpanzees moves into hunting mode in the presence of monkeys, individuals take up positions in trees or on the ground corresponding to different roles such as chaser and blocker. If the hunt is successful, a monkey will eventually be caught and killed by one of the group of hunters. In the Tai Forest, all participants in a successful hunt then receive a share of the meat from the possessor (Boesch and Boesch-Acherman, 2000). A study of more than 4,600 interactions over food in a captive chimpanzee group recorded remarkably balanced exchanges of food between individuals: not only did food exchanges occur in both directions, individuals were more likely to share with another chimpanzee who had groomed them earlier that day. The observed pattern of grooming and food transfers suggested the presence of reciprocal obligations (de Waal, 1989).

19. In captivity, when presented with an ultimatum game in which both partners needed to cooperate in order to split available rewards equally, chimpanzees and 3-year-old human children behave similarly: both perform in a way that ensures a fair distribution of rewards (Proctor et al., 2013). Other studies have shown that human adults also behave fairly in similar situations. In a trust game in which two chimpanzees can take a small reward for themselves or send a larger reward to a partner and trust that the partner will return some of it,

chimpanzees spontaneously trust each other. Furthermore, they flexibly adjust their actions in the game depending on the degree of trustworthiness of the partner (Engelmann, Hermann and Tomasello, 2015).

20. Chimpanzees prefer fair exchanges. In the well-known inequity aversion procedure, a subject and a partner each exchange a token with an experimenter, who in turn rewards each individual with a food item. Two chimpanzees will take turns exchanging with the experimenter as long as the value of the reward that each receives is the same. But when one chimpanzee sees the partner receive a higher-value reward for completing the same exchange (e.g., partner receives a grape, subject receives a small piece of cucumber), she is likely to either refuse to accept the reward or refuse to return the token. In other words, they are intolerant of unfair treatment. Furthermore, as in humans, chimpanzees' responses to reward inequity may vary with the quality of the relationship between subject and partner: they react less emotionally to unfairness if the partner is a close friend or relative (Brosnan, Schiff, & de Waal, 2005).

21. Chimpanzees readily understand social roles and intentions. In Premack and Woodruff's (1978) pioneering study, a chimpanzee was presented with videotaped scenes of a human actor faced with different problems, for example trying to reach inaccessible food, or trying to listen to a gramophone record. When given a choice between a photograph of the solution to a problem (e.g., a stick with which to reach the food, or record player plugged in) alongside decoy photographs (e.g., irrelevant objects, or a gramophone cable plugged in but cut), the chimpanzee consistently chose the correct solution, i.e., that which the actor in the videos required to solve his problem.

22. Chimpanzees distinguish between individuals who have harmful versus prosocial intentions. They will point toward the one of two locations that is baited with hidden food if this

results in a naïve, cooperative human finding the food and sharing it with the chimpanzee. (Chimpanzees in the wild have a communicative repertoire of more than 60 distinct nonverbal gestures: Hobaiter and Byrne, 2014). But they also learn to point deceptively in the presence of a non-cooperative, selfish human – deliberately directing him toward the wrong location (Woodruff & Premack, 1979). Chimpanzees discriminate between prosocial and antisocial individuals based not only on how those individuals behave toward the chimpanzees themselves, but also based on their treatment toward third parties: generous individuals are preferred to selfish individuals (Subiaul et al., 2008).

23. Chimpanzees can adapt quickly to role-reversal in cooperative tasks. In one study, chimpanzees were either trained to follow a human's pointing gesture in order to find food, or trained to gesture to direct a naïve human toward hidden food. Once this relationship was established, the roles were reversed: indicator chimpanzees now became the recipients of the communicative gesture, while previous recipients were now required to actively point for the human. Unlike monkeys, for whom spontaneous role reversal appears very difficult, three quarters of the chimpanzees tested showed immediate comprehension of the changing roles and performed appropriately (Povinelli, Nelson and Boysen, 1992). In conversations with a human, American Sign Language-trained chimpanzees took turns appropriately, and as in humans their conversational turn-taking developed with experience (Hartmann, 2011).

24. Based upon my research and knowledge of nonhuman primate behaviour, including the studies reviewed here, I conclude that chimpanzees understand their own and others' roles in their daily interactions. They show concern for others' welfare, and they have expectations about appropriate behaviour in a range of situations, i.e. social norms. This applies to their interactions with conspecifics, and their interactions with humans. I believe that the

weight of evidence suggests the existence of duties and responsibilities within chimpanzee communities.

CITY OF LEIPZIG)

Christophe Boesch being duly sworn, deposes and says:

Introduction and Qualifications

1. My name is Christophe Boesch. I received a Maturite scientifique from College Calvin, Geneve in 1970, a Diplome de biologiste from the University of Geneva, Switzerland in 1975, and a Ph.D. from the University of Zurich, Switzerland in 1984. I work and reside in Leipzig, Germany.

2. I submit this Affidavit in support of Petitioner, The Nonhuman Rights Project, Inc.'s ("NhRP"), petition for a writ of habeas corpus on behalf of Kiko. I am a non-party to this proceeding.

3. I am currently an Honorary Professor in the Department of Zoology at the University of Leipzig, Germany where I have been a member of the faculty for 14 years. I am also the Director of the Max Planck Institute of Evolutionary Anthropology, and Founder and President of the Wild Chimpanzee Foundation. I have directed 16 diploma theses, 32 Ph.D. theses for both European and American students, and the post-doctoral work for 12 students. I have also regularly taught classes in Behavioural Ecology, Evolutionary Biology, and Population Biology in the 22 years that I have been teaching.

4. I have twice been awarded the Great Apes Fellowship of the Leakey Foundation in Pasadena, California. In addition, I received the Prix Cortailod for talented Swiss scientists under 35 years old from the University of Neuchâtel, Switzerland, and was awarded the Medal "Officier de l'Ordre National" by the president of Côte d'Ivoire Alassane Ouattara in 2013.

5. I have been a member of the International Primate Protection League, the IUCN/SSC Primate Specialist Group, and the International Primatological Society since 1986. I am also currently a member of: (1) the Behavior and Brain Sciences Associates (since 1991); (2) the Pan Africa News Editorial Board (since 1997); (3) Steering Committee of the World Heritage Species Status Taskforce (since 2002); and (4) the IUCN/SSC/ Section of the Great Apes (since 2003). Additionally, I am the Co-chairman of the Scientific Committee of the Great Apes Survival project of the UNEP/UNESCO (since 2003). I previously served as a: (1) scientific board member of the Fyssen Foundation, Paris (1985-1989); (2) consultant to the World Wide Fund for Nature International (1987-1988); (3) Project Coordinator for the World Wide Fund for

Nature International in the Taï National Park, Ivory Coast (1988-1992); (4) executive council member of the Committee for the Care and Conservation of Chimpanzee (1988-1992); and (5) member of the Society for the study of Animal Behaviour (1993-1998).

6. During my career, I have served as a grant reviewer for the following institutions and foundations: NIH, National Science Foundation (USA), Swiss National Science Foundation, Leakey Foundation, National Geographic Society, Fulbright Foundation, and Wenner-Gren Foundation. Additionally, I have served as an ad hoc reviewer for a number of prominent peer-reviewed journals including: *Behavioural and Brain Sciences*, *Animal Behaviour*, *Nature*, *Behaviour*, *Ethology*, *Primates*, *International Journal of Primatology*, *American Journal of Primatology*, *Folia Primatologica*, *American Journal of Physical Anthropology*, *Current Anthropology*, *Behavioural Ecology*, *Proceedings of the National Academy Science, Series B*, *Quarterly Review of Biology*, *American Naturalists*, *Journal of Human Evolution*, *Proceedings of the Royal Society: Biological Sciences*, and *Journal of Evolutionary Biology*.

7. I have specialized in the study of wild chimpanzees for approximately 35 years. In 1976, I spent 8 months in the Taï National Park, Ivory Coast conducting a preliminary study on the behaviour of wild chimpanzees. I have completed on-going studies of these chimpanzees since 1979. My research on these chimpanzees has principally focused on ecology, social organisation, tool-use, hunting, cooperation, food-sharing, inter-community relationships and cognitive capacities. I also conducted a comparative field study on the chimpanzees of Gombe Stream National Park, Tanzania in 1990 and 1992 (April to July). In 1999 (August to October), I undertook a comparative field study on the chimpanzees of the Mahale Mountains National Park, Tanzania.

8. I have authored or co-authored 14 books on primate behavior, cognition, and evolution. Some of the most relevant include: (1) *Tool Use in Animals - Cognition and Ecology* (2013, Cambridge: Cambridge University Press); (2) *Wild Cultures: A Comparison between Chimpanzee and Human Cultures* (2012, Cambridge: Cambridge University Press); (3) *The Real Chimpanzee: Sex Strategies in the Forest* (2009, Cambridge: Cambridge University Press); (4) *Feeding Ecology in Apes and Other Primates* (2006, Cambridge: Cambridge University Press); (5) *Regional Action Plan for Chimpanzees and Gorillas in West Equatorial Africa* (2005, Washington: Conservation International); (6) *Behavioural Diversity in Chimpanzees and Bonobos* (2002, Cambridge: Cambridge University Press); and (7) *The Chimpanzees of the Tai Forest: Behavioural Ecology and Evolution* (2000, Oxford: Oxford University Press).

9. Since 1978, I have published at least 215 articles on the cognitive and learning capabilities, intelligence, communication, or language skills of apes and chimpanzees specifically. These articles are published in many of the world's most-cited peer-reviewed scientific journals, including: *Science*, *Nature*, *Current Biology*, *Journal of Comparative Psychology*, *Conservation Biology*, *American Journal of Primatology*, *International Journal of Primatology*, *Ecology and Evolution*, *Animal Behaviour*, *Journal of Human Evolution*, *American Journal of Physical Anthropology*, *Animal Cognition*, *Journal of General Virology*, *Folia Primatologica* (the official journal of the European Federation for Primatology), *Biological Conservation*, *Molecular Ecology*, and *Natural History*. I have also published articles in *The Oxford Handbook of Comparative Evolutionary Psychology*, *Proceedings of the National Academy of Sciences* and in *Proceedings of the Royal Society B*. Several articles of mine have also appeared in *BBC Wildlife Magazine*. Specific topics of these publications include: ecology and cognition of tool use in chimpanzees, chimpanzee culture, meat eating and hunting

specialization in chimpanzees, botanical skills in chimpanzees, long-term spatial memory in chimpanzees, chimpanzee conservation, female gregariousness in chimpanzees, social behavior and cognition in primates, habitat use and competitive exclusion among sympatric chimpanzee, gorilla and elephant, cultural differences between neighboring chimpanzee communities, reciprocity and trades in wild chimpanzees, locomotion and tool-use in chimpanzees, altruism in forest chimpanzees, adoption in chimpanzees, paternity and social rank in wild chimpanzees, feeding competition in chimpanzees, male aggression and sexual coercion in chimpanzees, reciprocation of grooming in chimpanzees, vocal, gestural and locomotor responses of wild chimpanzees to intruders, chimpanzee population size, social bonds in chimpanzees, sophisticated Euclidean maps in forest chimpanzees, integration of chimpanzee and human culture, wild ape health, infant mortality cycles in chimpanzees, sexual swelling cycles in chimpanzees, food choice in chimpanzees, paternity in wild chimpanzees, locomotor behavior in chimpanzees, cooperative hunting in chimpanzees, bisexually-bonded ranging in chimpanzees, group-specific calls in chimpanzees, effects of community size on wild chimpanzees social organization, decision-making in conflicts of wild chimpanzees, mortality rates in chimpanzees, female reproductive strategies, buttress drumming by wild chimpanzees, innovation in wild chimpanzees, predator-prey systems in chimpanzees, nut cracking in wild chimpanzees, handedness in chimpanzees, symbolic communication in wild chimpanzees, teaching in wild chimpanzees.

10. My Curriculum Vitae sets forth my educational background and experience and is annexed to my original Affidavit, filed herewith.

Basis for Opinions

11. The opinions I state in this Affidavit are based on my professional knowledge, education, training, and 37 years of research and field work with chimpanzees, as well as my knowledge of peer-reviewed literature about primatology published in the world's most respected journals, periodicals and books that are generally accepted as authoritative in the field of primatology, many of which were written by myself and colleagues with whom I have worked for many years and with whose research and field work I am personally familiar.

12. A full reference list of peer-reviewed literature cited herein is annexed hereto.

Opinions

13. Scientific knowledge about chimpanzees is vast and has been increasing at an exponential rate. We must therefore be aware that what we know now is still only a small fraction of what chimpanzees are capable of.

14. Here I discuss several areas particularly relevant to the ability of chimpanzees to bear duties and responsibilities as evidenced by the social obligations that chimpanzees fulfill in their social life in the wild.

Cooperation and Group belonging: Solidarity in between-group contexts

15. Territories are aggressively defended in all chimpanzee populations that have been studied and the participants in patrols controlling the borders are mainly the adult males. Whenever intruders are spotted, males on a voluntary basis converge to defend their territory as a team (Goodall 1968, Mitani et al. 2002, Boesch and Boesch-Achermann 2000). If not enough males are present, the firsts silently sit down and wait for other group members to join. Only once a large enough group is built are they going to confront the others (Boesch and Boesch-Achermann 2000, Boesch et al. 2009, Boesch 2009). This reveals some expectations about the social participations of group members.

16. Impressive supports by male group members are provided to rescue isolated individuals that have been taken prisoner by intruders (Goodall et al. 1979, 1986, Boesch 2009, 2012). Outnumbered individuals during intergroup encounter were observed to sustain severe injuries in 40% of the cases, leading to death in 15% of the severe attacks (Mitani et al. 2002, Boesch et al. 2008). In one example in the Tai forest, a single adult male with an adopted infant on his back rushed for 600 meters to rescue an adult female from his group that was trapped and beaten up by 5 male intruders. His appearance created enough of a havoc to allow the female to escape. In Tai chimpanzees, such risky supports are provided in 28% of the intergroup encounters (Boesch et al. 2008). This spontaneous high level of altruism toward group members in this chimpanzee population reveals the sense of obligation felt by them to help and protect one another.

Cooperation and Group belonging: Within-group solidarity

17. Help and tending of injured group members: Tai chimpanzee group members have been seen to help and tend the injuries of wounded individuals for extended periods of time (see also my previous affidavit). What is striking in this helping of others is that upon hearing the alarm calls of an attacked individual (through a leopard or another chimpanzee), the males hearing the calls within seconds would make loud supporting whaa-barks, reassure one another and rush towards to caller to help. The rapidity of the help is decisive in the case of a leopard attack (Boesch 1991, 2009). I have always seen all males visibly present in rush to support, so as if this within-group solidarity was obvious to them. If callers had sustained injuries, the rescuers and other group members would converge towards the injured and clean and lick the wounds for many hours, and in some cases such help would extended for many days as long as the wounds were not healed and presented a risk of infection.

18. Important social contributions are rewarded in hunting context: The striking fact in the hunting context is the very high level of cooperation between the males that act as a team to capture small monkeys up in the trees (Boesch and Boesch 1989, 2000, Boesch 2002, 2009, Mitani et al. 2002). In Tai, once a capture has been made, the meat-sharing rules favor the hunters; males receive more meat if they participated in the hunt and even more so if they made an important contribution to the hunt (Boesch 1994, 2002, 2009). What is intriguing is that hunting roles requiring anticipation of the prey movements are as equally well rewarded as capturing the prey, even if the individuals doing such movements were not making a capture. Somehow, the group members realize that anticipating a prey is an essential part of a successful hunting team and they value this equally high than the one doing the capture itself (Capturing the prey and performing complex anticipation ensures the same amount of meat, Boesch 2002). Less important hunting movements, such as chasing or driving the prey, are not valued so highly by other group members, as they rarely make a decisive contribution to the capture (Boesch 2002, 2012). This higher social valuing of hunting contribution by other group members allows for this cooperative system to be stable (Boesch 1994, Packer and Rutan 1988, de Waal 1996).

19. Punishment is part of the meat sharing rules: The rewarding of certain action leads to the passive punishment of individuals that are looking to access meat, but because they did not contribute to the hunt are only meagerly receiving some: Individuals that were present during the hunt but did not participate in it, received 2.6 times less meat than hunters (Boesch 2002, 2009). This rewarding of one's hunting contribution is often in conflict with dominance hierarchy (as dominant males are not always present during a hunt or simply not hunting), and despite the impressive and sometimes violent attempts by the dominant males to access the meat, hunters will be reliably allowed access to more meat by the sharing group (This observation

applies only to the Tai chimpanzees and not to other chimpanzee populations where the meat sharing patterns follow different rules [e.g. Goodall 1986, Nishida et al. 1992, Uehara et al. 1992, Watts and Mitani 2002]). Regularly, we see dominant males, which want to access meat, display violently towards meat eaters, but access to meat is denied by the group of chimpanzees present (Boesch and Boesch 1989). In other feeding contexts, like in fruiting trees or when large amounts of fruit are clustered on the ground, alpha males can ascertain their priority of access; Only in meat eating is his access denied or limited, when he did not participate in the hunt.

20. Informing group members about danger: Chimpanzees have demonstrated a high sense of solidarity towards ignorant group members, which they would inform about the presence of a danger, like a snake for example. In a neat series of experiments, it was possible to show that if a chimpanzee discovers a snake near a path and he is followed at some distance by another chimpanzee that is ignorant about the danger, the first individual will make alarm calls until the follower sees the danger. In addition, he will position himself such that his body is pointing towards the snake. If, however, he is followed by a chimpanzee that is aware of the presence of the snake, he will remain silent (Crockford et al. 2012). This was observed with chimpanzees living in the Budongo forest in Uganda. This reveals that such a high sense of within-group solidarity is not restricted to one population or a response to one specific environmental condition, but is more a general property of social life in chimpanzees.

21. High investment to support weak individuals: Evidence from both captive and wild chimpanzees indicates that they are capable of highly developed empathic abilities (de Waal, 1990). Young chimpanzees are breast-fed and cared for 5 years by their mothers, so that when they loose them they remain especially vulnerable. Adoption of orphans is rather common in chimpanzees, and as seen in other primate species, females are often doing the adoption of

orphans (Goodall 1986, Riedman 1982, Thierry and Anderson 1987). In Tai chimpanzees, we observed that half of the adoptions were done by adult males, which was intriguing, and in a few cases we could show that they were not genetically related to the adopted ones (Boesch et al. 2010). Adoption is a very costly behaviour as it may require carrying the infant over long distances for days and months, sharing the nest and food with them and protecting them in cases of social squabbles.

22. Based upon my research and expertise in this field, I support the NhRP's petition for a writ of habeas corpus on behalf of Kiko and the application of common law personhood to chimpanzees.

Christophe Boesch

Jane Goodall being duly sworn, deposes and says:

Introduction and Qualifications

1. My name is Jane Goodall. I am the founding director and president of the Jane Goodall Institute, UN Messenger of Peace, primatologist, ethologist, and anthropologist. I received a Ph.D in Ethology from Cambridge University in 1966 and have been awarded honorary degrees from 45 Universities from nearly every continent, including institutes of higher learning in Africa, Asia, Europe, North America, and South America.

2. I submit this Affidavit in support of Petitioner, The Nonhuman Rights Project, Inc.'s ("NhRP"), petition for a writ of habeas corpus brought on behalf of Kiko. I am a non-party to this proceeding.

3. In 1977, I founded the Jane Goodall Institute, which is considered a global leader in the effort to protect chimpanzees and their habitats. The Institute is widely recognized for innovative, community-centered conservation and development programs in Africa, and the "Jane Goodall's Roots & Shoots" program is a global environmental and humanitarian youth program comprised of nearly 150,000 members in more than 120 countries. Although the majority of my career was spent completing field research on chimpanzees in Tanzania, I have been appointed the following academic positions (in reverse chronological order): (1) Visiting Professor, Department of Psychiatry and Program of Human Biology, Stanford University; (2) Honorary Visiting Professor in Zoology, University of Dar es Salaam, Tanzania; (3) Adjunct Professor of the Department of Environmental Studies, Tufts University, School of Veterinary Medicine; (4) Distinguished Adjunct Professor, Departments of Anthropology and Occupational Therapy, University of Southern California; and (5) Andrew D. White Professor-at-Large, Cornell University.

4. During my career I have received over 100 awards from a variety of wildlife conservation, academic, media, government, and nongovernment organizations. Most notably, I received the Kyoto Prize in Basic Science in 1990, the United Nations "Messenger of Peace Appointment," was named a Dame of the British Empire in 2002, awarded the French Legion of Honor in 2006, the United Nations Educational, Scientific and Cultural Organization's Gold Medal Award in 2006, and the United States Department of the Interior, Secretary's Lifetime Achievement Award in 2009. Other awards that I have received include: (1) the Centennial

Award from the National Geographic Society in 1988; (2) the Anthropologist of the Year Award in 1989; (3) the Edinburgh Medal, UK in 1991; (4) the Rainforest Alliance Lifetime Achievement Award in 1993; (5) the Commander of the British Empire, presented by Her Majesty Queen Elizabeth II in 1995; the National Science Board Public Service Award in 1998; (6) the International Peace Award in 1999; (7) the Harvard Medical School's Center for Health and the Global Environment award in 2003; (8) the Nierenberg Prize for Science in the Public Interest in 2004.

5. I have been affiliated with 90 wildlife, conservation, humanitarian, professional and governmental organizations. The most relevant include: (1) Member of the Board of the Orangutan Foundation since 1994; (2) President of Advocates for Animals from 1998 to May 2008; (3) Member of the Board, Save the Chimps / Center for Captive Chimpanzee Care from 2000 to 2007; (4) Member of the Honorary Board, Albert Schweitzer Institute since 2003; (5) Member of the Advisory Board, Initiative for Animals and Ethics, Harvard University since 2004; (6) Member of the Advisory Board, Chimps Inc., from 2005; (7) Honorary Board, Center for Great Apes since 2012; and (8) Member of the Board of Directors of the Nonhuman Rights Project, Inc. since 1996.

6. My research specialization is in the study of the behaviour and ecology of chimpanzees and baboons. Since 1960, I have conducted field research on chimpanzees and baboons beginning with my research on the behaviour of free-living chimpanzees in Gombe National Park, Tanzania. From 1967 to 2003 I served as the Scientific Director of the Gombe Stream Research Center in Tanzania. From 1972 to 2003, I also served as the Director of Research on the behaviour of the olive baboon at the Gombe National Park, Tanzania.

7. I have written or co-authored more than 30 books, including: (1) *My Friends the Wild Chimpanzees* (1967, National Geographic Society); (2) *In the Shadow of Man* (1971, Boston: Houghton Mifflin; London: Collins); (3) *The Chimpanzees of Gombe: Patterns of Behaviour* (1986, Harvard University Press); (4) *Through a Window: My Thirty Years with the Chimpanzees of Gombe* (1990, London: Weidenfeld & Nicolson; Boston: Houghton Mifflin); (5) *Visions of Caliban* (1993, Boston: Houghton Mifflin); (6) *Brutal Kinship* (1999, New York: Aperture Foundation); (7); *Reason For Hope: A Spiritual Journey* (1999, Warner Books, Inc); (8) *The Ten Trusts: What We Must Do To Care for the Animals We Love* (2002, San Francisco: Harper San Francisco); (9) *Harvest for Hope: A Guide to Mindful Eating* (with Gary McAvoy and Gail Hudson)(New York: Warner Books); (10) *2005 50 Years at Gombe* (2010, New York: Stewart, Tabori, and Chang); (11) *Hope for Animals and Their World: How Endangered Species Are Being Rescued from the Brink* (with Thane Maynard and Gail Hudson)(2009, New York: Grand Central Publishing); (12) *Seeds of Hope: Wisdom and Wonder from the World of Plants* (with Gail Hudson)(2014, New York: Grand Central Publishing). Additionally, *In the Shadow of Man* was translated into 48 different languages, while *Through a Window: My Thirty Years with the Chimpanzees of Gombe*, and *Reason for Hope: A Spiritual Journey* were translated into 15 and 13 languages respectively. *Visions of Caliban* was honoured by the New York Times as a “Notable Book” for 1993, as well as Library Journal, which awarded it “Best Sci-Tech Book” for 1993.

8. Since 1963, I have been featured in approximately 20 science-related films, produced by networks including the National Geographic, HBO, BBC, PBS, Animal Planet / Discovery Communications. HBO’s film “Chimps, So Like Us” was nominated for the 1990 Academy Award.

9. I have published more than 80 articles, including peer-reviewed articles in the world's most-cited scientific journals: *Nature*, *Science*, *The American Journal of Psychiatry*, *The American Journal of Physical Anthropology*, *The American Journal of Primatology*, *The International Journal of Primatology*, *Conservation Biology*, *The New York Academy of Science*, *Philosophical Transactions of the Royal Society*, *Folia Primatologica* (the official journal of the European Federation for Primatology), *Journal of Medical Primatology*, *Journal of Human Evolution*, *Primates*, *Journal of Virology*, *Zoological Society of London*, and *the Society for Reproduction and Fertility*. My articles have also been featured in *National Geographic* and *Science News*. These publications covered topics on the behaviour, ecology, welfare, and conservation of chimpanzees, baboons and other monkeys. Specific topics of these publications include: tool-use, diet, feeding behaviour, expressive movements, communication, play, reproductive behaviour, reproductive constraints on aggressive competition, mother-child bonds, culture, aggressive behaviour, predation, community behaviour, mortality, ranging patterns, continuities between chimpanzee and human behaviour, ecological factors, sleeping behaviour, cannibalism, competitive behaviour, inter-community interactions with humans, population dynamics, infanticide, innovative behaviour, shunning, skeletal biology, gene flow and evolution of chimpanzees, social structure, psychosocial needs, simian immunodeficiency virus, unusual violence, anogenital swelling in pregnant chimpanzees, appropriate conditions for maintenance of chimpanzees.

10. I regularly give lectures and take part in international symposia on primatology. I currently spend more than 300 days out of the year travelling around the world speaking on primate issues.

11. My Curriculum Vitae sets forth my educational background and experience and is annexed hereto.

Basis for Opinions

12. The opinions I state in this Affidavit are based on my professional knowledge, education, training, and over 50 years of observing and writing about chimpanzees, including my 45-year study of social and family interactions in the wild chimpanzees of Gombe Stream National Park, Tanzania and my continuing work on chimpanzee behaviour, welfare and conservation through the Jane Goodall Institute.

Opinions

13. The long-term nature of the research I conducted on wild chimpanzees in Gombe Stream National Park provided a unique opportunity to observe and study the lives of chimpanzees in nature over many years and generations. During this period of continuous study my colleagues and I have learned much of enormous significance about chimpanzee psychology and society.

14. There is ample proof from studies of chimpanzee behavior, both in the wild and in captivity, that chimpanzees have well-defined duties and responsibilities. Following are some examples.

15. The duties and responsibilities of a mother towards her offspring are many and often onerous. For three years the infant is dependent on breast milk, and continues to suckle though less often for the next two years until the next baby is born. Throughout this period the mother continues to carry the infant, at first clinging to her belly and then riding on her back. During this time the mother waits for the child before moving off. And she constructs a nest large enough for herself and her child until the next baby is born.

16. The mother's duties and responsibilities do not end when a new infant is born. For the next couple of years she still waits for the older child before moving from one place to another. When the older child is male, he is often anxious to join groups of adult males, particularly when there is a lot of excitement. Mothers with small infants often prefer to avoid such groups. Sometimes a mother, after setting off in her chosen direction, stops when her six-year-old son whimpers and refuses to follow, going some distance towards the males. Each time she moves, he cries louder. Some mothers then give in, and join the males in order to provide support for their sons.

17. An important component of maternal responsibility is to provide support for her child. During a play session her infant sometimes gets hurt and screams – the mother will hasten to support her child, reprimanding the rough playmate even though this may entail retaliation from a more dominant mother.

18. There have been many instances when mothers have gone to help their fully-grown offspring.

19. In the wild the father plays no role in family life. We can now determine paternity from DNA profiling of fecal samples, but as a female may be mated by most or all males during periods of receptivity, it seems unlikely that a male recognizes his own biological offspring. However, most adult males of a community act in a paternal way to all infants in their community, rushing to their aid when necessary. On one occasion two hunters (human) shot a female chimpanzee, seized her infant, and tried to push it into a sack. As the infant screamed, a male chimpanzee rushed out of the forest, attacked the two men, grabbed the baby, and disappeared into the forest. Both hunters ended up in hospital. There are many other tales of

adult males protecting – or trying to protect – infants from hunters across Africa. Tragically they often get killed themselves.

20. Juveniles and adolescents very frequently act responsibly towards their infant siblings. (When I refer to ‘brother’ and ‘sister’ I mean maternal brother and sister.) One nine-year-old female, who had run in terror from a large poisonous snake, nevertheless climbed down from her tree to gather up and carry to safety her three-year-old brother, who seemed unaware of the danger. A different adolescent female prevented her infant brother from following their mother when the trail passed through a clump of tall grasses. He screamed loudly, but she persisted until the grasses were behind them – I examined the place – it was infested with tiny ticks. (Subsequently the mother sat picking ticks off herself for a long time.)

21. An older sibling will almost always adopt an infant if their mother dies. Under the age of three the infant, dependent on breast milk, will die. One five-year-old male carried his one and a half year old sister around until she died, a few months later. Older infants usually survive when they are adopted. This responsibility is clearly not socially advantageous for the young caregiver, who spends a lot of time and energy carrying out his or her duties.

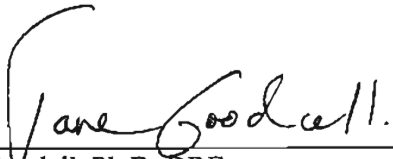

22. We now know that unrelated individuals may adopt orphaned infants. At Gombe a 12-year-old adolescent male cared for a three and a half year old male orphan, and definitely saved his live. His sense of responsibility was most impressive when he ran to seize the orphan when he got too close to socially roused males – despite the fact that adolescent males normally keep well away from the adult males at such times. He often got beaten up for his altruistic behavior, but this did not prevent him from acting in the same way the next time his help was needed.

23. The adult males of a community are responsible for patrolling their territory, chasing away or attacking individuals from neighboring communities – this serves to protect and sometimes increase resources for their own females and young. This requires close cooperation and gang attacks. Even two males who may be engaged in challenging each other for social dominance within the community will join in an attack on a stranger.

24. None of the many field staff, students and other researchers who have worked among the Gombe chimps for 55 years have ever been really harmed. We have been hit, stamped on and dragged during displays, but never received bite wounds. One male in particular, Frodo, was continually charging people and hitting them, and he sometimes pushed me over. It is clear, however, that the chimpanzees only intend to impress, to emphasize their superiority. They could so easily harm us badly, even kill us. On three separate occasions, when I was above a very steep drop, Frodo charged up but did not make contact. Our videographer, Bill Wallauer, reported four such occasions. It was very clear to us that Frodo understood what would have happened on those seven occasions. The same thing happened to me once with a different alpha male. They are clear examples of intention *not* to harm.

25. I have written about a male chimpanzee in captivity who rescued his human caretaker, Mark Cusano, with whom he had a close relationship, from a very bad attack from three adult females. Mark told me that the chimp had saved his life.

26. Based upon my research and expertise in this field, I support the NhRP's petition for a writ of habeas corpus on behalf of Kiko and the application of common law personhood to chimpanzees.

Jane Goodall, Ph.D, DBE

the Jane Goodall Institute

Curriculum Vitae
Jane Goodall, Ph.D., DBE
Founder, the Jane Goodall Institute
UN Messenger of Peace
www.janegoodall.org

Personal

Date of Birth: 3rd April 1934
Nationality: British
Marital Status: Married to Baron Hugo van Lawick, 1964 (divorced);
Married to Hon. Derek Bryceson, M.P., 1975 (widowed)
Children: Hugo Eric Louis van Lawick (1967 -)

Education

1950 School Certificate (London) with Matriculation Exemption
1952 Higher Certificate (London)
1962 Entered Cambridge University, United Kingdom, as Ph.D. candidate in Ethology
under Professor Robert Hinde
1966 Ph.D. in Ethology, Cambridge University, United Kingdom

Research

From 1960 Behavior of free-living chimpanzees in Gombe National Park, Tanzania
1968-1969 Social behavior of the spotted hyena, *Crocutta crocutta*, Ngorongoro
Conservation Area, Tanzania
1967-2003 Scientific Director of the Gombe Stream Research Centre, Tanzania
1972-2003 Director of research on the behavior of the olive baboon, *Papio anubis*,
Gombe National Park, Tanzania

Academic Appointments

1971 – 1975 Visiting Professor, Department of Psychiatry and Program of Human Biology, Stanford University, Calif., USA

From 1973 Honorary Visiting Professor in Zoology, University of Dar es Salaam, Tanzania

1987 – 1988 Adjunct Professor of the Department of Environmental Studies, Tufts University, School of Veterinary Medicine, Boston, Mass., USA

1990 Associate, Cleveland Natural History Museum, Cleveland, OH, USA

1990 Distinguished Adjunct Professor, Departments of Anthropology and Occupational Therapy, University of Southern California, Calif., USA

1996 – 2002 Andrew D. White Professor-at-Large, Cornell University, NY, USA

Professional Affiliations

From 1974 Trustee, L.S.B. Leakey Foundation, USA

From 1976 Trustee, the Jane Goodall Institute for Wildlife Research, Education and Conservation, USA

From 1981 Scientific Governor, Chicago Academy of Sciences, USA

From 1984 International Director, ChimpanZoo (research program involving zoos and sanctuaries worldwide), USA

From 1987 Vice President, the British Veterinary Association's Animal Welfare Institute, UK

From 1988 Trustee, Jane Goodall Institute, UK

From 1989 Director, Humane Society of the United States, USA

From 1990 Member of the Advisory Board, Advocates for Animals, UK

From 1991 Member of the Advisory Board, the Albert Schweitzer Institute for the Humanities, USA

From 1993 Trustee, the Jane Goodall Institute, Canada

From 1994 Member of the Board, the Orangutan Foundation, USA

From 1994 Member of the Advisory Board, Trees for Life, USA

From 1997 Founder, Whole Child Initiative, USA

From 1995 Member of the Advisory Board, International Dolphin Project and Dolphin Project Europe

From 1995 Member of Council of Advisors, Global Green, USA

From 1996 Member of Advisory Board, The Fred Foundation, Netherlands

From 1998 to May 2008 President, Advocates for Animals, UK

From 1999 Member of Advisory Board, The Orion Society, USA

From 2000 to 2007 Member of the Board, Save the Chimps/Center for Captive Chimpanzee Care, USA

From 2000 Co-founder of Ethologists for Ethical Treatment of Animals/Citizens for Responsible Animal Behavior, USA

From 2001 Member of the International Advisory Board, Teachers Without Borders, USA

From 2001 Member of Advisory Committee, RESTORE, USA

From 2001 Honorary Trustee, The Eric Carle Museum of Picture Book Art, USA

From 2001 Member of IPS Ad-Hoc Committee for the World Heritage Status for Great Apes

From 2001 Member of Board of Trustees, NANPA Infinity Foundation, USA

From 2001 Member of Board, North American Bear Center, USA

From 2001 Member of Advisory Board, Laboratory Primate Advocacy Group, USA

From 2001 Member of Advisory Board, Tech Foundation, USA

From 2001 Member of Honorary Committee, Farm Sanctuary, USA

From 2002 Member of Advisory Board, Rachel's Network, USA

From 2002 Member of the Board of Directors, The Cougar Fund, USA

From 2002 Scientific Fellow of the Wildlife Conservation Society, USA

From 2002 Member of Board of Directors, The Many One Foundation, USA

From 2002 Member of Board of Governors and Officers, For Grace, USA

From 2002 Member of Advisory Board, Dignity U Wear, USA

2002-2003 Papadopoulos Fellow, The Kinkaid School USA

From 2003 Member of the Honorary Board, Albert Schweitzer Institute, USA

From 2004 Member of Advisory Board, Initiative for Animals and Ethics, Harvard University, USA

From 2004 Honorary Patron, Ryan's Well Foundation, Canada

From 2004 Member of Advisory Board, MONA-Spain

From 2004 Member of the Advisory Council, The Spiritual Alliance to Stop Intimate Violence, USA

From 2004 Member of Honour Committee of Fundación Altarriba, Spain

From 2005 Member of International Advisory Board, Friends of Africa International, USA

From 2005 Member of Cincinnati Zoo Advisory Council, USA

From 2005 Member of Advisory Board, Chimps Inc., USA

From 2005 Member of Advisory Board, KidsRights, Netherlands

From 2005 Member of Advisory Board, MediSend, USA

From 2005 Member of Honorary Board, Quinnipiac University, USA

From 2006 Member of Advisory Board, Foundation for Natural Leadership

From 2006 Member of Advisory Board, Nuclear Age Peace Foundation, USA

From 2006 Honorary Member, Club of Budapest, Hungary

From 2006 Member of the Mothers Network, ENO, Finland

From 2006 Member of Board of Directors, National Institute for Play, USA

From 2007 Fellow, Wings WorldQuest, USA

From 2007 Member of Advisory Board, Gift of Life in America, Inc., USA

From 2007 Member of Advisory Board, The Heart of America Foundation, USA

From 2007 Member of Advisory Board, Project R&R: Release and Restitution for Chimpanzees in U.S. Laboratories, a campaign of the New England Anti-Vivisection Society, USA

From 2007 Member of Advisory Board, Save the Chimps, USA

From 2007 Member of Advisory Board, Slow Food Nation, USA

From 2007 Distinguished Fellow, Ewha Academy for Advanced Studies, Republic of Korea

From 2007 Member of Advisory Board, Human and KIND, USA

From 2007 Honorary Board Member, The Scholar Ship Research Institute, UK

From 2007 Member of Advisory Board, Climate Clean, USA

From 2008 Member of the Great Chapter, Grace Cathedral, CA, USA

From 2008 Honorary Board Member, Eagle Vision Initiatives, USA

From 2008 Honorary Patron, Comunidad Inti Wara Yassi, UK

From 2008 Honorary Fellow, Institute of Biology, UK

From 2008 Patron, Earth Charter-UK

From 2008 Special Advisor for Biodiversity, Prince Albert II of Monaco Foundation, Monaco

From 2008 Member of Council of Honour, Waldrappteam, Austria

From 2008 Member of the Board, Climate Change Center, Republic of Korea

From 2008 Patron, Julia's House, UK

From 2008 Member of the Honorary Committee, Alpine Peace Crossing, Austria

From 2008 Member of the Advisory Council, Ebola Vaccination Initiative

From 2008 Patron, Society of Theological Zoology, Germany

From 2008 Member of Celebrity Circle Board, Green Chimneys, USA

From 2009 Honorary Keeper of the Museum Tridentino of Natural Science, Italy

From 2009 Member of Advisory Board, EcoReserve, USA

From 2009 Honorary Fellow, Society of Biology, UK

From 2009 Member of Advisory Board, Goodplanet Foundation of Yann Arthus-Bertrand, France

From 2009 Member of Advisory Board as advisor for Biodiversity, Foundation Jacques Chirac, France

From 2010 Honorary Co-Chair of the Build the Peace Committee, USA

From 2010-2013 Patron, Minding Animals International, Australia

From 2010 Member of the International Conference, WE, USA

From 2010 Member of Advisory Board, Living with Wolves, USA

From 2010 Goodwill Ambassador, Equine Sciences Academy, USA

From 2010 Acclaimed Ambassador, Best Friends Animal Society, USA

From 2011 Member of the Advisory Council, Voices for a World Free of Nuclear Weapons, USA

From 2011 Patron, Voiceless, Australia

From 2012 Honorary Councilor, World Future Council, Germany

From 2012 Honorary Board, Center for Great Apes, USA

From 2013 International Patron, School Broadcasting Network Inc., Australia

From 2013 Member of Scientific and Ethics Council, Ecolo-Ethik, France

From 2013 Philosophical Society, Trinity College, Dublin, Ireland

From 2014 Member of Advisory Council, International Women's Earth and Climate Initiative (IWECI), USA

From 2014 Member of Advisory Board, Years of Living Dangerously, USA

From 2014 Advisor to Board, APOPO, USA

From 2014 Advisory Board, Mongabay.org, USA

From 2014 Honorary Board of Directors, IFAW, USA

From 2015 Patron of Nature, IUCN, USA

Memberships

1972 Honorary Foreign Member of the American Academy of Arts and Sciences, USA

1981 Explorer's Club, USA

1984 Foreign Member of the Research Centre for Human Ethology at the Max-Planck Institute for Behavioral Physiology, Germany

1988 American Philosophical Society, USA

1988 Society of Woman Geographers, USA

1990 Deutsche Akademie der Naturforscher Leopoldina, Germany

1991 Academia Scientiarum et Artium Europaea, Austria

1991 Honorary Fellow of the Royal Anthropological Institute of Great Britain and Ireland

2004 Great Ape Subsection of the Primate Specialist Group, USA

2006 Honorary Member, Ewha Academy of Arts and Sciences, Republic of Korea

2006 Member of the International Primatological Society, USA

Honorary Degrees

1975 LaSalle College, Philadelphia, Penn., USA

1979 Stirling University, Stirling, Scotland, UK

1986 Ludwig-Maximilians University, Munich, Germany

1986 Zoologisches Institut der Universität München, München, Germany

1986 Tufts University, Boston, Mass., USA

1988 University of North Carolina, Greensboro, N.C., USA

1990 University of Pennsylvania, Philadelphia, Penn., USA
1991 Colorado College, Colorado Springs, Colo., USA
1993 College of William and Mary, Williamsburg, Va., USA
1993 University of Miami, Coral Gables, Fla., USA
1994 Utrecht University, Utrecht, Netherlands
1996 Western Connecticut State University, Danbury, Conn., USA
1996 Salisbury State University, Salisbury, Md., USA
1997 University of Edinburgh Veterinary School, Edinburgh, Scotland, UK
1998 University of Guelph, Guelph, Ontario, Canada
1999 Albright College, Reading, Penn., USA
2000 Wesleyan College, Macon, Ga., USA
2001 University of Minnesota, Minneapolis, Minn., USA
2001 University at Buffalo, Buffalo, N.Y., USA
2001 Ryerson University, Toronto, Ontario, Canada
2001 Providence University, Taiwan, Republic of China
2002 Elon University, Elon, N.C., USA
2002 Sweet Briar College, Sweet Briar, Va., USA
2003 University of Central Lancashire, UK
2004 University of Natal, Pietermaritzburg, South Africa
2004 Haverford College, Haverford, Penn., USA
2005 Pecs University, Pecs, Hungary
2005 Syracuse University, Syracuse, N.Y., USA
2005 Rutgers, The State University of New Jersey, Camden, N.J., USA

Awards

1963 and 1964 Franklin Burr Award for Contribution to Science, National Geographic Society, USA

- 1970 Stott Science Award, Cambridge University, UK
- 1974 Gold Medal for Conservation. San Diego Zoological Society, USA
- 1974 Conservation Award, Women's Branch of the New York Zoological Society, USA
- 1974 Bradford Washburn Award, Boston Museum of Science (with Hugo van Lawick), USA
- 1980 Order of the Golden Ark, World Wildlife Award for Conservation, presented by HRH Prince Bernhard of the Netherlands, Netherlands
- 1984 J. Paul Getty Wildlife Conservation Prize, Tanzania
- 1985 Living Legacy Award, the Women's International Center, USA
- 1987 The Albert Schweitzer Award of the Animal Welfare Institute, USA
- 1987 National Alliance for Animals Award
- 1987 E. Mendel Medaille from the Deutsche Akademie der Naturforscher Leopoldina, East Germany
- 1987 Golden Plate Award, Academy of Achievement, USA
- 1988 Centennial Award, National Geographic Society, USA
- 1988 Joseph Wood Krutch Medal, the Humane Society of the United States, USA
- 1988 Award for Humane Excellence, American Society for the Prevention of Cruelty to Animals, USA
- 1989 Encyclopedia Britannica Award for Excellence on the Dissemination of Learning for the Benefit of Mankind, USA
- 1989 Anthropologist of the Year Award
- 1990 The Anthropology in Media Award, American Anthropological Association, USA
- 1990 Whooping Crane Conservation Award, Conoco, Inc., USA
- 1990 Gold Medal of the Society of Women Geographers, USA
- 1990 Washoe Award
- 1990 The Kyoto Prize in Basic Science, Japan

- 1991 The Edinburgh Medal, UK
- 1993 Rainforest Alliance Lifetime Achievement Award, USA
- 1994 Chester Zoo Diamond Jubilee Medal, UK
- 1995 Commander of the British Empire, presented by Her Majesty Queen Elizabeth II, UK
- 1995 The National Geographic Society Hubbard Medal for Distinction in Exploration, Discovery, and Research, USA
- 1995 Lifetime Achievement Award, In Defense of Animals, USA
- 1995 The Moody Gardens Environmental Award, USA
- 1995 Honorary Wardenship of Uganda National Parks, Uganda
- 1996 The Zoological Society of London Silver Medal, UK
- 1996 The Tanzanian Kilimanjaro Medal, Tanzania
- 1996 The Primate Society of Great Britain Conservation Award, UK
- 1996 The Caring Institute Award, USA
- 1996 The Polar Bear Award, National Alliance for Animals
- 1996 William Proctor Prize for Scientific Achievement, Sigma Xi, USA
- 1997 Tyler Prize for Environmental Achievement, USA
- 1997 David S. Ingalls, Jr. Award for Excellence
- 1997 Commonwealth Award for Public Service, USA
- 1997 The Field Museum's Award of Merit
- 1997 Royal Geographical Society / Discovery Channel Europe Award for A Lifetime of Discovery
- 1997 Global 500 Roll of Honour Award, UNEP, Seoul, Korea
- 1998 Disney's Animal Kingdom Eco Hero Award, USA
- 1998 National Science Board Public Service Award, USA

- 1998 The Orion Society's John Hay Award, USA
- 1999 International Peace Award, Community of Christ, USA
- 1999 Botanical Research Institute of Texas International Award of Excellence in Conservation, USA
- 2000 Reorganized Church of the Latter Day Saints International Peace Award, USA
- 2001 Graham J. Norton Award for Achievement in Increasing Community Liability
- 2001 Rungius Award of the National Museum of Wildlife Art, USA
- 2001 Master Peace Award
- 2001 Gandhi/King Award for Non-Violence, USA
- 2002 The Huxley Memorial Medal, Royal Anthropological Institute of Great Britain and Ireland
- 2002 United Nations Messenger of Peace Appointment, USA
- 2003 Benjamin Franklin Medal in Life Science, USA
- 2003 Harvard Medical School's Center for Health and the Global Environmental Citizen Award, USA
- 2003 Prince of Asturias Award for Technical and Scientific Achievement, Spain
- 2003 Chicago Academy of Sciences' Honorary Environmental Leader Award, USA
- 2003 Commonwealth Club Centennial Medallion Award
- 2004 Dame of the British Empire, presented by HRH Prince Charles, UK
- 2004 Teachers College Columbia University Medal for Distinguished Service to Education, USA
- 2004 Nierenberg Prize for Science in the Public Interest, USA
- 2004 Will Rogers Spirit Award, the Rotary Club of Will Rogers and Will Rogers Memorial Museums
- 2004 Lifetime Achievement Award, the International Fund for Animal Welfare (IFAW), USA

- 2004 Polar Star Award, Paris, France
- 2004 Save Our Species Award, Santa Barbara, Calif., USA
- 2004 Time Magazine European Heroes Award
- 2004 Extraordinary Service to Humanity Award, The Bear Search and Rescue Foundation, USA
- 2004 Medal for Distinguished Service to Education, Teachers College, Columbia University, N.Y., USA
- 2005 Lifetime Achievement Award, Jackson Hole Wildlife Film Festival, USA
- 2005 Siemens Academy of Life Award, Austria
- 2005 Westminster College President's Medal, Salt Lake City, Utah, USA
- 2005 National Organization for Women's Intrepid Award, USA
- 2005 Honorary Conservation Award, University of Iowa, USA
- 2005 Discovery and Imagination Stage Award, USA
- 2005 Westminster College President's Medal for Exemplary Achievement, Utah, USA
- 2005 Pax Natura Award, Utah, USA
- 2005 Two Wings Award, Vienna, Austria
- 2006 International Patron of the Immortal Chaplains Foundation, USA
- 2006 UNESCO 60th Anniversary Golden Medal Award, Paris, France
- 2006 French Legion of Honor, awarded by the President of France, Mr. Jacques Chirac, and presented by Prime Minister Dominique de Villepin
- 2006 Lifetime Achievement Award, Jules Verne Adventures
- 2006 Biophilia Award, Jazzpur Society, Windsor, Canada
- 2006 Genesis Award, Humane Society of the United States, USA
- 2007 Lifetime Achievement Award, WINGS WorldQuest

2007 Honorary Medal of the City of Paris, presented by Mr. Bertrand Delanoë, mayor of Paris, France

2007 Roger Tory Peterson Memorial Medal, Harvard Museum of Natural History, USA

2008 Presidential Medal for Global and Visionary Leadership, Montana State University, Bozeman, Mont., USA

2008 Prix de la Fondation Prince Albert II de Monaco, presented to David Lefranc by Prince Albert II of Monaco

2008 Prize for Sustainable Community Development, Weidemann Foundation, Calif., USA

2008 State of Rhode Island and Providence Plantations Citation, R.I., USA

2008 Eurogroup Award, Brussels, Belgium

2008 Courage of Conscience Award, The Peace Abbey, Sherborn, Mass., USA

2008 Environmental Education Award of Hebei University of Science and Technology, China

2008 L.S.B Leakey Foundation Prize for Multidisciplinary Research on Ape and Human Evolution (Leakey Prize), USA

2009 United States Department of the Interior, The Secretary's Lifetime Achievement Award, presented by Mr. Ken Salazar, USA

2009 Minerva Award, USA

2010 Association of American Geographers Atlas Award, USA

2010 International Golden Doves for Peace Award, Italy

2010 Peace Hero, Kids for Peace, USA

2010 BAMBI Award, Germany

2010 NEA Award for Outstanding Service to Public Education, NEA Foundation, Washington, D.C., USA

2011 Order of Merit of the Italian Republic, Italy

2011 Mayor's Medallion, Lincoln, Neb., USA

- 2011 Heart of Green Award for Lifetime Achievement, TheDailyGreen.com, USA
- 2011 Focus magazine's Greatest Personality of Planete Doc Film Festival, Poland
- 2011 Honorary International Ranger Award,,The Thin Green Line Foundation and International Ranger Federation, Australia
- 2011 Inspirational International Award, The Inspiration Awards for Women, USA
- 2011 Grand Officer of the Order of Merit of the Italian Republic, presented by the President of the Republic's Counselor Magistrate Dr. Elio Berarducci
- 2012 Lifetime Achievement Award, The Observer Ethical Awards, UK
- 2012 Outstanding Harmony Award in Rio+20, World Harmony Foundation, Australia
- 2012 Anne Marrow Lindberg Award for Living with Grace and Distinction, Huffington Center for Aging, USA
- 2012 II Monito del Giardino international award, Italy
- 2012 AARP Inspire Award, USA
- 2013 Varner Vitality Lecture, Oakland University, Michigan, USA
- 2013 WildCare Environmental Award, California, USA
- 2013, Wyland Icon Award, USA
- 2014 Better Malaysia Foundation (BMF) Person of the Year Award, Kuala Lumpur, Malaysia
- 2014 Animal Defence and Anti-Vivisection Society, Person of the Year Award, British Columbia, Canada
- 2014 Distinguished Lecturer, the University of Iowa Lecture Committee, Iowa, USA
- 2014 Invercargill Vegan Society Award, Dunedin, New Zealand
- 2014 BAUM Award, Germany
- 2014 Look! World Achievement Award
- 2014 Green Prize Award, Santa Monica Public Library
- 2014, Recognition of lifelong contributions to wildlife protection from MOTC, Taiwan

2014, World Technology Network (WTN) Award for Use of Technology in Policy, New York, USA

2014, President's Medal from the British Academy, London, UK

2014, Captain Planet Foundation Exemplar Award, Atlanta, GA USA

2015, Asia Pacific Brand Foundation, The BrandLaureate Legendary Award, Malaysia

2015, Premi Internacional Catalunya Prize, Catalonia, Spain

2015, The Perfect World Foundation, Conservationist of the Year 2015, Stockholm, Sweden

2015, the Orang Utan Republik Foundation, Pongo Environmental Award, Beverly Hills, CA USA

Publications

Books

1967 My Friends the Wild Chimpanzees. Washington, D.C.: National Geographic Society

1971 Innocent Killers (with H. van Lawick). Boston: Houghton Mifflin; London: Collins.

1971 In the Shadow of Man. Boston: Houghton Mifflin; London: Collins.
Published in 48 languages.

1986 The Chimpanzees of Gombe: Patterns of Behavior. Boston: Bellknap Press of the Harvard University Press. Published also in Japanese and Russian.

R.R. Hawkins Award for the Outstanding Technical, Scientific or Medical book of 1986, to Bellknap Press of Harvard University Press, Boston.

The Wildlife Society (USA) Award for "Outstanding Publication in Wildlife Ecology and Management."

1990 Through a Window: My Thirty Years with the Chimpanzees of Gombe. London: Weidenfeld & Nicolson; Boston: Houghton Mifflin.
Translated into more than 15 languages.

1991 Penguin edition, UK. American Library Association "Best" list among Nine Notable Books (Nonfiction) for 1991.

1993 *Visions of Caliban* (co-authored with Dale Peterson, Ph.D.). Boston: Houghton Mifflin.

New York Times "Notable Book" for 1993.

Library Journal "Best Sci-Tech Book" for 1993.

1999 *Brutal Kinship* (with Michael Nichols). New York: Aperture Foundation.

1999 *Reason For Hope: A Spiritual Journey* (with Phillip Berman). New York: Warner Books, Inc. Translated into more than 13 languages.

1999 *40 Years At Gombe*. New York: Stewart, Tabori, and Chang.

2000 *Africa In My Blood* (edited by Dale Peterson). New York: Houghton Mifflin Company.

2001 *Beyond Innocence: An Autobiography in Letters, The Later Years* (edited by Dale Peterson). New York: Houghton Mifflin Company.

2002 *The Ten Trusts: What We Must Do To Care for the Animals We Love* (with Marc Bekoff). San Francisco: Harper San Francisco.

2005 *Harvest for Hope: A Guide to Mindful Eating* (with Gary McAvoy and Gail Hudson). New York: Warner Books.

2009 *Hope for Animals and Their World: How Endangered Species Are Being Rescued from the Brink* (with Thane Maynard and Gail Hudson). New York: Grand Central Publishing.

2010 *50 Years at Gombe*. New York: Stewart, Tabori, and Chang.

2014 *Seeds of Hope: Wisdom and Wonder from the World of Plants* (with Gail Hudson). New York: Grand Central Publishing.

Children's Books

1972 *Grub: The Bush Baby* (with H. van Lawick). Boston: Houghton Mifflin.

1988 *My Life with the Chimpanzees*. New York: Byron Preiss Visual Publications, Inc. Translated into French, Japanese and Chinese.

Parenting's Reading-Magic Award for "Outstanding Book for Children," 1989.

1989 *The Chimpanzee Family Book*. Saxonville, MA: Picture Book Studio; Munich: Neugebauer Press; London: Picture Book Studio.

Translated into more than 15 languages, including Japanese and Kiswahili.

The UNICEF Award for the best children's book of 1989.

Austrian state prize for best children's book of 1990.

1989 Jane Goodall's Animal World: Chimps. New York: Macmillan.

1989 Animal Family Series: Chimpanzee Family; Lion Family; Elephant Family; Zebra Family; Giraffe Family; Baboon Family; Hyena Family; Wildebeest Family. Toronto: Madison Marketing Ltd.

1994 With Love (illustrated by Alan Marks). New York / London: North-South Books. Translated into German, French, Italian, and Japanese.

1999 Dr. White (illustrated by Julie Litty). New York: North-South Books.

2000 The Eagle & the Wren (illustrated by Alexander Reichstein). New York: North-South Books.

2001 Chimpanzees I Love: Saving Their World and Ours. New York: Scholastic Press.

2004 Rickie and Henri: A True Story (with Alan Marks) New York: Penguin Young Readers Group.

2013 Dr. White (illustrated by Julie Litty) gift book size. Hong Kong: minedition

2014 The Eagle & the Wren (illustrated by Alexander Reichstein) gift book size. Hong Kong: minedition

2014 With Love (illustrated by Alan Marks) gift book size. Hong Kong: minedition

2014 Jane Goodall The Chimpanzee Children of Gombe (with Michael Neugebauer). Hong Kong: minedition

2015 Prayer for World Peace (with Michael Neugebauer). Hong Kong: minedition

Films

1963 Miss Goodall and the Wild Chimpanzees, National Geographic Society.

1984 Among the Wild Chimpanzees, National Geographic Special.

1988 People of the Forest, with Hugo van Lawick.

1990 Chimpanzee Alert, in the Nature Watch Series, Central Television.

1990 Chimps, So Like Us, HBO film nominated for 1990 Academy Award.

1990 The Life and Legend of Jane Goodall, National Geographic Society.

1990 The Gombe Chimpanzees, Bavarian Television.

- 1995 Fifi's Boys, for the Natural World series for the BBC.
- 1995 My Life with the Wild Chimpanzees, National Geographic.
- Chimpanzee Diary for BBC2 Animal Zone.
- Animal Minds for BBC.
- 1999 Jane Goodall: Reason For Hope, PBS special produced by KTCA.
- 2001 Chimps R Us PBS special Scientific Frontiers.
- 2002 Jane Goodall's Wild Chimpanzees, in collaboration with Science North and Science Museum of Minnesota.
- 2004 Jane Goodall's Return to Gombe, produced by Tigress Productions for Animal Planet/Discovery Communications.
- 2004 Jane Goodall's State of the Great Ape, produced by Tigress Productions for Animal Planet/Discovery Communications.
- 2005 Jane Goodall - When Animals Talk, produced by Tigress Productions for Animal Planet/Discovery Communications.
- 2006 Jane Goodall's Heroes, produced by Creative Differences for Animal Planet/Discovery Communications.
- 2007 Almost Human, produced by Creative Differences for Animal Planet/ Discovery Communications
- 2010 Jane's Journey, produced by Animal Planet, CC Medien, NEOS Film and Sphinx Media
- 2014 Jane and Payne, produced by Boy Olmi and LSD Live (Dylan Williams),

1992 Psychosocial needs of laboratory chimpanzees. *Proceedings of the Symposium on Biomedical Research on Primates*.

1993 Unusual violence surrounding the rise to alpha rank in the Gombe chimpanzee community. In: *Proc. XIIIth Cong. IPS*.

1993 (with J. Wallis). Anogenital swelling in pregnant chimpanzees of Gombe National Park. *Am. J. Primatol.* 31(2): 89-98.

1994 (with P.A. Morin, J.J. Moore, R. Chakraborty, L. Jin, and D.S. Woodruff). Kin selection, social structure, gene flow and the evolution of chimpanzees. *Science* 265: 1193-1201.

1994 (with C.B. Stanford, Wallis, J., Matama, H.) Patterns of Predation by chimpanzees on red colobus monkeys in Gombe National Park, 1982-1991. *American Journal of Physical Anthropology*, 94 (2) 213-228.

1994 (with C.B. Stanford, Wallis, J, Mpongo, E) Hunting decisions in wild chimpanzees. *Behaviour*, 131, 1-18.

1995 (with C. Packer, D.A. Collins, and A. Sindimwo). Reproductive constraints on aggressive competition in female baboons. *Nature* 373: 60-63.

1995 Why is it unethical to use chimpanzees in the laboratory? *ATLA*. 23: 615-620.

1995 Chimpanzees and others at play. *ReVision* 17 (4): 14-20.

1997 (with A. Pusey and J. Williams). The influence of dominance rank on the reproductive success of female chimpanzees. *Science*. 277: 828-831.

1999 (with A. Whiten, McGew, W.C., Nishida, T., Reynolds, V., Sugiyama, Y. Tutin, C.E.G., Wrangham, R.W., Boesch, C.) Cultures in chimpanzees. *Nature* 399, 682-5.

2001 (with Marc Bekoff). *Primate Origins of Human Cognition and Behavior*, edited by Tetsuro Matsuzawa. (Book review). *Science*. 411: 995-996.

2001 (with Bekoff, M.). The view from Japan. *Nature* 411, 995-996.

2001 (with Mario L. Santiago, Cynthia M. Rodenburg, Shadrack Kamenya et. al.) Noninvasive Detection and Molecular Identification at Simian Immunodeficiency Virus in Wild-living Chimpanzees. *Nature*.

2001 (with A. Whiten, McGew, W.C., Nishida, T., Reynolds, V., Sugiyama, Y. Tutin, C.E.G., Wrangham, R.W., Boesch, C.) Charting cultural variation in chimpanzees. *Behavior* 138, 1489-1525.

2001 (with Constable, J., Ashley, M., & Pusey, A.) Noninvasive paternity assignment in Gombe chimpanzees. *Molecular Ecology*, 10:1279-1300.

2001 (with Hill, K., Goodall, J, Pusey, A., Williams, J., Boesch, C., Boesch, H., & Wrangham, R.W.) Chimpanzee mortality in the wild. *Journal of Human Evolution*. 40:437-450.

2002 (with RW Wrangham and D Pilbeam). Apes as time machines. In BMF Galdikas, N Briggs, LK Sheeran, GL Shapiro, and J Goodall eds, *All Apes Great and Small Volume 1: Chimpanzees, Bonobos, and Gorillas*. Plenum/Kluwer Publication

2002 (with Anne Pusey, Shadrack Kamenya, Anthony Collins, Richard Wrangham, Beatrice H. Hahn et. al.) SIV cpz in Wild Chimpanzees. *Science*.

2002 (with Lonsdorf, E. V.) Cultures in chimpanzees. *Encyclopedia of Evolution*. Oxford UK, Oxford University Press.

2002 (with Santiago, M.L., Rodenburg, C.M., Kamenya, S., Bibollet-Ruche, F., Gao, F., Bailes, E., Meth, S., Soong, S.-J., Kilby, J.M., Moldoveanu, Z., Fabey, B., Muller, M.N., Ayouba, A., Nerrienet, E., McClure, H.M., Heeny, J.L., Pusey, A.E., Collins, D.A., Boesch, C., Wrangham, R.W., Goodall, J., Sharp, P.M., Shaw, G.M. & Hahn, B.H.) SIVcpz in wild chimpanzees. *Science* 295:465.

2002 (with Williams, J.M., Pusey, A.E., Carlis, J.V., & Farm, B.) Female competition and male territorial behaviour influence female chimpanzees' ranging patterns. *Animal Behaviour*. 63:347-360.

2003 (with Santiago, M.L., Bibollet-Ruche, F., Bailes, E., Kamenya, S., Muller, M.N., Lukasik, M., Pusey, A.E., Collins, D.A., Wrangham, R.W., Shaw, G.M., Sharp, P.M. & Hahn, B.) Amplification of a complete simian immunodeficiency virus genome from fecal RNA of a wild chimpanzee. *Journal of Virology*, 77:2233-2242.

2003 (with Santiago, M.L., Lukasik, M., Kamenya, S., Yingying, L., Bibollet-Ruche, F., Bailes, E., Muller, M.N., Emery, M., Goldenberg, D.A., Lwanga, J., Ayouba, A., Nerrienet, E., McClure, H.M., Heeney, J.L., Watts, D.P., Pusey, A.E., Collins, D.A., Wrangham, R.W., Brookfield, J.F.Y., Sharp, P.M., Shaw, G.M., & Hahn, B.H.) Endemic foci of simian immunodeficiency virus infection in wild-living eastern chimpanzees (*Pan troglodytes schweinfurthii*). *Journal of Virology*. 77: 7545-7562.

2003 Fifi fights back. *National Geographic* 203 (4): 76-89.

2004 (with Lodwick, J.L., Borries, C., Pusey, A.E., & McGrew, W.C.). From nest to nest -influence of ecology and reproduction on the active period of adult Gombe chimpanzees. *American Journal of Primatology* 64:249-260.

2005 (with Pusey, A.E., Oehlert, G.W., & Williams, J.M.). The influence of ecological and social factors on body mass of wild chimpanzees. *International Journal of Primatology*, 26: 3-31.

2006 (with Lonsdorf, E.V., Travis, D., & Pusey, A. E.). Using retrospective health data from the Gombe chimpanzee study to inform future monitoring efforts. *American Journal of Primatology*, 68: 897-908.

2007 (with M Emery Thompson, JH Jones, AE Pusey, S Brewer-Marsden, D Marsden, T Matsuzawa, T Nishida, V Reynolds, Y Sugiyama, RW Wrangham). Aging and fertility patterns in wild chimpanzees provide insights into the evolution of menopause.. *Current biology*: CB 17: 2150-6

2007 (with Pusey, A.E., Pintea, L, Wilson, M.W. & Kamenya, S.). The contribution of long-term research at Gombe National Park to chimpanzee conservation. *Conservation Biology* 21: 623-634.

2008 (with Ross, S.R., Lukas, K.E., Lonsdorf, K.V., Stoinski, T.S., Hare, B., Shumaker, R). Inappropriate Use and Portrayal of Chimpanzees. *Science* 319: 1487.

2008 (with Williams, J.M., Lonsdorf, E.V., Wilson, M.L., Schumacher-Stankey, J., Pusey, A. E.). Causes of death in the Kasekela chimpanzees of Gombe National Park, Tanzania. *American Journal of Primatology*. 70: 745-750.

2008 (with AE Pusey, CM Murray, W Wallauer, ML Wilson, & E Wroblewski). Severe Aggression among Female *Pan troglodytes schweinfurthii* at Gombe National Park, Tanzania. *International Journal of Primatology* 29: 949-973

2009 (with Keele, B.F, Jones, J.H. , Terio, K.A., Estes, J.D., Rudicell, R.S., Wilson, M.L., Li, Y., Learn, G.H., Beasley, T.M., Schumacher-Stankey, J., Wroblewski, E., Mosser, A., Raphael, J., Kamenya, S., Lonsdorf, E.V., Travis, D.A., Mlengeya, T., Kinsel, M.J., Else, J.G., Silvestri, G., Sharp, P.M., Shaw, G.M., Pusey, A.E., Hahn, B.H.). Increased Mortality and AIDS-like Immunopathology in Wild Chimpanzees Infected with STVcpz. *Nature* 460: 515-519.

2010 (with Rudicell, R. S., Jones, J.H., Wroblewski, E.E, Learn, G. H., Li, Y., Robertson, J., Greengrass, E., Grossmann, F., Kamenya, S., Pintea, L., Mjungu, D.C., Lonsdorf, E.V., Mosser, A., Lehman, C., Collins, D.A., Keele, B.F., Pusey, A.E., Hahn, B., Wilson, M.L.). AFFIDAVIT OF MARY
LEE JENSVOLD, Ph.D**

Index No.

STATE OF _____)
) ss:
COUNTY OF _____)

Mary Lee Jenvold being duly sworn, deposes and says:

Introduction and Qualifications

1. My name is Mary Lee Jenvold. I reside and work in Ellensburg, Washington. I hold a Ph.D. in Experimental Psychology from the University of Nevada, Reno, which I received in 1996.
2. I submit this Affidavit in support of Petitioner, The Nonhuman Rights Project, Inc.'s ("NhRP"), petition for a writ of habeas corpus brought on behalf of Kiko. I am a non-party to this proceeding.

3. I am currently Associate Professor in the Department of Anthropology and Museum Studies and former Director of the Chimpanzee and Human Communication Institute at Central Washington University. I am also faculty in Primate Behavior and Ecology Program, at Central Washington University. I have taught the following courses at Central Washington University: Primate Social Behavior, Chimpanzee Culture and Communication, Introduction to Primate Laboratory Experience, Laboratory Work in Primatology, Primate Culture and Cognition, Introduction to Psychology, Psychology of Thought and Language, and Nonverbal Behavior, among others.

4. I have been a member of the Board of Directors of the Animal Welfare Institute since 2007 and Friends of Washoe (a nonprofit organization dedicated to the welfare of chimpanzees) since 1999, and have been on the Advisory Board of the Fauna Foundation (a chimpanzee sanctuary in Quebec, Canada) since 1999. From 1997 – 2000, I served on the Scientific Advisory Board for the National Chimpanzee Sanctuary. I have held positions as a chimpanzee behaviour consultant at Fauna Foundation, a Principal Investigator for “Caring for Chimpanzees” Earthwatch Program at Central Washington University, and have been a research assistant for sign language studies of chimpanzees at the University of Nevada, Reno. I was recently awarded the Sigma Xi Distinguished Lecturer Award for 2013 – 2015.

5. My research specialization is in gestural communication and use of American Sign Language in chimpanzees. Additionally, I research play behaviour, imagination, culture and intelligence, as well as husbandry, welfare and environmental enrichment in captive chimpanzees. I have over twenty-seven years of experience working with and studying chimpanzees and daily firsthand experience interacting with them. As such, I possess both a theoretical and applied understanding of chimpanzee behaviour.

6. I have published 29 peer-reviewed articles, book chapters and encyclopedia entries on gestural communication, use of American Sign Language, the evolution of social communication, as well as environmental enrichment, effects of enclosures and social interactions, in chimpanzees. My papers have appeared in some of the most prestigious journals in the area of animal behaviour, including *Animal Cognition*, *American Journal of Primatology*, *Journal of Applied Animal Welfare Science*, *Human Evolution*, and *Journal of Sociolinguistics*.

7. I have given 91 presentations at professional conferences throughout the United States and have also given 13 invited addresses at professional research conferences and at various universities throughout the United States. These presentations have covered the following relevant topics: gestures and signing, cultural transmission, laughter and play, vocabulary development (American Sign Language), conversational use of sign language, evaluation of enriched captive environments and neuroscientific models of continuity across ape and human communication systems.

8. My Curriculum Vitae sets forth my educational background and experience and is annexed to my original Affidavit, filed herewith.

Basis for Opinions

9. The opinions I state in this Affidavit are based on my professional knowledge, education, training, and 27 years of research with chimpanzees, as well as my review of peer-reviewed literature about primatology published in the world's most respected journals, periodicals and books that are generally accepted as authoritative in the field of primatology, many of which were written by myself and colleagues with whom I have worked for many years and whose research and field work I am personally familiar with. A full reference list of peer-reviewed literature cited herein is annexed hereto.

Opinions

10. Chimpanzees can bear duties and responsibilities. One way this is demonstrated is by their social dynamics. Their communities are embedded in male hierarchy. Usually there is a single dominant male but often he only holds that position by the support of other males. In these cases these dominant males demonstrate a sense of duty to their supporters. For example, the dominant male will provide grooming, access to females, and perhaps access to meat to his primary supporter. This is well described by Nishida (1983). Chimpanzees are also highly protective of their communities, and will go to great lengths to defend them. This involves their shouldering responsibility.

11. I worked with five chimpanzees over nearly three decades studying how they use American Sign Language to communicate with humans and each other (Gardner, Gardner, & Van Cantfort, 1989; Fouts & Mills, 1997; Jensvold, Wilding, & Schulze, 2014; Jensvold, 2014; Leeds & Jensvold, 2013; Leitten, Jensvold, Fouts, & Wallin, 2012; Jensvold & Gardner, 2000). For decades, the daily routine at the Central Washington University laboratory in Ellensburg, Washington, involved the chimpanzees participating in numerous activities with caregivers. These included husbandry duties.

12. In the mornings, the chimpanzees helped clean enclosures by returning their blankets from the night before. The chimpanzees all participated; it was the duty that we placed upon them. When new caregivers appeared, the chimpanzees sometimes made an attempt at ditching their duties, but eventually they bore the responsibility of returning blankets and other objects in the enclosure to the caregiver. This was done without bribery.

13. At lunchtime, all of the chimpanzees were served a course of soup followed by a course of fresh vegetables that was offered only if all of the chimpanzees ate their soup. If one of

the chimpanzees refused to eat their soup, the others put pressure on the noneater by offering her the soup and a spoon. The noneater nearly always capitulated and ate the soup. This individual behavior that affected the group demonstrated their sense of responsibility and duty.

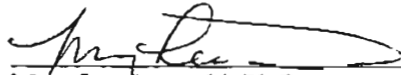

14. Maternal behavior is another clear indicator of responsibility. The signing chimpanzee Washoe adopted a 10-month-old chimpanzee named Loulis. While they bore no genetic relationship, Washoe was a very protective adopted mother. When I first met Loulis he was eight-years-old. Even at his late childhood age, Washoe was still very protective of him. Graduate assistants such as myself lived in fear of Loulis' screams, whether warranted or not, as they would bring Washoe down upon us in an instant. Washoe would then immediately display aggressive behaviors to the caregiver in defense of her son.

15. Chimpanzees have duties to each other. Their relationships to each other are even more supportive of each other than to a caregiver, no matter their level of fondness for the human. If a chimpanzee gives an aggressive display of behavior or indicator of being hurt or offended, the other chimpanzees always come to that chimpanzee's support by making aggressive barks at the human. Again this is regardless of the individual relationship with the human. Their first duty is to the other chimpanzees.

16. Moral behavior can be demonstrated in the chimpanzees' use of the sign SORRY, which they acquired while reared as deaf human children. If they did something aggressive to a human, the chimpanzees often responded with SORRY. These apologies go with morals and a sense of right and wrong. When the Central Washington University facility closed, the two remaining sign-language-using chimpanzees in the group, Tatu and Loulis, moved to a sanctuary with 11 other chimpanzees, none of whom knew sign language. Tatu sometimes antagonized her new neighbors by poking sticks at them through the fencing. That often elicited aggressive

behavioral displays, to which Tatu would sometimes respond by signing SORRY to the offended chimpanzee.

17. Based upon my research and expertise in this field, I support the NhRP's petition for a writ of habeas corpus on behalf of Kiko and the application of common law personhood to chimpanzees.

UNITED KINGDOM)
)
COUNTRY OF ENGLAND) ss:
CITY OF Cambridge)

William C. McGrew being duly sworn, deposes and says:

Introduction and Qualifications

1. My name is William C. McGrew. I reside and work in Cambridge, England. I was awarded a D.Phil. in Psychology from the University of Oxford in 1970, a Ph.D. from in Social Anthropology from the University of Stirling (Scotland) in 1990, and a Ph.D in Biological Anthropology from the University of Cambridge in 2009.

2. I submit this affidavit in support of Petitioner, The Nonhuman Rights Project, Inc. ("NhRP"), on behalf of Kiko, for a writ of habeas corpus. I am a non-party to this proceeding.

3. I am currently Emeritus Professor of Evolutionary Primatology in the Division of Biological Anthropology, Department of Archaeology and Anthropology, University of Cambridge. Since 1972 I have taught the following courses (in reverse chronological order): Cultural Primatology, Apes as Models for Human Evolution, Primate Socio-Ecology at the University of Cambridge; Behavioral Ecology and Conservation Biology, Human Evolutionary Ecology, Mammalogy, Origins of Human Material Culture, and Socio-Ecology of Primates at Miami University (Ohio), Socio-Ecology of Primates at Earlham College (Indiana), Animal Behaviour, Behavioral Primatology, and Developmental Psychology at University of Stirling.

4. I was elected a Fellow of the Royal Society of Edinburgh in 2003 and the American Association for the Advancement of Science in 2005. I am a recipient of the Howells Prize (American Anthropological Association), Prix Delwart (Royal Academy of Sciences, Belgium), and Osman Hill Medal (Primate Society of Great Britain). I have held visiting appointments at the University of California-Berkeley, University of New Mexico, University of North Carolina-Charlotte, Tulane University, as well as the Collegium Budapest (Hungary), College de France (Paris), and Hanse-Wissenschaftskolleg (Delmenhorst, Germany).

5. I have served on the IUCN-SSC Primate Specialist Group, Africa and Great Apes since 2004 and on the Scientific Board, International Primate Protection League since 1977. I served on the Board of Directors of Chimp Haven, Inc. from 1999-2005 and the Council and Executive Committee of the Royal Zoological Society of Scotland in 1975. I have served on the editorial boards of the following scientific journals: *American Journal of Primatology* (1991 -

1999), *Folia Primatologica* (1989 -2009), the *International Journal of Primatology* (1995 - 2000) and *Primates* (1985 - present).

6. My specialization is in the great apes, and especially the study of the behaviour and ecology of chimpanzees. I have done field research on chimpanzees and bonobos from 1972-2012, in six African countries. These studies have spanned the species' range from West Africa (Senegal and Guinea) to Central Africa (Gabon and Congo-Kinshasa) to East Africa (Tanzania and Uganda). I have collected data on wild chimpanzees at more research sites than any other scientist. I have done behavioural research on captive chimpanzees in laboratories, sanctuaries, wildlife parks, and zoological gardens.

7. I have written or co-edited 10 books, seven of which are relevant here, including: *Chimpanzee Material Culture* (1992, Cambridge University Press); *Topics in Primatology. Vol.1. Human Origins* (1992, University of Tokyo Press); *Chimpanzee Cultures* (1994, Harvard University Press); *Great Ape Societies* (1996, Cambridge University Press); *The Cultured Chimpanzee* (2004, Cambridge University Press), *Chimpanzee Behavior in the Wild* (2010, Springer); *The Evolution of Human Handedness* (2013, Wiley). Some have been translated into such languages as Italian, Japanese, and Slovenian.

8. I have published 162 articles and book chapters on the behaviour, ecology, welfare, or conservation of monkeys and apes, including more than 100 peer-reviewed articles in the world's most-cited scientific journals: *Nature*, *Science*, *Proceedings of the National Academy of Sciences USA*, *Proceedings of the Royal Society*, *Philosophical Transactions of the Royal Society*, *Evolutionary Anthropology*, *American Journal of Physical Anthropology*, *Animal Behaviour*, *Animal Cognition*, *Current Anthropology*, *Current Biology*, *Trends in Cognitive Science*, *Trends in Ecology and Evolution*, as well as more specialised academic periodicals, 44

chapters in edited book volumes, and the rest in the popular press. These publications have covered 15 species of non-human primates, from common marmoset to chimpanzee and gorilla. Specific topics of these publications include: culture, tool-use, diet, sexual behaviour, sex differences, birth, predation, parasites, social organisation, ranging, kinship, parental behaviour, environmental enrichment, rehabilitation, food-sharing, mating systems, handedness, seasonality, genetics, bipedality, activity budgets, skeletal structure, psycho-pathology, vegetation ecology, archaeology, alcohol ingestion, and insectivory.

9. I regularly give invited lectures and take part in international symposia in primatology. Over the last 40 years, such speaking engagements have averaged about 4 per year. This does not count many more research talks given at universities or at regional, national or international conferences. These lectures and symposia have taken place in: Austria, Belgium, Canada, England, France, Germany, Guinea, Indonesia, Italy, Japan, Mexico, Portugal, Romania, Russia, Scotland, Singapore, South Africa, Spain, Switzerland, and USA.

10. My Curriculum Vitae sets forth my educational background and experience and is annexed to my original Affidavit, filed herewith.

Basis for Opinions

11. The opinions I state in this Affidavit are based on my professional knowledge, education, training, and 40 years of research and field work with chimpanzees, as well as my knowledge of peer-reviewed literature about primatology published in the world's most respected journals, periodicals and books that are generally accepted as authoritative in the field of primatology, many of which were written by myself and colleagues with whom I have worked for many years and with whose research and field work I am personally familiar. A full reference list of peer-reviewed literature cited herein is annexed hereto.

Opinions

12. Among its various definitions for ‘duty’, the *Oxford English Dictionary* gives “behaviour due to a superior”, “deference”, “obligation”, and “the binding force of what is morally right”. Similarly, for ‘responsibility’, the *OED* gives “a charge, trust, or duty, for which one is responsible”. It defines ‘responsible’ as “accountable for one’s actions”, “having authority or control”, and “capable of rational conduct... of fulfilling an obligation or trust”.

13. Chimpanzees assume duties and responsibilities. In providing some of the evidence of this, I will concentrate on my speciality, field studies of wild chimpanzees, leaving findings from captive chimpanzees for others to recount.

14. Chimpanzee mothers show a “duty of care” to their offspring that rivals that of humans. As single mothers, they feed, protect, carry, shelter, and train their infants, for an average of 5.5 years, from birth until weaning (Clark 1977). Without this succour, infant chimpanzees die (unless adopted, see below). After weaning, chimpanzee mothers continue to groom, support and cooperate with their offspring for the rest of their lives, even into the adulthood of their offspring and the old age of the mothers (Goodall 1986b).

15. Chimpanzee mothers may continue this care, even after the death of an infant. They may carry and safeguard the infant’s corpse for days, or even weeks, until it has perished to the point of disintegration (Biro et al., 2010). Moreover, young female chimpanzees practice their future maternal behaviour by using sticks as ‘dolls’, while young males do not, in a form of symbolic play. (Kahlenberg and Wrangham 2010).

16. Such familial duties are not restricted just to mothers, however. Maternal siblings of both sexes also supplement the mother with similar care-giving behaviours (except for suckling). This preferential treatment endures throughout their lives, for example, adult brothers

may work together in alliance to strive to rise in the community's dominance hierarchy (Riss and Goodall 1977). The two highest-ranking female kinship lineages (matrilines) at Gombe, the longest-studied population of wild chimpanzees, in western Tanzania, are the F and G families. In these families, patterns of familial duties have extended through three generations, that is, grandmothers also participate in the upbringing of their grandchildren. These families also show the highest reproductive success, in terms of offspring survival.

17. Such duties of care extend beyond shared genes (kinship). A chimpanzee infant orphaned by the death of the mother may be adopted by others to whom it is not related. Moreover, these foster parents need not be female, nor even adult. Adopted orphans are more likely to survive, while unadopted orphans below the age of weaning almost always perish (Boesch et al. 2010). Such bonds may last a lifetime, even between unrelated males in adulthood, as expressed in the 'currency' of chimpanzee social life, grooming (Mitani 2009).

18. Duties and responsibilities beyond the family (or lineage) cross over into the realm of the community (or unit-group), which is the basic social unit of chimpanzees. A simple example is territorial defense. Chimpanzee territories are defended collectively, unlike the individual territories of most animals; they must work together (see below) to defend themselves and their resources against their neighbours. Relations with neighbouring communities are hostile, so that stronger communities may displace weaker ones, resulting in loss of resources or reproductive partners (Mitani et al. 2010). Such extreme competition can enact a fatal toll: A single male caught in the border zone by the neighbours may be killed; a single female with infant similarly caught may have her baby killed and eaten by them (Wilson et al. 2014). Xenophobia exacts a cost on outsiders.

19. To maintain territorial integrity, males cooperate regularly to patrol the boundaries of the community's territory (Wilson et al. 2014). If their territory is invaded, they display together against the intruders, or if necessary, attack them. This is a necessary chore. Numbers count, so any individual shirking responsibility lets down the group, in effect. In a border skirmish, a male deserted by comrades may perish. On the other hand, a united group may prevail and win rewards. Such patrols are conducted cautiously and silently; a male who makes noise may give away his colleagues. Even a snapped twig leads to apparently disapproving glances from the others. (I know this because I have unwittingly been guilty of such a misstep, and been on the receiving end of this silent reproach.) What makes this shared responsibility so impressive is that the same males whose lives depend on one another in the patrol will later compete robustly with one another over (e.g.) access to a receptive female. Somehow, they can resolve the contradictions involved in having conflicting interests in different contexts (Goodall 1986b). This implies mutual recognition of shared responsibilities.

20. Another chimpanzee universal that necessarily entails duties and responsibilities is participation in a hierarchy of social dominance. Male chimpanzees rank-order themselves from alpha (top) to omega (bottom) in linear fashion (Goodall 1986b). The advantages of high rank and the disadvantages of low rank are obvious: More dominant individuals win more resources and mates. So, why do low-rankers take part in the system at all? Why not just withdraw? Two reasons stand out: It is better to be low-ranking in a group than to be unranked in solitude. And, there are costs as well as benefits to being high-ranking, which low-rankers avoid.

21. One of the costs of alpha status is the duty to exercise 'policing' powers in the community (Goodall 1982). The alpha male's role includes a variety of time- and energy-sapping activities, such as intervening in quarrels or fights between other community members, thus

maintaining community integrity and preventing injury. He oversees the distribution of valuable resources, such as meat, after a successful hunt. (This is not to say that such activities are altruistic, and some males may be less responsible than others, or more self-serving, but these activities do help to maintain the common good.) Finally, there are other, less obvious 'chores' associated with high rank: When crossing roads, high-ranking males lead the way, being vigilant for traffic, and bring up the rear, making sure that others are not left behind (Hockings et al. 2006).

22. Perhaps the most impressive example of collective community action is what sometimes occurs after the death of a community member (Anderson 2011). Others may perform what amounts to a funeral ceremony, or at least a wake. They congregate around the corpse, groom and test it for viability, seeming to seek to arouse it. Then, as if accepting that death has occurred, they maintain a silent vigil that may last for hours. This collective action occurs both in nature (Piel and Stewart in press) and in captivity (Anderson et al. 2010). This appears to involve the exercise of duty or responsibility as there is no obvious material pay-off to the individuals who join in.

23. Chimpanzees show behaviour that seems lawful and rule-governed. Goodall (1982) cited multiple examples of behavioural regularity that reflected the maintenance of social order: adult males being protective of infants, dominant individuals breaking up fights (policing), incest avoidance between adult kin, possessiveness of other individuals' objects, etc. (Goodall 1986a). Sometimes this takes the form of specific, targeted ostracism of individuals who violate norms, such as a young adult male who disrespected higher-ranking males, who was fatally punished (Nishida et al. 1995).

24. Another indicator of rule-governed social interaction within a group is systematic, long-term reciprocity of favours or benefits among its members. That is, 'you scratch my back, I scratch yours'. A simple form is literally this, that is, like-for-like social grooming, but a more complex form is the exchange of differing goods or services, for example, if I provision you with prized food, such as meat, then at a later point, you will favour me as a mate (Gomes and Boesch 2009). Or, if you support me in my aggressive attempts to rise in dominance, then I will allow you access to females for mating (Duffy et al. 2007). Such arrangements only work in the long term (i.e. over years) if participants assume and carry out obligations offered and accepted.

Ape and Human

25. I know of few cross-species examples of duty and responsibility in nature, that is, examples of chimpanzees showing this to humans, although many examples can be found in relationships between captive chimpanzees and humans. Perhaps the best example in the wild is the simplest one: Researchers at Gombe National Park in Tanzania have studied wild chimpanzees for more than 55 years. Tens of thousands of observation hours at close quarters have accumulated over these decades. Most of the chimpanzees studied have spent time with researchers from birth onwards, their whole lives, on a daily basis. Chimpanzees have impressive slashing canine teeth, such that a single bite to a human could cause serious injury, even death. *Yet, not a single instance has occurred of a chimpanzee biting a researcher.* However many times researchers have inadvertently interfered with or frightened a Gombe chimpanzee, through ignorance or by accident, no chimpanzee has ever retaliated in the ultimate way. This is very impressive. At the very least, it shows remarkable tolerance by the apes, or more likely they see the long-established relationship with these familiar humans as something they are duty-bound to uphold.

26. When chimpanzees and local humans live at close quarters, especially in unprotected areas, outside of national parks or reserves, both parties must adjust to one another (Hockings et al. 2012). Each impinges on the other, sometimes negatively (crop-raiding by apes; deforestation by humans), sometimes positively (each tolerates disturbance of their preferred daily routines). Humans who tap wild palm trees for sap, which ferments into ‘palm wine’, allow chimpanzees to pilfer this beverage from their containers (Hockings et al. 2015). Sometimes these interactions go beyond the mundane, into matters of life and death. At Fongoli, a wild chimpanzee research site in Senegal, poachers captured a wild chimpanzee infant. Researchers tracked them down in a nearby town and reclaimed the infant. They then returned to the site, and when the context was right, restored the infant to its mother, and the two live on (Pruetz and Kante 2010). Each party respected the duty of care involved in parenthood.

27. Given all of the above, and my experience of forty years observing chimpanzees in the wild, it is my opinion that chimpanzees understand and carry out duties and responsibilities, that they knowingly assume obligations and honour them. Most importantly, such behaviour is essential for the maintenance of chimpanzee society, and it can be extended to human beings when necessary. The evidence presented passes the ‘as if’ test, that is, when we see such behaviour shown by humans, we credit it, and we should do the same with chimpanzees.

28. Based upon my research and expertise in this field, I support the NhRP’s petition for a writ of habeas corpus on behalf of Kiko and the application of common law personhood to chimpanzees.

STATE OF _____)
) ss:
 COUNTY OF _____)

Emily Sue Savage-Rumbaugh, being duly sworn, deposes and says:

Introduction and Qualifications

1. My name is Emily Sue Savage-Rumbaugh. I received a B.A. in Psychology from Southwest Missouri University in 1970, a M.S. in Psychology from University of Oklahoma in 1975, and a Ph.D. in Psychology from the University of Oklahoma in 1975. I have been awarded honorary Ph.Ds by the University of Chicago in 1997 and Missouri State University in 2008. I work and reside in Des Moines, Iowa.

2. I submit this affidavit in support of Petitioner, The Nonhuman Rights Project, Inc. (“NhRP”), on behalf of Kiko, for a writ of habeas corpus. I am a non-party to this proceeding.

3. I am currently the President of Bonobo Hope and Co-Director of the Panbanisha Chimpanzee and Bonobo Sanctuary. I previously served as (in reverse chronological order): (1) an Affiliate Professor at Iowa State University, Simpson college for seven years; (2) a Professor, an Associate, and an Adjunct Professor in the Department of Biology & Psychology at Georgia State University over the course of twenty-five years; and (3) an Associate Research Professor, Assistant Research Professor, and Research Associate at the Yerkes Primate Research Center at Emory University over a twelve year period. I have regularly taught classes in primate behavior, evolution of innate behaviors, evolution of learned behavior, learning theory, developmental psychology, biology, psycho-biology of language, socio-biology, and introductory ethology.

4. During my career I have received sixteen awards from a variety of academic, research, nongovernment, media, and professional organizations. Some of the more notable include: (1) one of the most 100 influential scientists in the world by *Time Magazine* in 2010; (2) selection by the Millennium Project for inclusion on the 100 most influential works in cognitive science in the 20th century for my book titled, “Language comprehension in ape and child,” (1993, Monographs of the Society for Research in Child Development); (3) a Fellow at the American Psychological Association; and (4) a Woodrow Wilson Fellow (1970-1975). I have also received funding support from, the University of Oklahoma, National Control Devices, The Templeton Foundation, The Townsend Foundation, The Milt Harris Foundation for the study of intelligence, language and social behaviour in chimpanzees, beginning in 1972 and continuing to date.

5. I am affiliated with a number of professional organizations including the International Primatological Society and the American Psychological Association. During the course of my career, I have also received numerous research grants including grants from: (1) National Institute of Child Health and Human Development; (2) Biomedical Research Support Grant, Emory University; (3) World Wildlife Fund; and (4) The Templeton Foundation.

6. My research specialization is in the study of the language learning and cognition of chimpanzees and bonobos. I began studying the cognitive processes and linguistic behavior in captive chimpanzees in 1971. From 1972 to 1975, I conducted captive studies of mother-infant groups of chimpanzees. From 1975 to 1976, I studied the social behavioral of *Pan paniscus* and *Pan troglodytes*. Following that, I spent thirteen years (between 1976-1989) conducting studies of symbolic and cognitive processes in *Pan paniscus*, *Pan troglodytes*, and alinguistic *Homo sapiens*. In 1993, I spent a year studying free-ranging bonobos. From 1989 until present, I have studied the lexical and vocal linguistic ability, musical ability, tool manufacturing ability and general cognitive development of apes, with a specific focus on bonobos.

7. I have written or co-authored seven books, the most relevant include: (1) *Ape Language: From Conditioned Response to Symbol* (1986, New York: Columbia University Press); (2) *Kanzi: A Most Improbable Ape* (1993, NHK Publishing Co: Tokyo, JAPAN); (3) *Kanzi: The Ape at the Brink of the Human Mind* (1994, New York: John Wiley Publishers); (4) *Apes, Language, and the Human Mind* (1998, New York, NY: Oxford University Press); and (5) *Kanzi's Primal Language: The cultural initiation of apes into language* (2005, London: Palgrave/Macmillan). I have also appeared in five films on chimpanzees and apes, three NHK network (Japan) specials and one BBC special.

8. I have published 183 articles on the learning capability, behaviour, ecology, welfare, or conservation of chimpanzees, monkeys, and baboons. These articles are published in many of the world's most-cited peer-reviewed scientific journals, including: *Science*, *American Journal of Primatology*, *Folia Primatologica* (the official journal of the European Federation for Primatology), *International Journal of Primatology*, *Journal of Comparative Psychology*, *Journal of Human Evolution*, *Behavioral and Brain Sciences*, and *Journal of Experimental Psychology*, *Journal of Biology and Philosophy*. I have also published in *Proceedings of the Fifth International Congress of Primatology*, *Proceedings of the Sixth International Congress of Primatology*, *Contemporary Primatology*, *Encyclopedia Americana*, *Collier's Encyclopaedia*, *Encyclopaedia Britannica Yearbook*, *The Cambridge encyclopaedia of human evolution* and *Encyclopaedia of Neuroscience*. Specific topics of these publications include: the use of symbolization and language by chimpanzees, group formation among captive mother-infant chimpanzees, human-oriented courtship behavior in a human-reared chimpanzee, mothering behavior towards a kitten by a chimpanzee, play and socio-sexual behaviour in chimpanzees, chimpanzee communication, chimpanzee tool use, chimpanzee cognition, chimpanzees and protolanguage, primate intelligence, chimpanzee counting, communicative intentionality in the chimpanzee, the relationship between language in apes and human beings, summation in the chimpanzee, care of captive chimpanzees, imitation by an ape, grammatical development by an ape, the invention of protogrammar by an ape, imitative learning in chimpanzees, delay of gratification in chimpanzees, spontaneous logicomathematical constructions by chimpanzees, primate geometry, and ape consciousness.

9. I regularly give invited lectures and take part in international symposia on primatology, which I have done since 1978. In the United States, I have given lectures at

Columbia University, Emory University, Princeton University and the University of Chicago, among many other notable educational institutions. I have also given lectures and presentations on primates in other countries including: England, Japan, Canada, Germany, Australia, Portugal, France, Mexico, Sweden and Berlin.

10. My Curriculum Vitae sets forth my educational background and experience and is annexed to my original Affidavit, filed herewith.

Basis for Opinions

11. The opinions I state in this affidavit are based on my professional knowledge, education, training, research and fieldwork, as well as my review of peer-reviewed literature. A full reference list of peer-reviewed literature cited herein is annexed hereto.

12. In addition, the opinions set forth herein are based on many years of collaboration and research with my colleague, Duane Rumbaugh. Professor Rumbaugh and I have designed and implemented research experiments together in a joint laboratory and have co-authored numerous peer-reviewed articles.

Opinions

13. Chimpanzees and bonobos who acquire language are often asked to carry out duties and responsibilities and succeed. (Savage-Rumbaugh, Rumbaugh and Boysen, 1978a, Savage-Rumbaugh, 1986; Savage Rumbaugh, 1993). They enter into contractual agreements (such as "If you do X, I'll do Y.") They evidence an understanding of their duties and responsibilities both in their interactions with human beings and in their interactions with each other. (Savage-Rumbaugh, 1986a; Segerdahl, Fields and Savage-Rumbaugh, 2005). For example, one chimpanzee will remind another of the task at hand, if the attention wanders. (Savage-Rumbaugh, Rumbaugh and Boysen, 1978b). Bonobos in the wild have duties to see that

all members of the group have access to food, that all group members arrive at a feeding source together, and that all group members have access to that source in a manner that benefits the entire group. This requires cognitive concentration, social rules and a greater sense of social responsibility for the 'good' of the group than for fulfilling one's individual desires. (NHK Video, archive footage, Savage-Rumbaugh, in preparation; Savage-Rumbaugh, Williams, Furuichi and Kano, 1994; Kano, 1992). Chimpanzees inhabit sparser environments and therefore travel in smaller parties and generally feed at separate locations. However the larger "unit group" does travel together, though out of sight of one another. Individuals sleep separately, but in vocal contact with each other. The distances between a travelling group of chimpanzees make it mandatory for them to share similar information with one another. It appears that long distance vocalizations are employed to announce arrival at large food patches, and other information regarding food and planned travel patterns are shared among group members (Pruetz, archive video, Goodall, 1986; Boesch, 2012).

14. In the case of chimpanzees and bonobos whom I study in a cross-cultural linguistic (*Pan/Homo*) world, duties and responsibilities (and the moral imperatives they necessarily entail) are simply a part of everyday life.

15. The focus of the research is upon determining the degree to which both species of apes are capable of human language and human culture. Because human children acquire these abilities by being reared in families and villages where such capacities are naturally expected to emerge in their children, bonobos and chimpanzees were reared in a similar manner and with similar expectancies in order to equate the cultural and environmental experiences of both species. (The psychological literature is replete with findings that "expectancies" during rearing are a central component in establishing the capabilities that human children display). It is

noteworthy that these chimpanzees and bonobos were never treated as pets. They were *expected*, at all times, to behave as the self-conscious beings that apes are.

16. There are two critical capacities that allow for the emergence of symbolic thought and language, and thus the emergence of a self-conscious understanding of one's duties and responsibilities to the group, or the capacity to see one-self as others see them. The first is the capacity to cognitively step outside the "flow" of life and reflect upon it. Chimpanzees and bonobos reared in a language world clearly display this capacity. They recognize their shadows; they recognize themselves in mirrors; they apply bodily decorations; they intend beyond the immediacy of the current social situations in which they are engaged; they signal intent by means other than through the use of incipient actions; and they prevent their offspring from engaging in behaviors that could be dangerous, long before danger actually arises. "Danger" is thus "cognitively defined" rather than simply perceived. The second is the awakening of the ape child's desire to adopt and to accept duties and responsibilities. This awakening resides in the emotional cross-cultural attachments between group members. Both humans and apes engaged in this research display a degree of mutual trust and cooperation otherwise found only *within* a species, in a cross-cultural bi-species world.

17. The focus of ape language and cultural studies has been to determine the extent to which apes have the capacity for human forms of culture and language. Duties and responsibilities are a natural extension of both human language and human culture, though their documentation has not often been the focus of inquiry. As with many things, duties and responsibilities simply fall naturally out of the appearance of human language and culture. Therefore, documentation of these abilities listed here is to be found in visual material and descriptive accounts along with allusions to such abilities in studies dedicated to other topics. For

this reason, a general list of applicable references are provided as an addendum to this affidavit in place of a particular citation for each capacity reported herein.

18. Individual chimpanzees and bonobos vary widely in their interests and in the particular capacities they seek to master, as do human children. Often if one chimpanzee or bonobo excels in some skill, those close in age seek to excel in other skills. For example, Kanzi views himself as the expert stone tool maker and the expert fire maker in the group. He behaves as though it is his responsibility to demonstrate these skills, and to practice them. He clearly does not appreciate it if Panbanisha takes this role, or if she is asked to take this role by humans in the name of research. Panbanisha is the artist and story manufacturer, Elykia is the translator between human and bonobo languages, Teco is the one who found a way to cheer up the group when their spirits are low, Matata teaches the skills of the forest, Nathan was the mediator between the worlds, P-Suke was the sex symbol, Panzee was the puzzle solver, Maisha is the show-off, Sherman is the leader, Lana is the critic and Austin was the careful one. Each of these apes recognized the roles of the others and “stood down” when the recognized expert set about to demonstrate their capacities for human visitors.

19. Capacities indicative of the chimpanzees’ ability to assume duties and responsibilities and to make contractual agreements in the groups with which I worked included:

a. A conscious awareness of the fundamental importance of fire, accompanied by an understanding that fire is produced by a variety of different kinds of activities.

1) A conscious awareness of the need to responsibly practice this skill and to demonstrate it to human beings who place great value on it.

- 2) A conscious awareness of all the component skills required (finding dry twigs and leaves, placing them in a pile, lighting them, adding additional larger pieces of wood as fuel, not adding too much fuel and the need to keep the fire contained, the need to take to avoid being burned, and the need to put the fire out, lest it spread).
 - 3) A conscious awareness of the way in which fire alters the texture, taste, and desirability of various foods, making some better and others worse.
 - 4) A conscious awareness of the properties and material required to start fire, i.e., small dry sticks, paper, etc.
- b. A conscious awareness of how to cook a meal as a human would, accompanied by an understanding of the responsibility to practice this and to demonstrate to human beings this ability. Within activities that dealt with cooking, they were many sub-components they were willing to demonstrate, including:
- 1) Obtaining pots and pans
 - 2) Obtaining foods
 - 3) Chopping foods
 - 4) Mixing and stirring foods
 - 5) Heating foods
 - 6) Serving foods
 - 7) Extracting juices

- 8) Crushing seeds
 - 9) Blending foods as they processed them through different stages of heat
- c. Within their own social group they assumed responsibilities listed below:
- 1) Teaching younger group members rules about food sharing
 - 2) Teaching younger group members rules for how to interact with human beings
 - 3) Teaching younger group members about dangerous animals
 - 4) Protecting younger group members from dangerous animals
 - 5) Teaching younger group members about dangerous objects and/or locations in the environment
 - 6) Protecting younger group members from dangerous objects and/or locations in the environment
 - 7) Conveying vital information to other group members about the actions of humans as well as other group members that were out of site
 - 8) Teaching those members of the bonobo group who had little human contact how to employ lexical symbols in communicative exchanges with human
 - 9) Teaching those group members who had little human contact how to employ vocal symbols in exchanges with humans
 - 10) Informing group members of any unusual or suspicious actions on the part of humans

- 11) Informing group members of any unusual or suspicious actions on the part of animals
- 12) Those who could comprehend spoken English assuming the responsibility to translate for other members that were unable to comprehend spoken English
- 13) Taking into account which members were not receiving sufficient food from human caretakers who made their own rules about how much food various bonobos were allowed and flaunting human rules by hiding food for those members who were being underfed
- 14) Protecting young humans and young apes from falling or engaging in activities that could lead to harm
- 15) Seeing that needed items, such as blankets were distributed among the group in a responsible manner
- 16) Conveying to human beings whom they trusted, information regarding deceitful actions of other human beings
- 17) Conveying to human beings whom they trusted, information regarding physical harm done to them by human beings who tried to intimidate and frighten the bonobos by violent means
- 18) Reminding human beings of promises that had been made to themselves or to other members of their own social group
- 19) Taking responsibility for care of dogs and making certain that dogs were properly treated

- 20) Taking responsibility for care of orangutans and making requests for their needs when the orangutans were unable to do so for themselves
- d. A conscious awareness of the importance painting and writing serve as symbolic modes of expression. An understanding of the need to paint in a manner that is interpretable by human beings, and an ability to so do.
- e. A conscious awareness of the importance of making and understanding contractual agreements and promises (“If you do X I will do Y”, or “I do Y, will you promise to do X?”) and to keep them. These agreements are made linguistically and cover all manner of situations with both humans and other chimpanzees. Examples include:
- 1) “If you promise to stay with me, we will go outdoors.”
 - 2) “If you will watch Teco for me, while I go get tea, I will bring you some.”
 - 3) “If you want some Austin’s Cheerios, please give some of your peanuts to him.”
 - 4) “If you promise not the tear up this computer, you may use it.”
 - 5) “If you will show the visitors how to use the keyboard now, we will go outdoors and make a fire later.”
 - 6) “If you will promise to take care of the dog, I will let it play with you.”
 - 7) “If you will translate what Matata is saying, I will take you for a car ride.”

- 8) “If you leave a written note in the sand, X will read it on another day and leave here what you request.”
 - 9) “If you are good and help me while the visitors are here they will bring you a surprise.”
 - 10) “If you are quiet, no one will know we are here and we can listen to what they are saying.”
- f. A conscious awareness that humans are expected to uphold their end of contractual agreements and promises which they make to apes as well as to one another.
 - g. A conscious awareness of the importance humans attach to being able to tie knots and to link things together through this method.
 - h. A conscious awareness of the need to keep blankets and other nest-building materials laundered and folded and an awareness of the need to utilize clean blankets on the top side of the nest.
 - i. A conscious awareness of the importance humans place on the apes’ capacity to make stone tools, bone tools, and stick tools.
 - 1) A conscious awareness of the requirements of the various properties of these different classes of tools (i.e. stick tools can be fashioned with hands and teeth, stone tools must be fashioned with other stone, bones can be split lengthwise in a manner that stone and wood cannot, etc.).
 - 2) A conscious awareness of the uses to which tools of different shapes can be addressed.

- j. A conscious awareness of the need for child-care. This includes a great sensitivity to the needs of infants, both those belonging to self and those belonging to others. It includes a conscious monitoring of what the infant can and cannot do, as well as what an infant can and cannot understand. It demands a conscious understanding of the kinds of things that must be done to ensure an infant's safety. This includes an understanding that the needs of human infants and bonobos differ considerably. (This skill was not highly developed in Matata; however Panbanisha's monitoring of infants and their requirements was essentially at the human level). This care and caution is not only exhibited when the infant is in clear and present danger (as is the case with most animal.). The care and caution is exerted long before the infant becomes endangered.
- k. A conscious awareness of the need to keep the living facility clean according to human standards and to remove what humans designate as trash. Also a conscious awareness of what USDA inspectors search as demonstrated by helping to prepare for inspections (by hiding items they might asked to be removed from the enclosures, etc.).
- l. A conscious awareness of the importance of sharing food among group members in an appropriate manner according to bonobo food rules as taught by Matata who was wild-reared.
- m. A conscious awareness that most human beings neither understand, nor respect their capacity to employ symbols creatively and in contextually appropriate novel manners. They attempt to meet such persons more than

halfway, because they are keenly aware and understand that humans fail to grasp that any kind of symbolic system except their own could be symbolic or complex. Bonobos will go to great lengths to teach human words, preferring to do so only in contextually appropriate meaningful communicative contexts; because humans cannot grasp symbol meanings devoid of context.

- n. A conscious awareness that many humans fail to grasp that they understand spoken words and sentences at a high level. They will take great care to try and demonstrate this to humans in novel socially appropriate contexts. They have learned that responding in “test” situations, when humans repeat trials over and over, does little to convey their actual abilities and desire to avoid these settings. Some apes completely refuse them.
- o. A conscious awareness of numerosity, which gives them a grasp of numbers to twelve or more without actually counting. This can become accompanied by an awareness of the human desire for counting, and some apes have demonstrated behaviors that are true counting and reading.
- p. A conscious awareness of, and interest in, similar to that of human children, pretend play. This can be accompanied by a fascination with that play. This can take the form of object play, as when figures (toys representing apes) are engaged in actions of pretend attack. It can also take the form of pretending to do things to others such as pretending to be afraid, pretending to be angry, pretending to be asleep, pretending to hide,

pretending to be another entity (as in wearing a mask), or pretending not to hear or see something obvious. This fascination can extend to pretending to do things to other chimpanzee and/or bonobos to determine if they understand the pretense; for example whether other bonobos or chimpanzees understand that a plastic snake is not real, or that a person in a gorilla suit is not a gorilla.

- q. A conscious awareness of the power of deceit. This includes knowledge of “good” and “bad” and the capacity to label one’s own actions as belonging to one or the other of these categories.
- r. A conscious awareness of their ability to plan and co-ordinate group actions. This can be as simple as making a plan to make a fire and being sure that the needed items are packed, or as complex as making a plan to attack human beings who are perceived as deceitful or devious. Such plans are exchanged vocally and coordinated across space and time.
- s. A conscious awareness of the need to attempt to form connections with human beings on levels that human beings can understand. As experience with a variety of humans began to take place, the apes recognized that they needed to stretch their communicative competencies to try and enable human beings to understand their communications, their rules, and their view of what moral treatment entailed.

20. Bonobos and chimpanzees have a clear understanding of their strength relative to that of humans (much greater) and their speed and agility (far greater). They demonstrate that they understand the need to treat humans with care, whether the interactions be grooming, play,

tree climbing, etc. They slow down their pace, they exert exact control over their bodies and their teeth, with exceeding care and precision.

21. Bonobos and chimpanzees who have acquired language recognize the need to inform others of important information. They understand the circumstances that cause others to lack information they themselves have (often termed "Theory of Mind"). For example, they inform others of things that have led to danger, such as potential fires, wild dog packs nearby, branches on trees that are unstable, foods that are poisonous, location of hidden objects, causes of death of other group members, mistreatment of group members, deceit on the part of others, etc.

22. Bonobos and chimpanzees understand that they must remain in certain areas and that they must not harm or scare human beings who are visitors or who do not know them. Frequently, when doors are left open they refuse to go into areas where they are not allowed. If humans whom they do not know inadvertently enter their areas, they avoid those human beings, in recognition that interaction with them is prohibited by rules of the facility, unless they feel threatened.

23. Having acquired language, if bonobos or chimpanzees harmed human beings, it was inevitably the case that they perceived those human beings as either having broken rules of conduct, having said something insulting (often out of another's persons earshot) or having threatened them or persons they trust.

24. Having acquired language, bonobos and chimpanzees become increasingly trustworthy and responsible as they pass out of adolescence and into adulthood. They assume roles of group monitoring and teaching of children.

25. Having acquired language, bonobos and chimpanzees presume that humans will explain their intentions and that they are to do likewise. Every interaction becomes a linguistically negotiated contract. These contracts can be applied to time periods that are days, weeks and even years ahead and will be remembered and enacted at the appropriate time.

26. Whenever there exists a disagreement between a human and a chimpanzee or bonobo who has acquired language, the disagreement can be solved by explaining the reasons for the action. For example, if a bonobo does not wish a person to leave and stands in front of the door, repeatedly insisting they remain in the cage; this behavior can be negotiated by an explanation of the reason for leaving - such as dentist appointment, etc.

27. Bonobo and chimpanzees keep promises and secrets. In the wild, adult males use this capacity to stealthily approach other groups for purposes of surprise attack. In captivity, having acquired a human language, they remind others of events such as birthdays, days visitors are expected, etc. They remind caretakers of trash that has not been carried out, drains that are clogged, computer programs that are mis-performing, etc. If Panbanisha requested foods that she was not allowed to have while on a diet, she would indicate to her caretakers to keep it a "secret." Other "secrets" were certain kinds of knowledge, shared with only the most trusted, such as if an important object had been hidden for emergency use.

28. When apes are taken out of doors on leads they are asked to promise to be good, not to harm anyone and to return when asked. If they promise these things they keep their promise. Should they decide they are not going to keep such a promise, reminding them of the promise, the need for and the reason for it, has always been sufficient to reinstate the promise. If they are not capable of understanding language at that level, they do not make and/or keep promises except for the immediate future (five minutes), and cannot be taken outdoors on leads.

But language extends the time of promise keeping to years, thus serving as an extremely power mechanism for the development of very complex group networks of social obligations, responsibilities and duties.

29. Ape children acquire the moral sense and duties of both cultures and the languages of both cultures. Self-aware beings cognizant of their own identity, they come to desire to engage in mutually responsible moral actions. They come to display a sense of loyalty, duty, honor, and mutual respect which takes cognizance of the individuality and free-will of other self-aware beings. However, they extend this to human beings only as long as they are, in turn, treated similarly.

30. Adult chimpanzees and bonobos, when reared in the proper manner, also become capable of duties and responsibilities that are “self-assigned.” They also acquire an understanding of how to behave in a manner that they begin to perceive as culturally appropriate for humans. As this occurred, they began to demonstrate a sense of responsibility to help the human members of their Pan/Homo world attempt to show visitors how to begin to cross the species boundary. Additionally some *Pan* members, as they entered their decade of life, began to study this problem themselves and reflect upon it. This surprising event occurred when the Pan/Homo group found themselves relocated to a new facility where they had to cope with large numbers of people who viewed the *Pan* members as basically nonsentient, nonknowing, nonself-reflective beings.

31. In response to the highly distressing event of relocation to facility where they were all were treated very differently than had been the case at the Language Research Center where they were reared, Kanzi, Panbanisha and Nyota each began to try to find their own ways to help shoulder the new responsibilities imposed upon this *Pan/Homo* group. They started to

assist those that the outsiders viewed as their “experimenters.” Panbanisha began to repeatedly watch and comment on documentaries about human/ape differences. The earliest that caught her attention was “Harry and the Hendersons,” which she watched over and over as child. As an adult, she studied the specials on PBS and the Discovery Channel. She also began to translate Kanzi’s vocal utterances onto the keyboard. Elykia began to understand some English and started to offer running translations of what humans were saying for her mother Matata, and her brother Maisha, knowing that they could not understand human language. Kanzi began to pose for photographers, doing precisely as they asked, so the photographers did not have to watch and “wait” for their shot. He began to carry out scenes for videographers precisely as they asked. Kanzi also taught Elykia (his mother Matata's fourth daughter) how to smile for the camera, and for visitors. Panbanisha began teaching Matata how to use the symbol board filled with lexigrams, which she had acquired spontaneously as an infant, even before she began to speak “bonobo.”

32. Maturation in the Pan/Homo world began to reflect back upon the wild caught bonobo matriarch of the group Matata. She had *refused* for decades to view the keyboard as a linguistic device. Once her children, Kanzi and Panbanisha, grew up and were regularly employing it to communicate with humans, each other, and their offspring, Matata started to show a greater interest in the potential of this device. Also at this point, her children began to be able to vocally translate lexigrams into bonobo speech for her. As she began to grasp the true function of the keyboard, she started to study it for hours at a time; but always hid it, if caught doing so. She continued to act as though she did not know lexigrams, but when the situation was urgent or critical, she could produce fully complete appropriate sentences; for example, one day when she became ill, she requested, “Give green medicine.”

33. It was in the conscious awareness of the bonobos and chimpanzees of the implicit agendas and external goals of their *Pan/Homo* group that one could most clearly discern the emergence of their capacity to assume duties and responsibilities in a human-like manner. They understood not only what they were doing, but why they were doing it. As is the case with humans, their understanding increased with age and experience. Similarly their recognition of the degree to which persons who were outside their immediate *Pan/Homo* family *misunderstood* them increased. They became highly creative in trying to reach across the divide to even the most incredulous human beings. They slowed down their actions and sounds, they exaggerated them, they repeated them, they blended sounds, gestures and lexigrams and they waited till they noted that the humans were observing or their cameras were turned off before they engaged them. While these were skills that the human members of the group could model, they could never have been taught. Close observation of the behavior of others, while reflecting on the intent of others, requires the knowledge that the “other” has a mind, that the contents of two minds are not always the same, and that one must pay attention to the “attention” of the other if one wishes to successfully redirect their perspectives, ideas, views, etc.

34. Both species in a *Pan/Homo* world become intensely aware of their differences and their similarities and engage in real and mutual trust and cooperation. Both species understand the magnitude of this event and that it requires far more than simple friendship. All sentient self-knowing entities, such as chimpanzees and bonobos, endowed with a sense of “I am” manifest the self-understanding, self-knowledge and self-choice that enable them to recognize, respect and acknowledge *the existence of a similar capacity* in the other species. In this regard it is noteworthy, that while both apes and humans can love, rear, care for and interact with canids, adults of both species recognize that canids are incapable of the kind of self-

knowledge that adult humans and adults apes possess. Therefore, neither species holds dogs responsible for "intentional actions" in the same way that hold other adult humans and/or apes responsible for such actions. Apes did however, display far less patience with misbehavior on the part of dogs than the human members of their *Pan/Homo* culture. In part this was because when dogs attached themselves and their allegiance to particular apes and not others, this proved unsettling to the group.

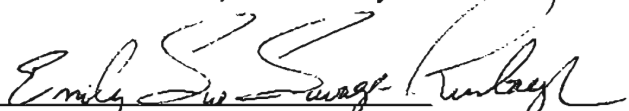

Wild Chimpanzees and Bonobos

35. In essence the species-boundary that normally separates *Pan* and *Homo* can become extremely permeable, allowing cultural process to become cleanly separated from that which we normally think of as "species-specific" behaviors. Any human-like behaviors that appeared in this work demonstrate these capacities of apes and are likely to exist in wild apes, albeit in a different cultural form and possibly not yet understood.

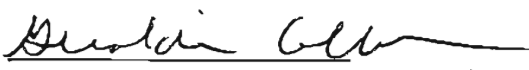

36. Wild bonobos and chimpanzees demonstrate the ability to harvest a constantly changing forest. Their mental mapping is extremely fluid, rapid and highly accurate. Chimpanzees and bonobos obtain food without weapons and hunting is more of luxury than common event. Meat is the only food reportedly shared by chimpanzees, who inhabit sparser environments and who are thus moving farther toward the lifestyles of human beings. Bonobos share all foods in their diet. For bonobos to harvest their territories without the swidden agricultural practices- employed by human beings living in the same areas requires considerable planning, group communication, group co-ordination and cooperation. Everyone must fulfill his or her responsibilities for it to succeed. The group must agree to travel together long distances each day - without food - in order to arrive a particular food resource together. The resource the group agrees to harvest one day will determine the options for travel that it will encounter the following day. Incorrect choices will lead to hunger for the entire group as the forest is a

plentiful larder, but only if it is well known, well predicted and the entire group, infants, juveniles, pregnant females and the elderly are able to travel, as a group, the long distances required for harvesting. The planning required to make those critical decisions must be agreed to by the entire group and communicated, for the groups split up during travel, but arrive together a common feeding resource. The mapping problem for traveling through a forest that is ripening in a very complex and somewhat variable manner is similar to the traveling salesman problem. This not only requires advance planning but constantly updated information as well in order maximize options for scheduling, sequencing, resource allocation and time investment planning.

37. Advance planning and sharing of information is a duty and responsibility that lies at the heart of bonobo and chimpanzee survival in the wild. No bonobo or chimpanzee group could survive if its members failed to carry out these assigned duties and responsibilities to the group. They would cease to locate sufficient food, their youngsters would become easy prey, or they would have to try to make it on their own, which would be dangerous. Chimpanzees and bonobos place great emphasis on activities that are devoted to monitoring one another and to the deep insults, threats, fears and angers that are generated when the actions of any group member threaten the unity and cohesion of the group. Chimpanzees and bonobos take immediate insult and vociferous exception to all such actions. They monitor themselves and their rivals and react to any disturbances in what they perceived as a change in the group balance of power, distribution of resources, or inappropriate behaviors and/or alliances, even friendly alliances.

Emily Sue Savage-Rumbaugh

Sworn to before me
this 17th day of December, 2015

Attorney at Law of the state of New Jersey

Notary Public

STATE OF New Jersey)
) ss:
 COUNTY OF Middlesex)

On the 1st day of December in the year 2015 before me, the undersigned, a notary public in and for said state, personally appeared Emily Sue Savage - Rumbaugh personally known to me or proved to me on the basis of satisfactory evidence to be the individual whose name is subscribed to the within instrument and acknowledged to me that he/she executed the same in his/her capacity, and that by his/her signature on the instrument, the individual, or the person upon behalf of which the individual(s) acted, executed the instrument, and that such individual made such appearance before me the undersigned in the County of Middlesex and the State of New Jersey.

Geraldine Callahan
 Notary Public Geraldine Callahan
 Attorney at Law of the State of
 My Commission Expires: _____ New Jersey

SUPREME COURT OF THE STATE OF NEW YORK
COUNTY OF NEW YORK

In the Matter of a Proceeding under Article 70 of the
CPLR for a Writ of Habeas Corpus,

THE NONHUMAN RIGHTS PROJECT, INC., on behalf
of KIKO,

**CERTIFICATE OF
CONFORMITY**

Petitioner,

-against-

Index No.

PATRICK C. LAVERY, individually and as an officer of
Circle L Trailer Sales, Inc., DIANE LAVERY, and
CIRCLE L TRAILER SALES, INC.,

Respondents.

STATE OF New Jersey)
) ss:
COUNTY OF Middlesex)

1. This Certificate of Conformity is submitted pursuant to New York CPLR 2309(c)
and New York Real Property Law § 299-a.

2. I am an attorney duly licensed to practice law in New Jersey

3. I certify that the Affidavit of Emily Sue Savage-Rumbaugh, signed and dated on
December 1, 2015 was taken in the manner prescribed by the laws of New Jersey

Dated: December 1, 2015

Donald Allen

Proposed Order to Show Cause
[pp. 641 - 643]

At I.A.S Part _____ of the
Supreme Court of the State of
New York, held in and for the
County of New York, at the
Courthouse thereof, 80 Centre
Street, New York, NY, on the
_____ day of _____, 2016

PRESENT: HON. _____
Justice of the Supreme Court

SUPREME COURT OF THE STATE OF NEW YORK
COUNTY OF NEW YORK

-----x

In the Matter of a Proceeding under Article 70 of the CPLR
for a Writ of Habeas Corpus,

THE NONHUMAN RIGHTS PROJECT, INC., on
behalf of KIKO,

**ORDER TO SHOW CAUSE &
WRIT OF HABEAS CORPUS**

Petitioner,

-against-

Index No.:

CARMEN PRESTI, individually and as an officer and
director of The Primate Sanctuary, Inc., CHRISTIE E.
PRESTI, individually and as an officer and director of
The Primate Sanctuary, Inc., and THE PRIMATE
SANCTUARY, INC.,

Respondents.

-----x

TO THE ABOVE NAMED RESPONDENTS:

PLEASE TAKE NOTICE, That upon the annexed Verified Petition of Elizabeth Stein,
Esq. and Steven M. Wise, Esq. (subject to *pro hac vice* admission), with Exhibits and
Memorandum of Law, dated January 6, 2016, and upon all pleadings and proceedings herein, let
the Respondents CARMEN PRESTI, individually and as an officer and director of The Primate

Sanctuary, Inc., CHRISTIE E. PRESTI, individually and as an officer and director of The Primate Sanctuary, Inc. and THE PRIMATE SANCTUARY, INC., or their attorneys, SHOW CAUSE at I.A.S. Part _____, Room _____, of this Court to be held at the Courthouse located at 80 Centre Street, New York, New York 10013, on the _____ day of _____, 2016 at _____ o'clock in the _____ of that day, or as soon thereafter as counsel can be heard, why an Order should not be entered granting Petitioner, The Nonhuman Rights Project, Inc. (“NhRP”), the following relief:

- A. Upon a determination that Kiko is being unlawfully detained, ordering his immediate release and transfer forthwith to an appropriate primate sanctuary;
- B. Awarding the NhRP the costs and disbursements of this action; and
- C. Such other and further relief as this Court deems just and proper.

It is THEREFORE:

ORDERED THAT, Sufficient cause appearing therefore, let service of a copy of this Order and all other papers upon which it is granted upon CARMEN PRESTI, individually and as an officer and director of The Primate Sanctuary, Inc., CHRISTIE E. PRESTI, individually and as an officer and director of The Primate Sanctuary, Inc. and THE PRIMATE SANCTUARY, INC. by personal delivery, on or before the _____ of _____, 2016, be deemed good and sufficient. An affidavit or other proof of service shall be presented to this Court on the return date fixed above.

IT IS FURTHER ORDERED, that answering affidavits, if any, must be received by Elizabeth Stein, Esq., 5 Dunhill Road, New Hyde Park, New York 11040, and electronically filed with the NYSCEF system, no later than the _____ of _____, 2016.

Dated: _____
New York, New York

Honorable

ENTER:

**Memorandum of Law in Support of Petition
for Habeas Corpus, dated January 6, 2016
[pp. 644 - 779]**

FILED: NEW YORK COUNTY CLERK 01/07/2016 06:26 PM

NYSCEF DOC. NO. 40

INDEX NO. 150149/2016

RECEIVED NYSCEF: 01/07/2016

SUPREME COURT OF THE STATE OF NEW YORK

TABLE OF CONTENTS

	<u>Page</u>
TABLE OF AUTHORITIES	v
I. SUMMARY OF NEW GROUNDS AND FACTS NEITHER PRESENTED NOR DETERMINED IN <i>NONHUMAN RIGHTS PROJECT, INC., EX REL. KIKO v. PRESTI</i> OR <i>NONHUMAN RIGHTS PROJECT, INC. ON BEHALF OF TOMMY v. LAVERY</i>	1
II. INTRODUCTION AND PROCEDURAL HISTORY	6
III. STATEMENT OF FACTS	11
A. CHIMPANZEE AUTONOMY	11
1. INTRODUCTION.	11
2. SIMILARITIES BETWEEN CHIMPANZEES AND HUMANS: PHYSIOLOGY, DNA, AND COGNITION	12
3. SIMILARITIES BETWEEN CHIMPANZEES AND HUMANS: BEHAVIOR, MENTAL AND EMOTIONAL PROCESSES.....	13
a. Self-recognition and self-awareness	14
b. Self-control and episodic memory.....	14
c. Language, communication, and intention.....	16
d. Imagination and humor.....	19
e. Theory of mind	20
f. Empathy.....	21
g. Awareness of death.....	22
h. Tool-making and chimpanzee culture	22
i. Imitation and emulation.....	24
4. SIMILARITIES BETWEEN CHIMPANZEES AND HUMANS: NUMEROSITY, SEQUENTIAL LEARNING AND MEMORY	26

B. CHIMPANZEES SHOULDER DUTIES AND RESPONSIBILITIES BOTH WITHIN CHIMPANZEE SOCIETIES AND WITHIN CHIMPANZEE/HUMAN SOCIETIES.	27
1. INTRODUCTION.	27
2. CHIMPANZEES ROUTINELY SHOULDER DUTIES AND RESPONSIBILITIES WITHIN WILD CHIMPANZEE SOCIETIES.	29
a. Familial duties and responsibilities.....	29
1) Maternal duties.....	29
2) Paternal duties.....	30
3) Sibling duties.....	31
b. Duties beyond kinship: adoption.....	32
c. Cooperation and group belonging: solidarity in between-group contexts.....	33
d. Social dynamics: male hierarchy.....	35
e. Lawful and rule-governed/policing within chimpanzee societies.....	36
f. Cooperation and group belonging: within-group solidarity.....	37
1) Help and tending of injured or vulnerable group members.....	37
2) Food sharing and hunting duties.....	38
3) Informing group members about danger.....	41
4) Death-related duties.....	42
3. CHIMPANZEES SHOULDER DUTIES AND RESPONSIBILITIES WITHIN CAPTIVE CHIMPANZEE SOCIETIES.	43
4. CHIMPANZEES SHOULDER DUTIES AND RESPONSIBILITIES WITHIN CHIMPANZEE/HUMAN SOCIETIES.....	44
a. Promise-keeping and fair exchanges in chimpanzee/human societies.....	44
b. Duties and responsibilities in interactions with humans.....	45

c. Language-trained chimpanzees exhibit an enhanced ability to shoulder duties and responsibilities.....	48
1) Chores.....	48
2) Moral behavior	49
3) Other “human-like” duties.....	52
C. NATIONAL INSTITUTION OF HEALTH STUDIES AND SAVE THE CHIMPS.	60
IV. ARGUMENT.....	62
A. THE NhRP HAS STANDING TO BRING THIS HABEAS CORPUS PETITION	62
B. VENUE IS PROPER IN NEW YORK COUNTY	63
C. NEITHER RES JUDICATA, COLLATERAL ESTOPPEL, NOR CPLR 7003(b) BARS THE ISSUANCE OF AN ORDER TO SHOW CAUSE IN THIS SECOND KIKO PETITION	65
D. A PERSON ILLEGALLY IMPRISONED IN NEW YORK IS ENTITLED TO A COMMON LAW WRIT OF HABEAS CORPUS	68
1. “Person” is not a synonym for “human being,” but designates an entity with the capacity for legal rights.....	69
2. The Third Department’s <i>Lavery</i> decision does not bind this Court	73
3. <i>Lavery</i> was wrongly decided	74
a. The ability to shoulder duties and responsibilities is not, and has never been, necessary for legal personhood, especially for the purpose of a common law writ of habeas corpus	74
b. The Third Department exceeded its authority by taking judicial notice, without notice to the parties, that chimpanzees lack the capacity to shoulder duties and responsibilities.....	85
c. If the capacity to shoulder duties and responsibilities is required for personhood, the NhRP has demonstrated that Kiko possesses that capacity.....	88

4. As common law natural persons are presumed free, Respondents must prove they are not unlawfully imprisoning Kiko	88
5. Because Kiko is being unlawfully detained, he is entitled to immediate discharge	90
E. KIKO IS A “PERSON” WITHIN THE MEANING OF THE COMMON LAW OF HABEAS CORPUS AND THEREFORE CPLR 7002(A)	98
1. The term “person” in Article 70 refers to its meaning at common law	98
2. As Kiko is autonomous and self-determining, he is a common law “person” entitled to the common law right to bodily liberty that the common law of habeas corpus protects	103
3. Kiko is entitled to the common law equality right to bodily liberty that the common law of habeas corpus protects	105
4. The New York legislature has already determined that some nonhuman animals are persons in the trust context	113
V. CONCLUSION	115

N.Y. Const. Art. I, § 14 7

I. SUMMARY OF NEW GROUNDS AND FACTS NEITHER PRESENTED NOR DETERMINED IN *NONHUMAN RIGHTS PROJECT, INC., EX REL. KIKO v. PRESTI* OR *NONHUMAN RIGHTS PROJECT, INC. ON BEHALF OF TOMMY v. LAVERY*.

This is the second Verified Petition for a Writ of Habeas Corpus and Order to Show Cause filed by the Petitioner, the Nonhuman Rights Project, Inc. (“NhRP”), pursuant to New York Civil Practice Law and Rules (“CPLR”) Article 70, on behalf of Kiko, a chimpanzee who has long been imprisoned in a cement storefront in Niagara Falls, New York (“Second Kiko Petition”). This Second Kiko Petition sets forth grounds distinct from the first petitions filed on behalf of Kiko, as well as a chimpanzee named Tommy, *infra*, none of which were determined by this Court or any other court. See CPLR 7003(b).

The first Verified Petition for a Writ of Habeas Corpus and Order to Show Cause was filed on behalf of Kiko (“First Kiko Petition”) in the New York State Supreme Court, Niagara County, on December 3, 2013. That Supreme Court refused to issue the order to show cause and its refusal was affirmed by the New York State Supreme Court Appellate Division, Fourth Judicial Department (“Fourth Department”) in *Nonhuman Rights Project, Inc., ex rel. Kiko v Presti*, 124 A.D.3d 1334 (4th Dept. 2015), *leave to appeal den.*, 126 A.D. 3d 1430 (4th Dept. 2015), *leave to appeal den.*, 2015 WL 5125507 (N.Y. Sept. 1, 2015).

On December 2, 2015, the NhRP filed a second Verified Petition for a Writ of Habeas Corpus and Order to Show Cause on behalf of Tommy in this Court. See *Nonhuman Rights Project, Inc. on behalf of Tommy v. Patrick C. Lavery et al*, Index #: 162358/2015 (Dec. 2, 2015) (“Second Tommy Petition”). On December 23, 2015, this Court declined to sign the order to show cause in the Second Tommy Petition, writing, “to the extent that the courts in the Third Dept. determined the legality of Tommy’s detention, an issue best addressed there, & absent any allegation or ground that is sufficiently distinct from those set forth in the first petition (CPLR 7003(b)[]).” (Index #: 162358/2015, Doc. No. 57).

The NhRP had filed the first Verified Petition for a Writ of Habeas Corpus and Order to Show Cause on behalf of Tommy in the New York State Supreme Court, Fulton County on

December 2, 2013 (“First Tommy Petition”). That Supreme Court’s refusal to issue the order to show cause was affirmed by the New York State Supreme Court Appellate Division, Third Judicial Department (“Third Department”) on the novel legal ground that only those entities able to shoulder duties and responsibilities can be “persons.” In addition, the court made a factual finding that chimpanzees lack the capacity to shoulder duties and responsibilities that was not based upon any facts presented to either the Supreme Court or the Third Department, as no relevant facts were introduced by either party. *People ex rel. Nonhuman Rights Project, Inc. v. Lavery*, 124 A.D.3d 148, 150-53 (3d Dept. 2014), *leave to appeal den.*, 26 N.Y.3d 902 (2015)). *See infra* at 85-88.

In this second attempt to secure habeas corpus relief for Kiko, the NhRP has supplied this Court with approximately sixty pages of new affidavits from six of the world’s leading primatologists, including Dr. Jane Goodall, that are distinct from those set forth in the First Kiko Petition. For the first time, they demonstrate that chimpanzees not only have the capacity to shoulder duties and responsibilities but, as a matter of fact, routinely shoulder duties and responsibilities both within chimpanzee societies and within mixed chimpanzee/human societies. These six new affidavits are as follows:

- (a) Supplemental Affidavit of James R. Anderson
- (b) Supplemental Affidavit of Christophe Boesch
- (c) Affidavit of Jane Goodall
- (d) Supplemental Affidavit of Mary Lee Jensvold
- (e) Supplemental Affidavit of William C. McGrew
- (f) Supplemental Affidavit of Emily Sue Savage-Rumbaugh

Section III-B of this Memorandum of Law sets forth the facts contained in these six new affidavits and specifically demonstrate that chimpanzees such as Kiko do, as a matter of scientific fact, possess the capacity to shoulder duties and responsibilities both within chimpanzee societies and mixed chimpanzee/human societies. This capacity includes, but is not limited to, the ability to understand and carry out duties and responsibilities while knowingly

assuming obligations and then honoring them, to behave in ways that seem both lawful and rule-governed, to have moral inclinations and a level of moral agency, to ostracize individuals who violate social norms, to respond negatively to inequitable situations, to have a social life that is cooperative and represents a purposeful and well-coordinated social system, to routinely enter into contractual agreements, keep promises and secrets, prefer fair exchanges, perform death-related duties and show concern for others' welfare.¹ These entirely new facts presented in the six new affidavits now comprise nearly sixty percent of the total facts presented in this Second Kiko Petition.

Pursuant to CPLR 7003(b), a court is not required to issue a writ from a successive petition for a writ of habeas corpus only if: (1) the legality of a detention has been previously determined by a court of the State in a prior proceeding for a writ of habeas corpus, (2) the petition presents no ground not theretofore presented and determined, and (3) the court is satisfied that the ends of justice will not be served by granting it.² The ground that chimpanzees routinely shoulder duties and responsibilities both within chimpanzee societies and within mixed chimpanzee/human societies and therefore can be “persons” for the purpose of demanding a common law writ of habeas corpus, and the facts that support it, have never been presented to this Court or any other court on behalf of Kiko. With the exception of the Second Tommy Petition, the facts supporting the ground that chimpanzees shoulder duties and responsibilities have never been presented to any court in the State of New York.

The NhRP, both in this Second Kiko Petition and in this supporting Memorandum of Law, demonstrates that the Third Department in *Lavery* improperly concluded as a matter of *fact* that chimpanzees are not “persons” as they are unable to shoulder duties and responsibilities and

¹ Chimpanzees exhibit capacities for charity, fairness, reciprocity, compassion, empathy, peace-making, and impartial leadership, all of which lead to their sense of justice. John Berkman, “Just Chimpanzees? – A Thomistic Perspective of Ethics in a Nonhuman Species,” in *Beastly Morality – Animals as Ethical Agents* 195, 202-219 (Jonathan K. Crane, ed. Columbia University Press 2016).

² See Section IV-C of this Memorandum of Law, pages 65-68, *infra*, in which the NhRP demonstrates that this Court may issue this order to show cause as none of the elements of CPLR 7003(b) are satisfied in the case at bar.

that this Court is not bound by that specific factual finding. The NhRP also alleges and demonstrates that the grounds set forth in the Second Kiko Petition are sufficiently distinct both from the grounds it set forth in the First Kiko Petition and from the grounds it alleged in *Lavery*, that this Court should, as a matter of justice, issue the requested order to show cause.

Significantly, the Fourth Department in *Presti* never determined the legality of Kiko's detention, did not reach the issue of Kiko's legal personhood, and did not cite to *Lavery*. Instead, it affirmed the dismissal of the First Kiko Petition on the sole ground that the NhRP was not seeking Kiko's immediate and unconditional release, but was seeking instead to have Kiko placed in an appropriate primate sanctuary. *Presti*, 124 A.D.3d at 1335. The Fourth Department twice suggested, without deciding, that it might agree with the NhRP's claim that Kiko was a "person" for the purpose of Article 70, stating that "[r]egardless of whether we agree with petitioner's claim that Kiko is a person within the statutory and common law definition of the writ . . ." and "even assuming, *arguendo*, that we agreed with petitioner that Kiko should be deemed a person for the purpose of the application." *Id.* These statements were made with full knowledge of the fact that the month before, the Third Department in *Lavery* had affirmed the Fulton County Supreme Court's refusal to issue the order to show cause for Tommy by setting forth the unprecedented legal rule that only entities capable of shouldering duties and responsibilities could be "persons."

On March 19, 2015, the NhRP filed with this Court a second Verified Petition for a Writ of Habeas Corpus and Order to Show Cause on behalf of two chimpanzees named Hercules and Leo, who had been imprisoned for six years at the State University of New York at Stony Brook ("Second Hercules and Leo Petition"). On April 21, 2015, the Court issued an amended order to show cause requiring the respondents to appear before the Court to justify their imprisonment of Hercules and Leo. *See The Nonhuman Rights Project, Inc. v. Stanley Jr., M.D.*, 2015 WL 1804007 (Sup. 2015) *amended in part*, *The Nonhuman Rights Project, Inc. v. Stanley*, 2015 WL 1812988 (Sup. 2015). In its decision, this Court stated that it was not bound by the Fourth Department's decision in *Presti* and rejected respondents' argument that, because the NhRP

sought Hercules and Leo’s “transfer to a chimpanzee sanctuary, it has no legal recourse to habeas corpus,” as habeas corpus has been used to “secure [the] transfer of [a] mentally ill individual to another institution.” *Stanley*, 16 N.Y.S.3d at 917 n.2. Instead, this Court recognized that the New York State Supreme Court Appellate Division, First Judicial Department (“First Department”), unlike the Fourth Department, has acknowledged that the Great Writ may be used to transfer an imprisoned person from an unlawful place of custody to another lawful form of confinement. *See id.* (citing *McGraw v. Wack*, 220 A.D.2d 291, 292 (1st Dept. 1995); *Matter of MHLS v. Wack*, 75 N.Y.2d 751 (1989)).

For the purpose of Kiko’s Second Petition at bar, the NhRP understands, albeit respectfully disagrees, that this Court considers itself bound by the Third Department’s novel legal rule in *Lavery*. However, the Third Department ventured far beyond merely promulgating a novel legal rule. It further stated that chimpanzees are incapable of shouldering duties and responsibilities, thereby effectively and erroneously taking judicial notice of the plainly erroneous scientific fact that chimpanzees lack the capacity to shoulder duties and responsibilities, *People ex rel. Nonhuman Rights Project, Inc. v. Lavery*, 124 A.D.3d 148, 150-53 (3d Dept. 2014), *leave to appeal den.*, 26 N.Y.3d 902 (2015), as the NhRP never presented any facts relevant to the issue of duties and responsibilities to either the Fulton County Supreme Court or the Third Department, and neither did the Respondent, as the Supreme Court denied the requested order to show cause *ex parte*.³

The NhRP has failed to locate a single New York case in which *stare decisis* was applied to a finding of *fact*, much less a fact found by judicial notice by an appellate court, much less a fact found in an entirely different case in a different judicial department. This Court is therefore not bound by this entirely unsupported finding of *fact*, as opposed to a binding *ruling of law*, made by an appellate court in a different case, especially when no relevant facts were presented to that court and that court erroneously took judicial notice of a hotly disputed fact. “The doctrine of

³ See the argument, *infra* at 85-88, as to why it was improper for the Third Department to take judicial

stare decisis ‘recognizes that *legal questions*, once resolved, should not be reexamined every time they are presented.’ *Dufel v. Green*, 198 A.D.2d 640, 640 (3d Dept. 1993), *affd.* 84 N.Y.2d 795 (1995). “‘The doctrine . . . rests upon the principle that a court is an institution, not merely a collection of individuals, and that governing *rules of law* do not change merely because the personnel of the court changes.’” *People v. Bing*, 76 N.Y.2d 331, 338 (1990) (emphasis added). *Accord People v. Taylor*, 9 N.Y.3d 129, 148 (2007) (same).

The Third Department’s statement, not of law but of scientific fact, that chimpanzees lack the capacity to shoulder duties and responsibilities, was made without the benefit of any briefing, argument, or reference to scientific authority by either party or the court. Given that the NhRP now sets forth approximately sixty pages of expert affidavits regarding the capacity of chimpanzees to shoulder duties and responsibilities — allegations and grounds more than “sufficiently distinct” from the first petition – applying *stare decisis* to the Third Department’s erroneous fact-finding in Tommy’s case to Kiko’s case would only serve to perpetuate that court’s plain and unreasonable fact-finding error.

II. INTRODUCTION

Chimpanzees are autonomous and self-determining beings who are capable of shouldering duties and responsibilities. They recall their past and anticipate their future, and when their future is incarceration, they suffer the pain of being unable to fulfill their life’s goals or move about as they wish, much in the same way as human beings.

This Second Kiko Petition and Memorandum of Law establish as a matter of law and fact that Kiko is a “person” for purposes of demanding a common law writ of habeas corpus both as a matter of common law equality and liberty. Justice demands that this Court exercise its discretion under the Great Writ and issue the requested Order to Show Cause pursuant to CPLR 7003(a), hold the required hearing in order to determine the legality of Kiko’s detention, release Kiko from unlawful imprisonment, and then decide where best to place him. The NhRP strongly urges that Kiko be placed in the custody of Save the Chimps, a premier chimpanzee sanctuary located on 190 acres in Fort Pierce, Florida, where he will live out his life with numerous other

chimpanzees in an environment as close to Africa as may be found in North America that allows him to freely exercise his autonomy.

This Court need not make a determination at this time, however, that Kiko is a “person” in order to issue the Order to Show Cause. Rather it should follow the laudatory procedure used by this Court in *Stanley* in which it properly assumed, without deciding, that Hercules and Leo were “persons” and “signed petitioner's order to show cause.” *Stanley*, 16 N.Y.S.3d at 900; *see also id.* at 904-05 (“Petitioner invokes CPLR 7003 (a). . . . That statute provides, . . . ‘where the petitioner does not demand production of the person detained . . . order the respondent to show cause why the person detained should not be released.’ This proceeding thus commenced with the signing of an order to show cause.”). This was the procedure used by Lord Mansfield in the famous common law habeas corpus case of *Somerset v. Stewart*, Lofft 1, 98 Eng. Rep. 499 (K.B. 1772), where the great Chief Justice assumed, without deciding, that the slave, James Somerset, could possibly possess the right to bodily liberty protected by the common law of habeas corpus, and issued the writ that required the respondent to provide a legally sufficient reason for Somerset’s detention, and by the Court for the Correction of Errors in *In re Tom*, 5 Johns. 365 (N.Y. 1810) (*per curiam*), which issued a writ of habeas corpus upon the petition of a slave who claimed he had been manumitted and was being unlawfully detained as property.⁴

The New York “common-law writ of habeas corpus [is] a writ in behalf of liberty, and its purpose [is] to deliver a prisoner from unjust imprisonment and illegal and improper restraint.” *People ex rel. Pruyne v. Walts*, 122 N.Y. 238, 241-42 (1890). It “is not the creature of any statute . . . and exists as a part of the common law of the State.” *People ex rel. Tweed v. Liscomb*, 60 N.Y. 559, 565 (1875). *E.g.*, *People ex rel Lobenthal v. Koehler*, 129 A.D.2d 28, 30 (1st Dept. 1987) (“The ‘great writ’, although regulated procedurally by article 70 of the CPLR, is not a creature of statute, but a part of the common law of this State.”); *People ex rel. Patrick v. Frost*,

⁴ New York’s adoption of English common law as it existed prior to April 19, 1775, *Montgomery v. Daniels*, 338 N.Y.2d 41, 57 (1975); *Jones v. People*, 79 N.Y. 45, 48 (1879); N.Y. Const. Art. I, § 14; N.Y. Const. § 35 (1777), incorporated Lord Mansfield’s common law habeas corpus ruling in *Somerset v. Stewart*. *See also Lemmon v. People*, 20 N.Y. 562 (1860).

133 A.D. 179, 187-88 (2d Dept. 1909); *People ex rel. Jenkins v. Kuhne*, 57 Misc. 30, 40 (Sup. Ct. 1907) (“A writ of habeas corpus is a common law writ and not a statutory one. If every provision of statute respecting it were repealed, it would still exist and could be enforced.”), *aff’d*, 195 N.Y. 610 (1909). See Vincent Alexander, *Practice Commentaries, Article 70 (Habeas Corpus), In General* (2013). This Court agreed that the “writ ‘is a part of the common law of this State.’” *Stanley*, 16 N.Y.S.3d at 904 (citations omitted).

In New York, the common law writ of habeas corpus “lies in all cases of imprisonment by commitment, detention, confinement or restraint, for whatever cause, or under whatever pretence.” *People v. McLeod*, 3 Hill 635, 647 note j (N.Y. 1842). Its “scope and flexibility . . . its capacity to reach all manner of illegal detention - its ability to cut through barriers of form and procedural mazes-have always been emphasized and jealously guarded by courts and lawmakers.” *Harris v. Nelson*, 394 U.S. 286, 291 (1969). See, e.g., *People ex rel. Keitt v. McCann*, 18 N.Y.2d 257, 263 (1966).

The procedure for using the common law writ of habeas corpus is set forth in Article 70, CPLR 7001-7012.⁵ However, “[t]he drafters of the CPLR made no attempt to specify the circumstances in which habeas corpus is a proper remedy. This was viewed as a matter of substantive law.” Vincent Alexander, *Practice Commentaries, Article 70 (Habeas Corpus), In General* (2013). E.g., *Koehler*, 129 A.D.2d at 30.

“Legal person” has never been a synonym for “human being.” Instead, it designates Western law’s most fundamental category by identifying those entities capable of possessing a legal right. “Legal personhood” determines who counts, who lives, who dies, who is enslaved, and who is free. Chimpanzees such as Kiko, as autonomous and self-determining beings, should be recognized as common law “persons” in New York, entitled to the common law right to bodily liberty protected by the common law of habeas corpus.

⁵ CPLR 7001 provides in part: “the provisions of this article are applicable to common law or statutory writs of habeas corpus.”

This Court noted that a chimpanzee’s right to invoke the writ of habeas corpus is best decided either by the legislature or the Court of Appeals, which is “the state’s policy-making tribunal.” *Stanley*, 16 N.Y.S.3d at 917 (citing *People v. Scott*, 79 N.Y.2d 474 (1992)).⁶ The Court in *Byrn v. New York City Health & Hosps. Corp.*, 31 N.Y.2d 194, 201 (1972), noted that the issue of who is a person usually devolves on the legislature. But this is an observation about legal history, not jurisprudence. Nothing restricts the question of who is a person to the legislature, while the specific question of who is a common law person for the purpose of the common law writ of habeas corpus is *uniquely* a question for the courts of New York. In recognition thereof, this Court cited *Tweed*, 60 N.Y. at 566, for the notion that the writ of habeas corpus is “[s]afeguarded by the United States and New York Constitutions” and “cannot be abrogated, or its efficiency curtailed, by legislative action.” *Stanley*, 16 N.Y.S.3d at 904.

Nine prominent working primatologists from around the world have submitted Expert Affidavits demonstrating that chimpanzees such as Kiko possess the autonomy and self-determination that allows them to choose how they will live their emotionally, socially, and intellectually rich lives.⁷ Five of these primatologists have also submitted Supplemental Affidavits demonstrating that chimpanzees such as Kiko possess the capacity to shoulder duties and responsibilities, as has Dr. Jane Goodall. Pursuant to a New York common law that keeps abreast of evolving standards of justice, morality, experience, and scientific discovery, New York common law liberty and equality mandate that such autonomous beings as chimpanzees be

⁶ The NhRP, of course, must begin its journey to the Court of Appeals by filing suit in the Supreme Court.

⁷ The original Expert Affidavits attached to this Second Kiko Petition are copies of the affidavits filed in the NhRP’s prior habeas corpus proceedings in the Niagara County (First Kiko Petition) and New York County Supreme Courts (Second Hercules and Leo Petition and Second Tommy Petition) and are properly before the Court. CPLR 2101(e) (“copies, rather than originals, of all papers, including orders, affidavits and exhibits may be served or filed. Where it is required that the original be served or filed and the original is lost or withheld, the court may authorize a copy to be served or filed.”). See *Rechler Eq. B-I, LLC v. AKR Corp.*, 98 A.D.3d 496, 497 (2d Dept. 2012); see also *Brooke Bond India, Ltd. v. Gel Spice Co., Inc.*, 192 A.D.2d 458, 459-60 (1st Dept. 1993); *Bd. of Educ. of City Sch. Dist. of City of New York v. Iannelli Const. Co., Inc.*, 906 N.Y.S.2d 778 (Sup. Ct. 2009); *R.M. v. Dr. R.*, 855 N.Y.S.2d 865, 866 (Sup. Ct. 2008); *Matthews v. Gilleran*, 12 N.Y.S. 74, 78 (Gen. Term. 1890); *Barnard v. Heydrick*, 1866 WL 5268 (N.Y. Sup. Ct. 1866).

recognized as common law “persons” entitled to the common law right to bodily liberty protected by the common law of habeas corpus.

The New York common law of liberty begins, as does the common law of every American state, with the premise that autonomy is a supreme common law value that trumps even the State’s interest in life itself, and is therefore protected as a fundamental right that may be vindicated through a common law writ of habeas corpus.

New York common law equality forbids discrimination founded upon unreasonable means or unjust ends, and protects Kiko’s common law right to bodily liberty free from unjust discrimination. Kiko’s common law classification as a “legal thing,” rather than “legal person,” rests upon the illegitimate end of enslaving him. Simultaneously, it classifies Kiko by the single trait of his being a chimpanzee, and then denies him the capacity to have a legal right. This discrimination is so fundamentally inequitable it violates basic common law equality. In fact, the New York legislature’s recognition that some nonhuman animals, such as chimpanzees, are capable of having personhood rights by expressly allowing them to be trust “beneficiaries” pursuant to section 7-8.1 of the Estates, Powers and Trusts Law (“EPTL”) affirms that personhood may apply to natural persons other than human beings.

The NhRP does not claim Respondents are violating any federal, state, or local animal welfare law in the manner in which they are detaining Kiko. The issue is not Kiko’s welfare, any more than the issue is the welfare of a human detained against his will in a habeas corpus case. *See Stanley*, 16 N.Y.S.3d at 901 (recognizing that the Hercules and Leo habeas corpus case was not about “animal welfare”). The issue is whether Kiko, an autonomous and self-determining being, may be detained at all.⁸

⁸ Even if Respondents were violating animal welfare statutes, habeas corpus would still be available, as the courts have made clear that alternative remedies do not alter one’s ability to bring the writ. *People v. Schildhaus*, 8 N.Y.2d 33, 36 (1960). *See also Williams v. Dir. of Long Island Home, Ltd.*, 37 A.D.2d 568, 570 (2d Dept. 1971) (“The fact that petitioner or the detainee may h[a]ve had an alternative avenue of relief by way of a statutory remedy in no way alters the right to broach the issue by way of habeas corpus.”). Further, the remedy for a violation of an animal welfare statute does not necessarily entail the release of the animal, further rendering such a statute inapposite.

In the following section, the NhRP sets out the facts that demonstrate chimpanzees such as Kiko possess the capacities for autonomy and self-determination sufficient for common law personhood and the possession of the common law right to bodily liberty protected by the common law of habeas corpus. These include possession of an autobiographical self, episodic memory, self-determination, self-consciousness, self-knowingness, self-agency, referential and intentional communication, empathy, a working memory, language, metacognition, numerosity, and material, social, and symbolic culture, their ability to plan, engage in mental time-travel, intentional action, sequential learning, mediational learning, mental state modeling, visual perspective-taking, cross-modal perception, the ability to understand cause-and-effect and the experiences of others, to imagine, imitate, engage in deferred imitation, emulate, to innovate and to use and make tools.

III. STATEMENT OF FACTS

A. CHIMPANZEE AUTONOMY

1. INTRODUCTION

Chimpanzees, like humans, are “autonomous” (Affidavit of James King (“King Aff.”), at ¶11; Affidavit of Mathias Osvath (“Osvath Aff.”), at ¶11), which Professor James King defines as freely choosing, not acting on reflex, innate behavior, or through any conventional category of learning such as conditioning, discrimination learning, or concept formation, directing behavior based on internal cognitive processes. (King Aff. at ¶11). The simplest explanation for chimpanzees’ autonomous behavior is that it is based on similar human capacities. (*Id.* at ¶12). Chimpanzees possess the “self” that is integral to autonomy, being able to have goals and desires, intentionally act towards those goals, and understand whether they are satisfied. (Affidavit of Tetsuro Matsuzawa (“Matsuzawa Aff.”), at ¶15; Affidavit of James Anderson (“Anderson Aff.”) at ¶21).

2. SIMILARITIES BETWEEN CHIMPANZEES AND HUMANS: PHYSIOLOGY, DNA, AND COGNITION

Humans and chimpanzees share almost 99% of their DNA. (Matsuzawa Aff. at ¶10; Affidavit of Emily Sue Savage-Rumbaugh (“Savage-Rumbaugh Aff.”), at ¶11). Chimpanzees are more closely related to human beings than to gorillas. (Affidavit of William McGrew (“McGrew Aff.”), ¶11; King Aff. at ¶12; Osvath Aff. at ¶11). Both the brains and behavior of humans and chimpanzees are plastic, flexible, and heavily dependent upon learning. (Savage-Rumbaugh Aff. at ¶11a). Both possess the brain asymmetry associated with sophisticated communication and language-like capacities. (Matsuzawa Aff. at ¶12). Both share similar brain circuits involved in language and communication (Matsuzawa Aff. at ¶10), and have evolved the large frontal lobes involved in insight and foreplanning. (*Id.*). Broca’s Area and Wernicke’s Area, which enable human symbolic communication, have corresponding areas in chimpanzee brains. (Savage-Rumbaugh Aff. at ¶13).

Both share cell types involved in higher-order thinking, and functional characteristics related to sense of self. (Matsuzawa Aff. at ¶10; Affidavit of Jennifer M.B. Fugate (“Fugate Aff.”), at ¶14). Both brains possess spindle cells (or von Economo neurons) in the anterior cingulate cortex, involved in emotional learning, the processing of complex social information, decision-making, awareness, and, in humans, speech initiation. (Matsuzawa Aff. at ¶14). This strongly suggests they share many higher-order brain functions. (*Id.*). The chimpanzee brain is activated in the same areas and networks as the human brain during activities associated with planning, foresight, episodic memory, and memories of autobiographical events. (Osvath Aff. at ¶12, ¶¶15-16).

That their brains develop and mature in similar ways indicates that humans and chimpanzees pass through similar cognitive developmental stages. (Matsuzawa Aff. at ¶10). Brain developmental delay, which plays a role in the emergence of complex cognitive abilities, such as self-awareness, creativity, foreplanning, working memory, decision-making and social interaction, is a key feature of both chimpanzee and human prefrontal cortex brain evolution.

(Matsuzawa Aff. at ¶11; Savage-Rumbaugh Aff. at ¶11a, ¶12). Chimpanzee development of the use and understanding of sign language, along with their natural communicative gestures and vocalizations, parallels the development of language in children; this points to deep similarities in the cognitive processes that underlie communication in both species. (Affidavit of Mary Lee Jensvold (“Jensvold Aff”) Aff. at ¶9). Both develop increasing levels of consciousness, awareness, and self-understanding throughout adulthood, through culture and learning. (Savage-Rumbaugh Aff. at ¶11d).

Numerous parallels in the way their communication skills develop suggest a similar unfolding of cognitive processes and an underlying neurobiological continuity. (Jensvold Aff. at ¶10). The foundational stages of communication suggest striking similarities between human and chimpanzee cognition. (*Id.* at ¶¶10-11). Chimpanzees show some of the same early developmental tendencies and changes in their communication skills as children. (*Id.* at ¶10). Children and language-trained chimpanzees begin communicating using natural gestures before moving to more frequent use of symbols. (*Id.*). In both, the ratio of symbol to gestures increases with age, with the overwhelming majority of gestures serving a communicative purpose. (*Id.*). Both show a primacy of natural gestures in development over learning a symbolic system of communication. (*Id.* at ¶¶9-10).

3. SIMILARITIES BETWEEN CHIMPANZEES AND HUMANS: BEHAVIOR, MENTAL AND EMOTIONAL PROCESSES

The close evolutionary relationship between chimpanzees (and the closely related bonobos) and humans is evident not only in terms of physical structure but also in behaviour, emotional and mental processes. (Supplemental Affidavit of James Anderson (“Anderson Supp. Aff.”) at ¶14). Chimpanzees were the first nonhuman species shown to be capable of mirror-mediated self-recognition. (Anderson Supp. Aff. at ¶14). The developmental emergence of self-recognition in chimpanzees is similar to that in humans. (*Id.*). Furthermore, as in humans, self-recognition in adult chimpanzees is highly stable across time, with some decline in old age. (*Id.*).

a. Self-recognition and self-awareness

Chimpanzees and bonobos demonstrate they can step outside of themselves and look upon themselves apart from the actions in which they are engaging. (Supplemental Affidavit of Emily Sue Savage-Rumbaugh (“Savage-Rumbaugh Supp. Aff.”), at ¶16). They recognize their shadows; they recognize themselves in mirrors; they apply bodily decorations, they intend beyond the immediacy of the current social situations in which they are engaged; they signal intent by means other than through the use of incipient actions; and they prevent their offspring from engaging in behaviors that could be dangerous. (*Id.*).

That chimpanzees recognize themselves in mirrors (*id.* at ¶16) is a marker of self-awareness. (Anderson Aff. at ¶12; Savage-Rumbaugh Aff. at ¶16). They recognize themselves on television, in videos and photographs, and examine the interior of their mouths with flashlights. (Savage-Rumbaugh Aff. at ¶16). They recognize pictures of themselves, and others, when they were very young. (*Id.*). Self-recognition requires that one hold a mental representation of what one looks like from another perspective. (Anderson Aff. at ¶12). This capacity to reflect upon one’s behavior allows one to become the object of one’s own thought. (Savage-Rumbaugh Aff. at ¶16). Chimpanzees show such capacities that stem from self-awareness, as self-monitoring, self-reflection, and metacognition. (*Id.* at ¶15). They are aware of what they know and do not know. (*Id.*). “Self-agency,” a fundamental component of autonomy, allows one to distinguish one’s own actions and effects from external events. (Matsuzawa Aff. at ¶16). Both chimpanzees and humans share the fundamental cognitive processes underlying the sense of being an independent agent. (Matsuzawa Aff. at ¶16; Savage-Rumbaugh Aff. at ¶11e).

b. Self-control and episodic memory

Similar brain structures of humans and chimpanzees support the behavioral and cognitive evidence for both human and chimpanzee autobiographical selves. (Osvath Aff. at ¶15). Both are aware of their past and envision their future. (*Id.* at ¶16). Both share the sophisticated cognitive capacity necessary for the “mental time travel” the episodic system enables. (Osvath Aff. at ¶10, ¶12, ¶15; Jensvold Aff. at ¶10). Without understanding one is an individual who exists through

time, one cannot recollect past events in one's life and plan future events. (Osvath Aff. at ¶12). Autonoetic, or self-knowing, consciousness allows an autobiographical sense of a self with a past and future. (*Id.*).

Chimpanzees delay a strong current drive for a better future reward, generalize a novel tool for future use, and select objects for a much-delayed future task. (*Id.* at ¶14). They can remember the “what, where and when” of events years later. (*Id.* at ¶12). They can prepare themselves for such a future action as tool use a day in advance. (*Id.*). Wild chimpanzees demonstrate such long-term planning for tool use as transporting stones to locations to be later used later as hammers to crack nuts; a captive chimpanzee routinely collected, stockpiled, and concealed stones he would later hurl at visitors when he was agitated. (Osvath Aff. at ¶13; Anderson Aff. at ¶16). This ability to mentally construct a new situation to alter the future (in this case the behaviors of human zoo visitors) and plan for events where one is in a different psychological state signals the presence of an episodic system. (Osvath Aff. at ¶13).

Autonomous individuals possess a self-control that depends upon the episodic system. (*Id.* at ¶14). Chimpanzees, like humans, delay gratification for a future reward, indeed possess a high level of self-control under many circumstances. (*Id.*). Chimpanzees plan for future exchanges with humans. (*Id.*). They may use self-distraction (playing with toys) to cope with the impulse of grabbing immediate candies instead of waiting for more. (*Id.*).

Perceptual simulations enabled by episodic memory bring the future into the present by braking current drives in favor of delayed rewards, and is available only those who a sufficiently sophisticated sense of self and autobiographical memory. (*Id.*). Chimpanzees can disregard a small piece of food in favor of a tool that will allow them to obtain a larger piece of food later. (*Id.*). They can select a tool they have never seen, guess its function, and use it appropriately. (*Id.*). This would be impossible without being able to mentally represent the future event. (*Id.*).

Chimpanzees re-experience and anticipate pains and pleasures. (*Id.* at ¶16). Like humans, they experience pain around an anticipated future event. (*Id.*). Confining someone in a prison or cage loses its power as punishment if the individual had no self-concept, as each moment will be

a new with no conscious relation to any other. (*Id.*). As chimpanzees conceive a personal past and future, and suffer the pain of being unable to fulfill their goals or move about as they wish, like humans they experience the pain of anticipating a never-ending situation. (*Id.*).

c. Language, communication, and intention

Language, a volitional process that involves creating intentional sounds for the purpose of communication, reflects autonomous thinking and behavior. (Matsuzawa Aff. at ¶13). Chimpanzees exhibit referential and intentional communication. (Anderson Aff. at ¶15). They produce sounds to capture the attention of an inattentive audience. (*Id.*). The development of their use and understanding of sign language, along with their natural communicative gestures and vocalizations, parallels the development of language in children, which points to deep similarities in the cognitive processes that underlie communication in both. (Jensvold Aff. at ¶9). They point and vocalize when they want another to notice something and adjust their gesturing to insure they are noticed. (*Id.*). They intentionally and purposefully inform naïve chimpanzees about something. (*Id.*).

Chimpanzees demonstrate purposeful communication, conversation, understanding of symbols, perspective-taking, imagination, and humor. (Jensvold Aff. at ¶9; Savage-Rumbaugh Aff. at ¶¶14-15). They learn, and remember for decades, symbols for hundreds of items, events and locations; they learn new symbols just by observing others using them. (Savage-Rumbaugh Aff. at ¶20). They master syntax. (*Id.*). They understand such “if/then” clauses as, “if you share your cereal with Sherman, you can have some more.” (*Id.* at ¶21). They announce important social events, what they are about to do, where they are going, what assistance they want from others, and how they feel. (*Id.* at ¶25). They announce what they are going to retrieve from an array of objects they’ve seen in another room. (*Id.*). They recount what happened yesterday. (*Id.* at ¶27).

There is no essential difference between what words chimpanzees learn mean to them, and what words humans learn mean to them. (Savage-Rumbaugh Aff. at ¶20). They understand there is no one-to-one relationship between utterances and events, that there are infinite linguistic

ways of communicating the same or similar things. (*Id.* at ¶22). They use symbols to comment about other individuals as well as about past and future events. (Jensvold Aff. at ¶10). They purposefully create declarative sentences and combine gestures with pointing to refer to objects. (*Id.*).

Language-trained chimpanzees spontaneously use language to communicate with each other. (Jensvold Aff. at ¶12; Savage-Rumbaugh Aff. at ¶15). Those who understand spoken English answer “yes/no” questions about their thoughts, plans, feelings, intentions, dislikes, and likes. (Savage-Rumbaugh Aff. at ¶15). They answer questions about their companions’ likes and dislikes and tell researchers what other apes want. (*Id.*). They use symbols to express themselves and to state what they are going to do, in advance of acting, then carry out their action. (*Id.* at ¶17). An example is statements made by two language-trained chimpanzees trained with abstract computer symbols, Sherman and Austin, who told each other the foods they intended to share, and told experimenters which items they were going to give to them. (*Id.*). With the emergence of the ability to state their intentions, Sherman and Austin revealed that, not only did they recognize and understand differential knowledge states between themselves, but language allows beings to bring their different knowledge states into accord with their imminent intentions and to coordinate their actions. (*Id.* at ¶¶18-19).

Sherman and Austin would state “Go outdoors,” then head for the door, or “Apple refrigerator,” then take an apple from the refrigerator (rather than any of the other foods in the refrigerator). (*Id.* at ¶18). To produce statements about intended actions for the purpose of coordinating future actions with others, one must be able to form a thought and hold it until agreement is reached between two parties. (*Id.* at ¶20).

The chimpanzee Loulis was not raised with humans and was not taught American Sign Language (“ASL”) by humans. (Jensvold Aff. at ¶12). Nor did humans use ASL in his presence. (*Id.*). But he was the adopted son of Washoe, a signing chimpanzee. Loulis acquired signs from observing Washoe and other signing chimpanzees, as well as when Washoe molded his hands into the appropriate signs. (*Id.*). Not only did Washoe’s behavior toward Loulis show she was

aware of his shortcomings in the use of signs as a communication skill, but she took steps to change that situation. (*Id.*).

True communication is based on conversational interaction in which the participants takes turns communicating in a give-and-take manner and respond appropriately to the other's communicative actions. (*Id.* at ¶11). When a conversation becomes confusing, participants make such contingent adjustments as offering a revised or alternative utterance/gesture or repeating a gesture or sign to continue the conversation. (*Id.*). ASL-using chimpanzees demonstrate contingent communication with humans at the same level as young human children. (*Id.*).

When a human conversation has broken down, they repeat their utterance and add information. (*Id.*). Chimpanzees conversing in sign language with humans respond in the same way, reiterating, adjusting, and shifting their signs to create conversationally appropriate rejoinders; their reactions to and interactions with a conversational partner resemble patterns of conversation found in studies of human children. (*Id.*). When their request is satisfied, they cease signing it. (*Id.*). When their request is misunderstood, refused or not acknowledged, they repeat and revise their signing until they get a satisfactory response. (*Id.*). As in humans, this pattern of contingency in conversation demonstrates volitional and purposeful communication and thought. (*Id.*).

Chimpanzees understand that conversation involves turn-taking and mutual attention and will try to alter the attentional state of the human. (*Id.*). If they wish to communicate with a human whose back is turned to them they will make attention-getting sounds. (*Id.*). If the human is turned to them, they switch to conversational sign language with few sounds. (*Id.*).

Both language-using and wild chimpanzees understand conversational give-and-take and adjust their communication to the attentional state of the other participant, using visual gestures towards an attentive partner and tactile and auditory gestures more often toward inattentive partners. If the partner does not respond, they repeat the gesture. (*Id.*). Even wild and captive chimpanzees untutored in ASL string together multiple gestures to create gesture sequences, and

combine gestures into long series, within which gestures may overlap, interspersed with bouts of response waiting or be exchanged back and forth between individuals. (*Id.*).

When Sherman and Austin communicated, they paid close attention to the other's visual regard. (Savage-Rumbaugh Aff. at ¶22). If Austin was looking away when Sherman selected a symbol, Sherman would wait until Austin looked back. Then he would point to the symbol he used. If Austin hesitated, Sherman would point to the food the symbol symbolized. If Austin's attention wandered further, Sherman would turn Austin's head toward the keyboard. If Sherman was not attending to Austin's request, Austin would gaze at the symbol until Sherman took note. (*Id.*). Both recognized the speaker had to monitor the listener, watch what he was doing, make judgments about his state of comprehension, and decide how to proceed with conversational repair. (*Id.*).

In a manner similar to two-through-seven year olds, sign-language trained chimpanzees and chimpanzees trained to use arbitrary computer symbols to communicate, sign among themselves and exhibit a telltale sign of volitional use of language, signing to themselves or "private speech." (Jensvold Aff. at ¶12; Savage-Rumbaugh Aff. at ¶14). Private speech has many functions, including self-guidance, self-regulation of behavior, planning, pacing, and monitoring skill, and is a part of normal development of communication. (Jensvold Aff. at ¶13). Children use private speech during creative and imaginative play, often talking to themselves when playing imaginative and pretend games. (*Id.* at ¶14). The more frequently children engage in private speech, the more creative, flexible, and original thought they display. (*Id.*).

d. Imagination and humor

Imagination is a key component of mental representation, metacognition, and the ability to mentally create other realities. (*Id.* at ¶15). Both captive and wild chimpanzees engage in at least six forms of imaginary play that are similar to the imaginary play of children ages two through six. (*Id.*). These include Animation, Substitution, and imaginary private signing (*Id.*). Animation is pretending that an inanimate object is alive, such as talking to a teddy bear; substitution is pretending an object has a new identity, such as placing a block on the head as a

hat. (*Id.*). In imaginary private signing, chimpanzees transform a sign or its referent to a different meaning, whether it is present or not. (*Id.* at ¶14). An example is placing a wooden block on one's head and referring to it as a hat (*Id.*). Chimpanzees use imagination to engage in pretend-aggression. (Savage-Rumbaugh Aff. at ¶31). Sherman pretended that a King Kong doll was biting his fingers and toes and would pretend to be in pain, when he poked a needle in his skin and out the other side, being careful to just pierce the thick outer layer of skin. (*Id.*).

Deception and imaginary play require behaviors directed toward something that is not there and often involve modeling mental states. (Jensvold Aff. at ¶16). They are closely related and by age three chimpanzees engage in both. (*Id.* at ¶15; Savage-Rumbaugh Aff. at ¶16). For example, a chimpanzee who cached stones to later throw at zoo visitors engaged in deception by constructing hiding places for his stone caches, then inhibiting those aggressive displays that signal upcoming throws. (Osvath Aff. at ¶13).

Chimpanzees display a sense of humor, and laugh under many of the same circumstances in which humans laugh. (Jensvold Aff. at ¶17).

Together these findings provide evidence for cognitive similarities between humans and chimpanzees in the domains of mental representation, intentionality, imagination, and mental state modeling – all fundamental components of autonomy. (*Id.*).

e. Theory of mind

Chimpanzees are attuned to the experiences, visual perspectives, knowledge states, emotional expressions and states of others. (Anderson Aff. at ¶15; Fugate Aff. at ¶16; Matsuzawa Aff. at ¶¶17-18). They possess mirror neurons, which allow them to share and relate to another's emotional state. (Fugate Aff. at ¶14). These specialized cells respond to actions performed by oneself, but also when one watches the same action performed by another, which forms the basis for empathy, the ability to put oneself in another's situation. (Fugate Aff. at ¶14; Matsuzawa Aff. at ¶17). They have some theory of mind; they know they have minds, they know humans have minds, thoughts, intentions, feelings, needs, desires, and intentions, and they know these other minds and state of knowledge differ from what their minds know. (Savage-

Rumbaugh Aff. at ¶32). They know when another chimpanzee does not know something and inform the other about facts he does not know. (*Id.*).

Chimpanzees observing another trying to complete a task anticipate their intentions. (Matsuzawa Aff. at ¶17). They know what others can and cannot see. (*Id.*). They know when another's behavior is accidental or intentional. (*Id.*). They use their knowledge of others' perceptions to deceive them. (*Id.*). In situations where two chimpanzees are competing for hidden food, they employ strategies and counter-strategies to throw each other off the trail and obtain the food for themselves. (*Id.*). When placed in a situation where they must compete for food placed at various locations around visual barriers, subordinate chimpanzees only approach food they infer dominant chimpanzees cannot see. (Anderson Aff. at ¶15). They can take the visual perspective of a chimpanzee competitor, and understand that what they see is not the same thing their competitor sees. (*Id.*). When ASL-trained and wild chimpanzees adjust their gestures and gestural sequences to the attention state of the individual they are trying to communicate with, using visual gestures towards an attentive partner and tactile and auditory gestures more often toward inattentive partners. If the partner does not respond, they repeat the gesture, demonstrating visual perspective-taking and mental state modeling. (Jensvold Aff. at ¶11).

f. Empathy

The capacity for self-recognition has been linked to empathy, which is the identifying with, and understanding of, another's situation, feelings and motives. Several lines of evidence indicate chimpanzees possess highly developed empathic abilities. (Anderson Aff. at ¶13; Anderson Supp. Aff. at ¶15).

When tested in similar experimental situations using video stimuli, chimpanzees show contagious yawning in much the same way as humans do. (Anderson Aff. at ¶18; Matsuzawa Aff. at ¶18). That chimpanzees yawn more frequently in response to seeing familiar individuals yawning compared to unfamiliar others supports a link between contagious yawning and empathy. (*Id.*). Chimpanzees shown videos of other chimpanzees yawning or displaying open-mouth facial expressions that were not yawns showed higher levels of yawning in response to the

yawn videos, but not to the open-mouth displays. (Matsuzawa Aff. at ¶18). These findings are similar to contagious yawning effects observed in humans, and are based on the capacity for empathy. (*Id.*).

In the wild and in captivity, chimpanzees engage in sophisticated tactical deception that requires attributing mental states and motives to others. (Anderson Aff. at ¶14). This is shown when individuals console an unrelated victim of aggression by a third-party. (*Id.*). They show concern for others in risky situations. When a chimpanzee group crosses a road, the more capable adult males will investigate the situation before more vulnerable group-members cross, and take up positions at the front and rear of the procession. (*Id.*). Knowledge of one's own and others' capabilities is probably at the origin of some instances of division of labor. (*Id.*). This includes sex differences in cooperative hunting for live prey, and crop-raiding; these activities often lead to individuals in possession of food sharing it with those who do not. (*Id.*).

g. Awareness of death

One consequence of self-awareness may be awareness of death. Chimpanzees demonstrate compassion, bereavement-induced depression, and an understanding of the distinction between living and non-living, in a manner similar to humans when a close relative passes away, which strongly suggests that chimpanzees, like humans, feel grief and compassion when dealing with mortality. (Anderson Aff. at ¶19).

h. Tool-making and chimpanzee culture

An important indicator of intelligence is the capacity for tool-making and use. (McGrew Aff. at ¶¶14-15). Tool-making implies complex problem-solving skills and evidences understanding of means-ends relations and causation, for it requires making choices, often in a specific sequence, towards a goal, which is a key aspect of intentional action. (McGrew Aff. at ¶15; Fugate Aff. at 17).

Wild chimpanzees make and use tools of vegetation and stone for hunting, gathering, fighting, play, communication, courtship, hygiene, and socializing. (McGrew Aff. at ¶15). Chimpanzees make and use complex tools that require them to utilize two or more objects

towards a goal. (*Id.* at ¶16). They make compound tools by combining two or more components into a single unit (*Id.*). They make adjustments to attain their goal. (*Id.*).

Chimpanzees use “tool sets,” two or more tools in an obligate sequence to achieve a goal, such as a set of five objects – pounder, perforator, enlarger, collector, and swab – to obtain honey. (*Id.* at ¶17). Such sophisticated tool-use involves choosing appropriate objects in a complex sequence to obtain a goal they keep in mind throughout the process. (*Id.*). This sequencing and mental representation is a hallmark of intentionality and self-regulation. (*Id.*).

Chimpanzees have taken tool-making and use into the cultural realm (*Id.*). Culture is normative (represents something most individuals do), collective (characteristic of a group or community), and socially-learned behavior (learned by watching others). (*Id.* at ¶18). It is transmitted by social and observational learning (learning by watching others), which characterizes a group or population. (*Id.*). Culture is based on several high-level cognitive capacities, including imitation (directly mimicking bodily actions), emulation (learning the results of another’s actions, then achieving those results in another way), and innovation (producing novel ways to do things and combining known elements in new ways), all of which chimpanzees share. (*Id.*). Under natural conditions, different chimpanzee cultures construct different rule-based social structures which they pass from one generation to the next. (McGrew Aff. at ¶19; Savage-Rumbaugh Aff. at ¶11f).

Three general cultural domains are found in humans and chimpanzees: 1) material culture, the use of one or more physical objects as a means to achieve an end, 2) social culture, behaviors that allow individuals to develop and benefit from social living, and 3) symbolic culture, communicative gestures and vocalizations which are arbitrarily, that is symbolically, associated with intentions and behaviors. (*Id.*).

Each wild chimpanzee cultural group makes and uses a unique “tool kit,” which indicates that chimpanzees form mental representations of a sequence of acts aimed at achieving a goal. (McGrew Aff. at ¶20; Anderson Aff. at ¶16). A chimpanzee tool kit is a unique set of about twenty different tools, often used in a specific sequence for foraging and processing food,

making comfortable and secure sleeping nests in trees, and personal hygiene and comfort. (*Id.*). These “tool kits” vary across groups, are passed on by observing others using them, and found from savannah to rainforest. (McGrew Aff. at ¶20).

Tool-making is neither genetically determined, fixed, “hard-wired,” nor simple reflex. (*Id.*). It depends on the mental abilities that underlie human culture, learning from others and deciding how to do things. Each chimpanzee group develops its own culture through its own behavioural choices. (*Id.*). At least forty chimpanzee cultures across Africa use combinations of over 65 identifiable behaviors. (*Id.*).

Organic chimpanzee tool kits are not preserved in the archaeological record. But chimpanzee, like human, stone tools are. (*Id.* at ¶21). The foraging tool kits of some chimpanzee populations are indistinguishable in complexity from the tools kits of some of the simplest human material cultures, such as Tasmanian aborigines, and the oldest known human artefacts, such as the East African Oldowan Industry. (*Id.*). Chimpanzee stone artefacts excavated in West Africa demonstrate there was once a chimpanzee “Stone Age,” just as there was a human “Stone Age,” that is at least 4,300 years old. This predates settled farming villages and Iron Age technology in West Africa. (*Id.*). In one chimpanzee population, chimpanzee tool-making culture has been passed down for 225 generations. (*Id.*). With respect to social culture, chimpanzees pass widely variable social displays and social customs from one generation to the next. (*Id.* at ¶22; for examples, see *id.*). Wild chimpanzees demonstrate symbolic element key to human. (*Id.* at ¶23). Thus, in one chimpanzee group, arbitrary symbolic gestures communicate desire to have sex, in another group an entirely different symbolic gesture expresses the same sentiment. (*Id.*).

i. Imitation and emulation

Human and chimpanzee cultures are underwritten by a common set of mental abilities. (*Id.* at ¶24). The most important are imitation and emulation. Learning by observation is key to both (*Id.*). Chimpanzees copy methods used by others to manipulate objects and use both direct imitation and emulation, depending on the circumstance. (*Id.*). Imitation, which involves copying bodily actions, is a hallmark of self-awareness, as it suggests the individual has a sense of his

own body and how it corresponds to another's body, and can manipulate his body in accordance with the other's actions. (*Id.*). Chimpanzees precisely mimic the actions of others, even the correct sequence of actions to achieve a goal. (McGrew Aff. at ¶24; Anderson Aff. ¶17).

Chimpanzee and human infants selectively imitate facial expressions. (Anderson Aff. at ¶17). Chimpanzees directly imitate another's way to achieve a goal when they have not figured out their own way to achieve that same goal. (McGrew Aff. at ¶24; Anderson Aff. ¶17). When chimpanzees have the skills to complete a task they tend to emulate, not imitate. (McGrew Aff. at ¶24). These findings demonstrate that chimpanzees make choices about whether to directly copy someone else's actions based on whether they think they can figure out how to do the task themselves. (*Id.*).

Chimpanzees know when they are being imitated, and respond as human toddlers do. (*Id.*). Both "test out" the behavior of the imitator by making repetitive actions and looking to see if the imitator follows. (*Id.*). This is similar to how chimpanzees and toddlers test whether an image in a mirror is herself. (*Id.*). Called "contingency checking," this is another hallmark of self-awareness. (*Id.*). Chimpanzees engage in "deferred imitation," copying actions they have seen in the past. (McGrew Aff. at ¶24; Anderson Aff. at ¶17). Deferred imitation relies upon more sophisticated capacities than direct imitation, as chimpanzees must remember the actions of another, while replicating them in real time. (McGrew Aff. at ¶24).

These capacities for imitation and emulation are necessary for "cumulative cultural evolution." (McGrew Aff. at ¶25; Anderson Aff. at ¶17). This cultural capacity, found in humans and chimpanzees, involves the ability to build upon previous customs. (McGrew Aff. at ¶25). Chimpanzees, like humans, tend to be social conformists, which allows them to maintain customs within groups. (*Id.*). The evidence suggests a similarity between the mental capacities of humans and chimpanzees in the areas of observational learning, imitation (and thus self-awareness), decision-making, memory and innovation. (*Id.*).

4. SIMILARITIES BETWEEN HUMANS AND CHIMPANZEES: NUMEROSITY, SEQUENTIAL LEARNING AND MEMORY

Numerosity, the ability to understand numbers as a sequence of quantities, requires both sophisticated working memory (in order to keep numbers in mind), and conceptual understanding of a sequence. (Matsuzawa Aff. at ¶19). This is closely related to “mental time travel” and planning the right sequence of steps towards a goal, two critical components of autonomy. (*Id.*). Chimpanzees have a conscious awareness of numerosity, which gives them a grasp of numbers to twelve or more without actually counting. (Savage-Rumbaugh Supp. Aff. at ¶19n). Not only do chimpanzees excel at understanding sequences of numbers, they understand that Arabic symbols (“2”, “5”, etc.) represent discrete quantities. (Matsuzawa Aff. at ¶19).

Sequential learning is the ability to encode and represent the order of discrete items occurring in a sequence. (*Id.*). It is critical for human speech and language processing, learning action sequences, and any task that requires placing items in an ordered sequence. (*Id.*). Chimpanzees count, sum arrays of real objects or Arabic numerals, and display ordinality and transitivity (if $A = B$ and $B = C$, then $A = C$) when engaged in numerical tasks, demonstrating they understand the ordinal nature of numbers. (*Id.*). Chimpanzees understand proportions (e.g., $1/2$, $3/4$, etc.). (*Id.*). They can name the number, color, and type of object shown on a screen (*Id.*). They use a touch screen to count from 0 to 9 in sequence. (*Id.*). They understand the concept of zero, using it appropriately in ordinal context. (*Id.*). They count to twenty-one. (Savage-Rumbaugh Aff. at ¶29). They display “indicating acts” (pointing, touching, rearranging) similar to what human children display when counting a sum. (Matsuzawa Aff. at ¶19). Both chimpanzees and children touch each item when counting an array of items, suggesting further similarity in the way both conceptualize numbers and sequences. (*Id.* at ¶20).

Chimpanzees have excellent working, or short-term, memory. (*Id.*). Working memory is the ability to temporarily store, manipulate, and recall items (numbers, objects, names, etc.). (*Id.*). It deals with how good someone is at keeping several items in mind simultaneously. (*Id.*). Working memory tasks require monitoring (manipulation of information or behaviors) as part of

completing goal-directed actions in the setting of interfering processes and distractions. (*Id.*). The cognitive processes needed to achieve this include attention and executive control (reasoning, planning and execution). (*Id.*). When chimpanzees are shown the numerals 1-9 spread randomly across a computer screen (*id.*), the numbers appearing for just 210, 430, and 650 milliseconds, then replaced by white squares, they touch them in the correct order (1-9). (*Id.*). In another version of the task, as soon as chimpanzees touched the number 1, the remaining numbers were immediately masked by white squares. (*Id.*). They had to remember the location of each concealed number and touch them in the correct order. (*Id.*). The performance of a number of the chimpanzees on these seemingly impossible memory tasks was not only accurate, but better than human adults. (*Id.*). Chimpanzees have an extraordinary working memory capability for numerical recollection, better than adult humans, which underlies a number of mental skills related to mental representation, attention, and sequencing. (*Id.*).⁹

Chimpanzees are competent at “cross-modal perceptions.” They obtain information in one modality such as vision or hearing, and internally translate it to information in another modality. (Savage-Rumbaugh Aff. at ¶26). They match an audio or video vocalization recording of a familiar chimpanzee or human to her photograph. (Fugate Aff. at ¶16). They translate symbolically encoded information and into any non-symbolic mode. (Savage-Rumbaugh Aff. at ¶26). When shown an object’s picture, they retrieve it by touch, and retrieve a correct object by touch when shown its symbol. (*Id.*).

B. CHIMPANZEES SHOULDER DUTIES AND RESPONSIBILITIES BOTH WITHIN CHIMPANZEE SOCIETIES AND WITHIN CHIMPANZEE/HUMAN SOCIETIES.

1. INTRODUCTION

Chimpanzees shoulder well-defined duties and responsibilities both within their own societies and within human/chimpanzee societies. (Goodall Aff. at ¶14-¶15; Supplemental Affidavit of William McGrew (“McGrew Supp. Aff.”), at ¶13; Supplemental Affidavit of

⁹ These remarkable similarities between humans and chimpanzees are not limited to autonomy, but extend to personality and emotion. (King Aff. at ¶¶12-28).

Christophe Boesch (“Boesch Supp. Aff.”), at ¶14; Supplemental Affidavit of Mary Lee Jensvold (“Jensvold Supp. Aff.”), at ¶10; Savage-Rumbaugh Supp. Aff. at ¶¶13-14; Anderson Supp. Aff. at ¶16, ¶24).¹⁰ Chimpanzees understand and carry out duties and responsibilities while knowingly assuming obligations then honouring them. (McGrew Supp. Aff. at ¶27; Savage-Rumbaugh Supp. Aff. at ¶¶13-14, ¶19d-e). Chimpanzees have duties to each other and behave in ways that seem both lawful and rule-governed. (McGrew Supp. Aff. at ¶23; Goodall Aff. at ¶23; Boesch Supp. Aff. at ¶20; Savage-Rumbaugh Supp. Aff. at ¶19, ¶¶22-23; Jensvold Supp. Aff. at ¶15; Anderson Supp. Aff. at ¶15). Both ape and human adult members of chimpanzee/human societies constantly behave in morally responsible ways as they understand them. (Savage-Rumbaugh Supp. Aff. at ¶14, ¶19r, ¶29; Anderson Supp. Aff. at ¶20). Chimpanzees have moral inclinations and a level of moral agency. (McGrew Aff. at ¶26). They ostracize individuals who violate social norms. (*Id.*). They respond negatively to inequitable situations, e.g. when offered lower rewards than companions receiving higher ones, for the same task. (*Id.*). When given a chance to play such economic games as the Ultimatum Game, they spontaneously make fair offers, even when not obliged to do so. (*Id.*).

Chimpanzee social life is cooperative and represents a purposeful and well-coordinated social system. (*Id.* at ¶27). They engage in collaborative hunting, in which hunters adopt different roles that increase the chances of success. (*Id.*). They share meat from prey. (*Id.*). Males cooperate in territorial defense, and engage in risky boundary patrolling. (*Id.*; Anderson Supp. Aff. at ¶16).

Chimpanzees and bonobos who acquire language are often asked to carry out duties and responsibilities, and succeed. (Savage-Rumbaugh Supp. Aff. at ¶13). They routinely enter into contractual agreements. (*Id.* at ¶13, ¶19, ¶25). They show concern for others’ welfare, and they

¹⁰ Among its various definitions for ‘duty’, the *Oxford English Dictionary* gives “behaviour due to a superior”, “deference”, “obligation”, and “the binding force of what is morally right.” Similarly, for ‘responsibility’, the *OED* gives “a charge, trust, or duty, for which one is responsible.” (McGrew Supp. Aff. at ¶12). It defines “responsible” as “accountable for one’s actions”, “having authority or control”, and “capable of rational conduct ... of fulfilling an obligation or trust.” (*Id.*).

have expectations about appropriate behaviour in a range of situations, i.e. social norms. (Anderson Supp. Aff. at ¶24). Such behaviour is essential for the maintenance of chimpanzee society, and it can be extended to human beings when necessary. (McGrew Supp. Aff. at ¶27; Goodall Aff. at ¶24; Savage-Rumbaugh Supp. Aff. at ¶13, ¶19c, ¶20, ¶22; Anderson Supp. Aff. at ¶24). No bonobo or chimpanzee group could survive in the wild if its members failed to carry out their assigned duties and responsibilities to the group. (Savage-Rumbaugh Supp. Aff. at ¶37). They would cease to locate sufficient food, their youngsters would become easy prey, or they would have to try to make it on their own, which would be dangerous. (*Id.*).

2. CHIMPANZEES ROUTINELY SHOULDER DUTIES AND RESPONSIBILITIES WITHIN WILD CHIMPANZEE SOCIETIES.

a. Familial duties and responsibilities

1) **Maternal duties**

Chimpanzee mothers show a “duty of care” to their offspring that rivals that of humans. (McGrew Supp. Aff. at ¶14). Their maternal behavior is a clear indicator of responsibility. (Jensvold Supp. Aff. at ¶14; McGrew Supp. Aff. at ¶14; Goodall Aff. at ¶15; Boesch Supp. Aff. at ¶21).

The duties and responsibilities of a mother towards her offspring are many and often onerous. (Goodall Aff. at ¶15; McGrew Supp. Aff. at ¶14). As single mothers, they feed, protect, carry, shelter, and train their infants, for an average of five and a half years, from birth until weaning. (McGrew Supp. Aff. at ¶14). Without this succour, infant chimpanzees die (unless adopted). (*Id.*). For three years the infant is dependent on breast milk, and continues to suckle though less often for the next two years until the next baby is born. (Goodall Aff. at ¶15). Throughout this period the mother continues to carry the infant, at first clinging to her belly and then riding on her back. (*Id.*). During this time the mother waits for the child before moving off. (*Id.*). She constructs a nest large enough for herself and her child until the next baby is born. (*Id.*).

The mother's duties and responsibilities do not end when a new infant is born. (Goodall Aff. at ¶¶16-18; McGrew Supp. Aff. at ¶¶14-15). After weaning, chimpanzee mothers continue to groom, support and cooperate with their offspring for the rest of their lives, even into the adulthood of their offspring and the old age of the mothers. (McGrew Supp. Aff. at ¶14).

For the next couple years she waits for the older child before moving from one place to another. (Goodall Aff. at ¶16). When the older child is male, he is often anxious to join groups of adult males, particularly when there is a lot of excitement. (*Id.*). Mothers with small infants often prefer to avoid such groups. (*Id.*). Sometimes a mother, after setting off in her chosen direction, stops when her young son whimpers and refuses to follow, going some distance towards the males. (*Id.*). Each time she moves, he cries louder. (*Id.*). Some mothers then give in, and join the males in order to provide support for their sons. (*Id.*).

Chimpanzee mothers may continue this care, even after the death of an infant. (McGrew Supp. Aff. at ¶15). They may carry and safeguard the infant's corpse for days, or even weeks, until it has perished to the point of disintegration. (*Id.*). Moreover, young female chimpanzees practice their future maternal behaviour by using sticks as 'dolls', while young males do not, in a form of symbolic play. (*Id.*).

An important component of maternal responsibility is to provide support for her child. (Goodall Aff. at ¶17). During a play session her infant sometimes gets hurt and screams – the mother will hasten to support her child, reprimanding the rough playmate even though this may entail retaliation from a more dominant mother. (*Id.*). There have been many instances when mothers have gone to help their fully-grown offspring. (*Id.*).

2) Paternal duties

Chimpanzee paternity can be determined from DNA profiling of fecal samples but, as a female may be mated by most or all males during periods of receptivity, it seems unlikely that a male recognizes his own biological offspring. (Goodall Aff. at ¶19). Most adult males of a community act in a paternal way to all infants in their community, rushing to their aid when necessary. (*Id.*). On one occasion two hunters (human) shot a female chimpanzee, seized her

infant, and tried to push it into a sack. (*Id.*) As the infant screamed, a male chimpanzee rushed out of the forest, attacked the two men, grabbed the baby, and disappeared into the forest. Both hunters ended up in the hospital. (*Id.*) There are many other tales of adult males protecting – or trying to protect – infants from hunters across Africa. Tragically they often get killed themselves. (*Id.*)

3) Sibling duties

Such familial duties are not restricted just to mothers and fathers, however. (McGrew Supp. Aff. at ¶16; Goodall Aff. at ¶20). Juveniles and adolescents very frequently act responsibly towards their infant siblings. (Goodall Aff. at ¶20). One nine-year-old female, who had run in terror from a large poisonous snake, nevertheless climbed down from her tree to gather up and carry to safety her three-year-old brother, who seemed unaware of the danger. (*Id.*) A different adolescent female prevented her infant brother from following their mother when the trail passed through a clump of tall grasses. (*Id.*) He screamed loudly, but she persisted until the grasses were behind them – it was infested with tiny ticks. (Subsequently the mother sat picking ticks off herself for a long time.) (*Id.*)

An older sibling will almost always adopt an infant if that infant's mother dies. (*Id.* at ¶21). Under the age of three, an infant, dependent on breast milk, will die. (*Id.*) One five-year-old male carried his one and a half year old sister around until she died a few months later. (*Id.*) Older infants usually survive when they are adopted. (*Id.*) This responsibility is clearly not socially advantageous for the young caregiver, who spends a lot of time and energy carrying out his or her duties. (*Id.*)

Maternal siblings of both sexes also supplement the mother with similar care-giving behaviours (except for suckling). (McGrew Supp. Aff. at ¶16; Goodall Aff. at ¶20). This preferential treatment endures throughout their lives; for example, adult brothers may work together in alliance to strive to rise in the community's dominance hierarchy. (McGrew Supp. Aff. at ¶16). The two highest-ranking female kinship lineages (matrilines) at Gombe, the longest-studied population of wild chimpanzees, in western Tanzania, are the F and G families. (*Id.*) In

these families, patterns of familial duties have extended through three generations, that is, grandmothers also participate in the upbringing of their grandchildren. These families also show the highest reproductive success, in terms of offspring survival. (*Id.*).

b. Duties beyond kinship: adoption

Chimpanzee duties of care extend beyond shared genes (kinship). (McGrew Supp. Aff. at ¶17; Jensvold Supp. Aff. at ¶14; Boesch Supp. Aff. at ¶21; Goodall Aff. at ¶¶21-22; Anderson Supp. Aff. at ¶15). Evidence from both captive and wild chimpanzees indicates that they possess highly developed empathic abilities. (Boesch Supp. Aff. at ¶21; Savage-Rumbaugh Supp. Aff. at ¶19c, 19i; Anderson Supp. Aff. at ¶15).

A chimpanzee infant orphaned by the death of the mother may be adopted by others to whom that infant is not related. (McGrew Supp. Aff. at ¶17; Jensvold Supp. Aff. at ¶14; Anderson Supp. Aff. at ¶15). Young chimpanzees are breast-fed and cared for five years by their mothers, so that if the youngsters lose them they remain especially vulnerable. (Boesch Supp. Aff. at ¶21; Goodall Aff. at ¶21). Adopted orphans are more likely to survive, while unadopted orphans below the age of weaning almost always perish. (McGrew Supp. Aff. at ¶17; Goodall Aff. at ¶21). Adoption is a very costly behaviour as it may require carrying the infant over long distances for days and months, sharing the nest and food with them and protecting them in cases of social squabbles. (Boesch Supp. Aff. at ¶21).

Adoption of orphans is common in chimpanzees, and as seen in other primate species, females are often the main adopters of orphans. (*Id.*). These foster parents need not be female, nor even adult. (McGrew Supp. Aff. at ¶17; Goodall Aff. at ¶21). Such bonds may last a lifetime, even between unrelated males in adulthood, as expressed in the ‘currency’ of chimpanzee social life, grooming. (McGrew Supp. Aff. at ¶17).

Among the Ivory Coast’s Tai forest chimpanzees, researchers observed that half of the adoptions were done by adult males; in a few cases researchers could show that the males were not genetically related to the adopted ones. (Boesch Supp. Aff. at ¶21). At Gombe a twelve-year-old adolescent male cared for a three and a half year old male orphan, and saved his life.

(Goodall Aff. at ¶22). His sense of responsibility was most impressive when he ran to seize the orphan when he got too close to socially roused males – despite the fact that adolescent males normally keep well away from the adult males at such times. (*Id.*). He often got beaten up for his altruistic behavior, but this did not prevent him from acting in the same way the next time his help was needed. (*Id.*).

The signing chimpanzee Washoe adopted a ten-month-old chimpanzee named Loulis. (Jensvold Supp. Aff. at ¶14). While they bore no genetic relationship, Washoe was a very protective adopted mother. (*Id.*). Even at Loulis’ late childhood age, Washoe was still very protective of him. (*Id.*). Graduate assistants lived in fear of Loulis’ screams, whether warranted or not, as they would bring Washoe down upon them in an instant. (*Id.*). Washoe would then immediately display aggressive behaviors to the caregiver in defense of her son. (*Id.*).

c. Cooperation and group belonging: solidarity in between-group contexts

Chimpanzee duties and responsibilities beyond the family (or lineage) cross over into the realm of the community (or unit-group), which is the basic social unit of chimpanzees. (McGrew Supp. Aff. at ¶18; Boesch Supp. Aff. at ¶15; Jensvold Supp. Aff. at ¶15; Anderson Supp. Aff. at ¶15). In tasks requiring cooperation, chimpanzees recruit the most skilled partners and take turns requesting, and helping a partner. (Jensvold Aff. at ¶9). Chimpanzees show “community concern” and concern for individuals. (Anderson Supp. Aff. at ¶15). As noted above, chimpanzees are capable of highly developed empathic abilities. (*Id.*). They surpass other species in terms of concern for others’ welfare, as shown when individuals console an unrelated victim of aggression by a third-party. (*Id.*).

One simple example is territorial defense. (McGrew Supp. Aff. at ¶18; Boesch Supp. Aff. at ¶15; Anderson Supp. Aff. at ¶15). Territories are aggressively defended in all chimpanzee populations that have been studied and the participants in patrols controlling the borders are mainly the adult males. (Boesch Supp. Aff. at ¶15; Anderson Supp. Aff. at ¶16). Chimpanzee territories are defended collectively, unlike the individual territories of most animals; they must

work together to defend themselves and their resources against their neighbours. (McGrew Supp. Aff. at ¶18; Anderson Supp. Aff. at ¶16).

Whenever intruders are spotted, males converge to defend their territory as a team. (Boesch Supp. Aff. at ¶15). If not enough males are present, the first to arrive silently sit and wait for other group members to join. (*Id.*). Only once a large enough group assembles will they confront the others. (*Id.*). This reveals expectations about the social participations of group members. (*Id.*).

Relations with neighbouring communities are hostile, so that stronger communities may displace weaker ones, resulting in loss of resources or reproductive partners. (McGrew Supp. Aff. at ¶18). Such extreme competition can enact a fatal toll: A single male caught in the border zone by the neighbours may be killed; a single female with infant similarly caught may have her baby killed and eaten by them. (*Id.*). Xenophobia exacts a cost on outsiders. (*Id.*).

To maintain territorial integrity, males cooperate regularly to patrol the boundaries of the community's territory. (McGrew Supp. Aff. at ¶19; Anderson Supp. Aff. at ¶16). If their territory is invaded, they display together against the intruders, or if necessary, attack them. This is a necessary chore. Numbers count, so any individual shirking responsibility lets down the group. (McGrew Supp. Aff. at ¶19). In a border skirmish, a male deserted by comrades may perish. (*Id.*). On the other hand, a united group may prevail and win rewards. (*Id.*). Such patrols are conducted cautiously and silently; a male who makes noise may give away his colleagues. (*Id.*). Even a snapped twig leads to disapproving glances from the others. (*Id.*). What makes this shared responsibility so impressive is that the same males whose lives depend on one another in the patrol will later compete robustly with one another over access to a receptive female. (*Id.*). Somehow, they can resolve the contradictions involved in having conflicting interests in different contexts. (*Id.*). This implies their mutual recognition of shared responsibilities. (*Id.*).

In many localities in Africa, adult male chimpanzees regularly patrol the boundaries of their community's territory; encounters with members of a neighbouring community may result in violent, even lethal aggression. (Anderson Supp. Aff. at ¶16). Males engage in patrols with

partners who are especially likely to be other males with whom individuals groom and form intra-community coalitions, in other words, individuals that can be trusted for support in the event of aggression breaking out. (*Id.*). Wild chimpanzees will call to warn approaching friends about the presence of a potentially dangerous object that the latter is unaware of. (*Id.*). These examples indicate the existence of well-defined roles within the community and mutual expectations about how individuals should behave in a range of situations. (*Id.*).

Impressive supports by male group members are provided to rescue isolated individuals that have been taken prisoner by intruders. (Boesch Supp. Aff. at ¶16). Outnumbered individuals during intergroup encounter were observed to sustain severe injuries in forty percent of the cases, leading to death in fifteen percent of the severe attacks. (*Id.*). In one example in the Taï forest, a single adult male with an adopted infant on his back rushed for 600 meters to rescue an adult female from his group that was trapped and beaten up by five male intruders. (*Id.*). His appearance created enough of a havoc to allow the female to escape. In Taï chimpanzees, such risky supports are provided in twenty-eight percent of the intergroup encounters. (*Id.*). This spontaneous high level of altruism toward group members in this chimpanzee population reveals the sense of obligation felt by them to help and protect one another. (*Id.*).

Chimpanzees' relationships to each other are even more supportive of each other than to a caregiver, no matter their level of fondness for the human. (Jensvold Supp. Aff. at ¶15). If a chimpanzee gives an aggressive display of behavior or indicator of being hurt or offended, the other chimpanzees always come to that chimpanzee's support by making aggressive barks at the human. (*Id.*). Again this is regardless of the individual relationship with the human. (*Id.*).

d. Social dynamics: male hierarchy

Another chimpanzee universal that necessarily entails duties and responsibilities is participation in a hierarchy of social dominance. (McGrew Supp. Aff. at ¶20; Jensvold Supp. Aff. at ¶10). Male chimpanzees rank-order themselves from alpha (top) to omega (bottom) in linear fashion. (McGrew Supp. Aff. at ¶20). Usually there is a single dominant male; but often he only holds that position by the support of other males. (Jensvold Supp. Aff. at ¶10). In these

cases these dominant males demonstrate a sense of duty to their supporters. (*Id.*) For example, the dominant male will provide grooming, access to females, and perhaps access to meat to his primary supporter. (*Id.*) Chimpanzees are also highly protective of their communities, and will go to great lengths to defend them. (*Id.*) This involves their shouldering responsibility. (*Id.*)

The advantages of high rank and the disadvantages of low rank are obvious: More dominant individuals win more resources and mates. (McGrew Supp. Aff. at ¶20). Two reasons stand out for why low-rankers take part in the system. It is better to be low-ranking in a group than to be unranked in solitude. (*Id.*) And, there are costs as well as benefits to being high-ranking, which low-rankers avoid. (*Id.*)

e. Lawful and rule-governed/policing within chimpanzee societies

High-ranking individuals in chimpanzee groups may take on the role of policing—defined as impartial interventions in conflicts by bystanders—to ensure group stability. (Anderson Supp. Aff. at ¶15). The adult males of a community are responsible for patrolling their territory, chasing away or attacking individuals from neighboring communities—this serves to protect and sometimes increase resources for their own females and young. (Goodall Aff. at ¶23; McGrew Supp. Aff. at ¶21, ¶23). Sometimes this takes the form of specific, targeted ostracism of individuals who violate norms, such as a young adult male who disrespected higher-ranking males, who was fatally punished. (McGrew Supp. Aff. at ¶23). This requires close cooperation and gang attacks. Even two males who may be engaged in challenging each other for social dominance within the community will join in an attack on a stranger. (Goodall Aff. at ¶23).

One of the costs of alpha status is the duty to exercise ‘policing’ powers in the community. (McGrew Supp. Aff. at ¶21, ¶23). The alpha male’s role includes a variety of time- and energy-sapping activities, such as intervening in quarrels or fights between other community members, thus maintaining community integrity and preventing injury. (*Id.* at ¶21). He oversees the distribution of valuable resources, such as meat, after a successful hunt. (This is not to say that such activities are altruistic, and some males may be less responsible than others, or more

self-serving, but these activities do help to maintain the common good.) (*Id.*). Finally, there are other, less obvious ‘chores’ associated with high rank: When crossing roads, high-ranking males lead the way, being vigilant for traffic, and bring up the rear, making sure that others are not left behind. (*Id.*).

f. Cooperation and group belonging: within-group solidarity

Another indicator of rule-governed social interaction within a group is systematic, long-term reciprocity of favours or benefits among its members. (McGrew Supp. Aff. at ¶24; Boesch Supp. Aff. at ¶17; Savage-Rumbaugh Supp. Aff. at ¶16, ¶18). Chimpanzees cooperate, and understand each other’s roles. (Anderson Supp. Aff. at ¶17, ¶21). Chimpanzees reward others, and keep track of others’ acts and outcomes. (*Id.* at ¶18). That is, “you scratch my back, I scratch yours.” (McGrew Supp. Aff. at ¶24). A simple form is literally this, that is, like-for-like social grooming, but a more complex form is the exchange of differing goods or services, for example, if I provision you with prized food, such as meat, then at a later point, you will favour me as a mate. (*Id.*). Or, if you support me in my aggressive attempts to rise in dominance, then I will allow you access to females for mating. (*Id.*). Such arrangements only work in the long term (i.e. over years) if participants assume and carry out obligations offered and accepted. (*Id.*).

1) Help and tending of injured or vulnerable group members

Chimpanzees may make numerous behavioural adjustments—sometimes markedly so—in order to ensure the welfare of injured or disabled members of the group. (Anderson Supp. Aff. at ¶15). When crossing a potentially dangerous road, stronger and more capable adult males investigate the situation before more vulnerable group-members, waiting by the roadside, venture onto the road. (*Id.* at ¶16). The males remain vigilant while taking up positions at the front and rear of the procession. (*Id.*).

Taï forest chimpanzee group members have been seen to help and tend the injuries of wounded individuals for extended periods of time. (Boesch Supp. Aff. at ¶17). What is striking in this helping of others is that upon hearing the alarm calls of an attacked individual (through a leopard or another chimpanzee), the males hearing the calls within seconds would make loud

supporting whaa-barks, reassure one another and rush towards the caller to help. (*Id.*). The rapidity of the help is decisive in the case of a leopard attack. (*Id.*). All males visibly present will rush in to support, so as if this within-group solidarity was obvious to them. (*Id.*). If callers had sustained injuries, the rescuers and other group members would converge towards the injured and clean and lick the wounds for many hours, and in some cases such help would be extended for many days as long as the wounds were not healed and presented a risk of infection. (*Id.*).

2) Food sharing and hunting duties

Chimpanzees and bonobos in the wild have duties to see that all members of the group have access to food, that all group members arrive at a feeding source together, and that all group members have access to that source in a manner as to benefit the entire group. (Savage-Rumbaugh Supp. Aff. at ¶13; Anderson Supp. Aff. at ¶16). This requires cognitive concentration, social rules, and a greater sense of social responsibility for the ‘good’ of the group rather than fulfilling the desires of the individual. (Savage-Rumbaugh Supp. Aff. at ¶13). Chimpanzees inhabit sparser environments than bonobos and therefore must travel in smaller parties, and generally feed at separate locations. (*Id.*). However the larger “unit group” does travel together, though out of sight of one another. (*Id.*). Individuals sleep separately, but in vocal contact with each other. The distances between a travelling group of chimpanzees make it mandatory for them to share similar information with one another. (*Id.*). It appears that long distance vocalizations are employed to announce arrival at large food patches, and other information regarding food and planned travel patterns are shared among group members. (*Id.*).

At Bossou, Guinea, adult male chimpanzees are significantly more likely than other age-sex classes to raid human-cultivated crops near villages; these foods are then taken back into the forest and shared with more timid capable members of the community, who hang back and allow the males to raid. (Anderson Supp. Aff. at ¶16).

Wild bonobos and chimpanzees demonstrate the ability to harvest a constantly changing forest. (Savage-Rumbaugh Supp. Aff. at ¶36). Their mental mapping is extremely fluid, rapid and highly accurate. (*Id.*). Chimpanzees and bonobos obtain food without weapons and hunting

is more of luxury than common event. (*Id.*) Meat is the only food reportedly shared by chimpanzees, who inhabit sparser environments and who are thus moving farther toward the lifestyles of human beings. Bonobos share all foods in their diet. (*Id.*) For bonobos to harvest their territories without the swidden agricultural practices¹¹ (employed by human beings living in the same areas) requires considerable planning, group communication, group coordination and cooperation. Everyone must fulfill his or her responsibilities for it to succeed. (*Id.*) The group must agree to travel together long distances each day—without food—in order to arrive at a particular food resource together. (*Id.*) The resource the group agrees to harvest one day will determine the options for travel that it will encounter the following day. Incorrect choices will lead to hunger for the entire group as the forest is a plentiful larder, but only if it is well known, well predicted and the entire group, infants, juveniles, pregnant females and the elderly are able to travel, as a group, the long distances required for harvesting. The planning required to make those critical decisions must be agreed to by the entire group and communicated, for the groups split up during travel, but arrive together at a common feeding resource. The mapping problem for traveling through a forest that is ripening in a very complex and somewhat variable manner is similar to the traveling salesman problem. (*Id.*) This not only requires advance planning but constantly updated information as well in order to maximize options for scheduling, sequencing, resource allocation and time investment planning. (*Id.*)

Advance planning and sharing of information is a duty and responsibility that lies at the heart of bonobo and chimpanzee survival in the wild. (Savage-Rumbaugh Supp. Aff. at ¶37). Chimpanzees and bonobos place great emphasis on activities that are devoted to monitoring one another and to the deep insults, threats, fears and angers that are generated when the actions of any group member threaten the unity and cohesion of the group. (*Id.*) Chimpanzees and bonobos take immediate insult and vociferous exception to all such actions. They are monitoring themselves and their rivals and react to any disturbances in what they perceive as a balance of

¹¹ An area cleared for cultivation through slash and burn.

power directed toward them. Chimpanzees and bonobos react to what they perceive as any change in the group balance of power, distribution of resources, or inappropriate behaviors and/or alliances, even friendly alliances. (*Id.*)

Important social contributions are rewarded in the hunting context. (Boesch Supp. Aff. at ¶18; Anderson Supp. Aff. at ¶18). Wild chimpanzees cooperate when hunting. (Anderson Supp. Aff. at ¶18). The striking fact in the hunting context is the very high level of cooperation between the males that act as a team to capture small monkeys up in the trees. (Boesch Supp. Aff. at ¶18; Anderson Supp. Aff. at ¶18). When a subgroup of chimpanzees moves into hunting mode in the presence of monkeys, individuals take up positions in trees or on the ground corresponding to different roles such as chaser and blocker. (Anderson Supp. Aff. at ¶18). If the hunt is successful, a monkey will eventually be caught and killed by one of the group of hunters. (*Id.*). In Taiï, once a capture has been made, the meat-sharing rules favor the hunters; males receive more meat if they participated in the hunt and even more so if they made an important contribution to the hunt. (Boesch Supp. Aff. at ¶18; Anderson Supp. Aff. at ¶18).

Hunting roles requiring anticipation of the prey movements are as equally well rewarded as capturing the prey, even if the individuals doing such movements were not making a capture. (Boesch Supp. Aff. at ¶18). Somehow, the group members realize that anticipating a prey is an essential part of a successful hunting team and they value this equally high as the one doing the capture itself (capturing the prey and performing complex anticipation ensures the same amount of meat). (*Id.*). Less important hunting movements, such as chasing or driving the prey, are not valued so highly by other group members, as they rarely make a decisive contribution to the capture. (*Id.*). This higher social valuing of hunting contribution by other group members allows for this cooperative system to be stable. (*Id.*)

Punishment is part of the meat sharing rules. (Boesch Supp. Aff. at ¶19; Anderson Supp. Aff. at ¶18). The rewarding of certain action leads to the passive punishment of individuals that are looking to access meat, but because they did not contribute to the hunt are only meagerly receiving some: Individuals that were present during the hunt but did not participate in it,

received 2.6 times less meat than hunters. (Boesch Supp. Aff. at ¶19). This rewarding of one's hunting contribution is often in conflict with dominance hierarchy (as dominant males are not always present during a hunt or simply not hunting), and despite the impressive and sometimes violent attempts by the dominant males to access the meat, hunters will be reliably allowed access to more meat by the sharing group (this observation applies only to the Taï chimpanzees and not to other chimpanzee populations where the meat sharing patterns follow different rules). (*Id.*). Regularly, dominant males, which want to access meat, display violently towards meat eaters, but access to meat is denied by the group of chimpanzees present. (*Id.*). In other feeding contexts, like in fruiting trees or when large amounts of fruit are clustered on the ground, alpha males can ascertain their priority of access; only in meat eating is his access denied or limited, when he did not participate in the hunt. (*Id.*).

A study of more than 4,600 interactions over food in a captive chimpanzee group recorded remarkably balanced exchanges of food between individuals: not only did food exchanges occur in both directions, individuals were more likely to share with another chimpanzee who had groomed them earlier that day. (Anderson Supp. Aff. at ¶18). The observed pattern of grooming and food transfers suggests the presence of reciprocal obligations. (*Id.*). In captivity, when presented with an “ultimatum game” in which both partners need to cooperate in order to split available rewards equally, chimpanzees and three-year-old human children behave similarly: both perform in a way that ensures a fair distribution of rewards. (Anderson Supp. Aff. at ¶19). Other studies show that human adults behave fairly in similar situations. In a “trust game” in which two chimpanzees can take a small reward for themselves or send a larger reward to a partner and trust that the partner will return some of it, chimpanzees spontaneously trust each other. Furthermore, they flexibly adjust their actions in the game depending on the degree of trustworthiness of the partner. (*Id.*).

3) Informing group members about danger

Chimpanzees have demonstrated a high sense of solidarity towards ignorant group members, which they would inform about the presence of a danger, like a snake for example.

(Boesch Supp. Aff. at ¶20; Jensvold Aff. at ¶9; Savage-Rumbaugh Supp. Aff. at ¶16). In a series of experiments, it was possible to show that if a chimpanzee discovers a snake near a path and he is followed at some distance by another chimpanzee that is ignorant about the danger, the first individual will make alarm calls until the follower sees the danger. (Boesch Supp. Aff. at ¶20; Jensvold Aff. at ¶9). In addition, he will position himself such that his body is pointing towards the snake. (*Id.*). If, however, he is followed by a chimpanzee that is aware of the presence of the snake, he will remain silent. (*Id.*). This was observed with chimpanzees living in the Budongo forest in Uganda. (*Id.*). This reveals that such a high sense of within-group solidarity is not restricted to one population or a response to one specific environmental condition, but is more a general property of social life in chimpanzees. (*Id.*).

Bonobos and chimpanzees who have acquired language also recognize the need to inform others of information of import, and they understand the circumstances that lead to others lacking information they themselves have. (Savage-Rumbaugh Supp. Aff. at ¶21). For example, they inform others of things that have led to danger, such as potential fires, wild dog packs nearby, branches on trees that are unstable, foods that are poisonous, location of hidden objects, causes of death of other group members, mistreatment of group members, deceit on the part of others, etc. (*Id.*).

4) Death-related duties

An impressive example of collective community action is what sometimes occurs after the death of a community member. (McGrew Supp. Aff. at ¶22). Others may perform what amounts to a funeral ceremony, or at least a wake. (*Id.*). They congregate around the corpse, groom and test it for viability, seeming to seek to arouse it. (*Id.*). Then, as if accepting that death has occurred, they maintain a silent vigil that may last for hours. (*Id.*). This collective action occurs both in nature and in captivity. (*Id.*). This appears to involve the exercise of duty or responsibility as there is no obvious material pay-off to the individuals who join in. (*Id.*).

3. CHIMPANZEES SHOULDER DUTIES AND RESPONSIBILITIES WITHIN CAPTIVE CHIMPANZEE SOCIETIES.

Research in captivity has established that chimpanzees can be trained or can learn spontaneously to work collaboratively with at least one other individual to solve a common problem that cannot be solved by a single individual. (Anderson Supp. Aff. at ¶17). After experiencing working alongside two different collaborators, chimpanzees prefer to work with a collaborator who has proved more effective in the past; thus they attribute different degrees of competence to other individuals. (*Id.*). In many cooperation tasks the outcome is that each partner receives a reward such as food. (*Id.*). However, immediate reward is not a prerequisite for cooperation: if one chimpanzee sees another trying to solve a problem and can also see the problem, the former may provide the precise tool that the latter requires, especially—but not only—if the latter requests the tool. (*Id.*). Notably, such helping persists even in the absence of reciprocation by the tool-user: chimpanzees continue to help partners in need of help despite receiving no obvious reward. (*Id.*). Similarly, when young chimpanzees observe a human trying to retrieve an out-of-reach object, they sometimes spontaneously retrieve the object and give it to the human although they receive no reward for doing so. (*Id.*). Chimpanzees will also perform a newly acquired skill (pulling a chain to open a door) so that another chimpanzee can gain access to food; again, the helper obtains no obvious payoff in this situation. (*Id.*).

Chimpanzees readily understand social roles and intentions. (Anderson Supp. Aff. at ¶21). In Premack and Woodruff's (1978) pioneering study, a chimpanzee was presented with videotaped scenes of a human actor faced with different problems, for example trying to reach inaccessible food, or trying to listen to a gramophone record. (*Id.*). When given a choice between a photograph of the solution to a problem (e.g., a stick with which to reach the food, or record player plugged in) alongside decoy photographs (e.g., irrelevant objects, or a gramophone cable plugged in but cut), the chimpanzee consistently chose the correct solution, i.e., that which the actor in the videos required to solve his problem. (*Id.*).

Chimpanzees distinguish between individuals who have harmful versus prosocial intentions. (Anderson Supp. Aff. at ¶22). They will point toward the one of two locations that is baited with hidden food if this results in a naïve, cooperative human finding the food and sharing it with the chimpanzee. (Chimpanzees in the wild have a communicative repertoire of more than 60 distinct nonverbal gestures). (*Id.*). But they also learn to point deceptively in the presence of a non-cooperative, selfish human – deliberately directing him toward the wrong location. (*Id.*). Chimpanzees discriminate between prosocial and antisocial individuals based not only on how those individuals behave toward the chimpanzees themselves, but also based on their treatment toward third parties: generous individuals are preferred to selfish individuals. (*Id.*).

Chimpanzees can adapt quickly to role-reversal in cooperative tasks. (Anderson Supp. Aff. at ¶23). In one study, chimpanzees were either trained to follow a human’s pointing gesture in order to find food, or trained to gesture to direct a naïve human toward hidden food. (*Id.*). Once this relationship was established, the roles were reversed: indicator chimpanzees now became the recipients of the communicative gesture, while previous recipients were now required to actively point for the human. (*Id.*). Unlike monkeys, for whom spontaneous role reversal appears very difficult, three quarters of the chimpanzees tested showed immediate comprehension of the changing roles and performed appropriately. (*Id.*). In conversations with a human, ASL-trained chimpanzees took turns appropriately, and as in humans their conversational turn-taking developed with experience. (*Id.*).

4. CHIMPANZEES SHOULDER DUTIES AND RESPONSIBILITIES WITHIN CHIMPANZEE/HUMAN SOCIETIES.

a. Promise-keeping and fair exchanges in chimpanzee/human societies

Chimpanzees prefer fair exchanges. (Anderson Supp. Aff. at ¶20). Chimpanzees and bonobos keep promises and secrets. (Savage-Rumbaugh Supp. Aff. at ¶¶27-28). In the wild, adult males employ this capacity to stealthily approach other groups for purposes of surprise attack. (*Id.*). In captivity, having acquired language, they remind others of events such as their

birthdays, days visitors are expected, etc. (*Id.*). They remind caretakers of trash that has not been carried out, drains that are clogged, computer programs that are mis-performing, etc. (*Id.*).

When apes are taken out of doors on leads they can be asked to promise to be good, not to harm anyone and to return when asked. (Savage-Rumbaugh Supp. Aff. at ¶28). If they promise these things they will keep their promise. (*Id.*). Should they decide they are not going to keep such a promise, reminding them of the promise, the need for and the reason for it, has always been sufficient to reinstate the promise. If they are not capable of understanding language at that level, they do not make and/or keep promises except for the immediate future (five minutes). (*Id.*). But language extends the time of promise keeping to years, thus serving as an extremely power mechanism for the development of very complex group networks of social obligations, responsibilities and duties. (*Id.*).

In the well-known inequity aversion procedure, a subject and a partner each exchange a token with an experimenter, who in turn rewards each individual with a food item. (Anderson Supp. Aff. at ¶20). Two chimpanzees will take turns exchanging with the experimenter as long as the value of the reward that each receives is the same. But when one chimpanzee sees the partner receive a higher-value reward for completing the same exchange (e.g., partner receives a grape, subject receives a small piece of cucumber), she is likely to either refuse to accept the reward or refuse to return the token. (*Id.*). In other words, they are intolerant of unfair treatment. (*Id.*). Furthermore, as in humans, chimpanzees' responses to reward inequity may vary with the quality of the relationship between subject and partner: they react less emotionally to unfairness if the partner is a close friend or relative. (*Id.*).

b. Duties and responsibilities in interactions with humans

Chimpanzees and bonobos evidence understanding of their duties and responsibilities both in their interactions with human beings and in their interactions with each other. (Savage-Rumbaugh Supp. Aff. at ¶13; Anderson Supp. Aff. at ¶24). Chimpanzees and bonobos have a clear understanding of their strength relative to that of humans (much greater) and their speed and agility (far greater). (Savage-Rumbaugh Supp. Aff. at ¶20). They demonstrate that they

understand the need to treat humans with care, whether the interactions be grooming, play, tree climbing, etc. (*Id.*). They slow down their pace, they exert exact control over their bodies and their teeth, with exceeding care and precision. (*Id.*).

A male chimpanzee in captivity rescued his human caretaker, Mark Cusano, with whom he had a close relationship, from a very bad attack from three adult females. (Goodall Aff. at ¶25). According to Mr. Cusano, the chimpanzee saved his life. (*Id.*).

There are fewer examples of wild chimpanzees exhibiting duties and responsibilities with respect to humans, although many examples can be found in relationships between captive chimpanzees and humans. (McGrew Supp. Aff. at ¶25; Savage-Rumbaugh Supp. Aff. at ¶¶19-34). Perhaps the best example in the wild is the simplest one: Researchers at Gombe National Park in Tanzania have studied wild chimpanzees for more than fifty-five years. (McGrew Supp. Aff. at ¶25). Tens of thousands of observation hours at close quarters have accumulated over these decades. (McGrew Supp. Aff. at ¶25; Goodall Aff. at ¶24). Most of the chimpanzees studied have spent time with researchers from birth onwards, their whole lives, on a daily basis. (McGrew Supp. Aff. at ¶25; Goodall Aff. at ¶24). Chimpanzees have impressive slashing canine teeth, such that a single bite to a human could cause serious injury, even death. (McGrew Supp. Aff. at ¶25; Goodall Aff. at ¶24). Yet, not a single instance has occurred of a chimpanzee biting a researcher. (McGrew Supp. Aff. at ¶25; Goodall Aff. at ¶24). They have been hit, stamped on, and dragged during displays, but never received bite wounds. (Goodall Aff. at ¶24).

One male in particular, Frodo, was continually charging people and hitting them, and sometimes pushing Dr. Goodall. (*Id.*). It is clear, however, that these chimpanzees only intend to impress, to emphasize their superiority. (*Id.*). Dr. Goodall recounts that on three separate occasions, when she was above a very steep drop, Frodo charged her, but did not make contact. (*Id.*). Their videographer, Bill Wallauer, reported four such occasions. (*Id.*). It was very clear to them that Frodo understood what would have happened on those seven occasions. (*Id.*). The same thing happened to Dr. Goodall with a different alpha male. They are clear examples of intention not to harm. (Goodall Aff. at ¶¶24-25). At the very least, it shows remarkable tolerance

or, more likely, they see the long-established relationship with these familiar humans as something they are duty-bound to uphold. (McGrew Supp. Aff. at ¶25).

When chimpanzees and local humans live at close quarters, especially in unprotected areas, outside of national parks or reserves, both parties must adjust to one another. (McGrew Supp. Aff. at ¶26; Savage-Rumbaugh Supp. Aff. at ¶22). Each impinges on the other, sometimes negatively (crop-raiding by apes; deforestation by humans), sometimes positively (each tolerates disturbance of their preferred daily routines). (McGrew Supp. Aff. at ¶26). Humans who tap wild palm trees for sap, which ferments into ‘palm wine’, allow chimpanzees to pilfer this beverage from their containers. (*Id.*).

Chimpanzees and bonobos living in captivity understand that they must remain in certain areas and not harm or scare human beings who are visitors or who do not know them. (Savage-Rumbaugh Supp. Aff. at ¶22). Frequently, when doors are left open they refuse to go into areas where they are not allowed. If humans whom they do not know inadvertently enter their areas, they avoid those human beings, in recognition that interaction with them is prohibited by rules of the facility, unless they feel threatened. (*Id.*).

Having acquired language, if chimpanzees or bonobos harm human beings, it is inevitably the case that they perceive those human beings as either having broken rules of conduct, having said something insulting (often out of another's persons earshot) or having threatened them or persons they trust. (Savage-Rumbaugh Supp. Aff. at ¶23). Whenever there exists a disagreement between a human and a chimpanzee or bonobo who has acquired language, the disagreement can be solved by explaining the reasons for the action. (*Id.* at ¶26). For example, if a bonobo does not wish a person to leave and stands in front of the door, repeatedly insisting they remain in the cage; this behavior can be negotiated by an explanation of the reason for leaving, such as dentist appointment, etc. (*Id.*).

c. Language-trained chimpanzees exhibit an enhanced ability to shoulder duties and responsibilities.

Chimpanzees and bonobos who have been raised in a research setting that required human beings to expect them to become linguistically and socially competent group members, much as other bonobos and chimpanzees expect of bonobo and chimpanzee children in natural settings, exhibit unique duties and responsibilities. (Savage-Rumbaugh Supp. Aff. at ¶¶19-34); Jensvold Supp. Aff. at ¶12). Having acquired language, chimpanzees and bonobos become increasingly trustworthy and responsible as they pass out of adolescence and into adulthood. (Savage-Rumbaugh Supp. Aff. at ¶24). They assume roles of group monitoring and teaching of children. (*Id.*). Having acquired language, they presume that humans will explain their intentions and that they are to do likewise. (*Id.* at ¶25). Every interaction becomes a linguistically negotiated contract. (*Id.*). These contracts can apply to time periods that are days, weeks and even years ahead and will be remembered and enacted at the appropriate time. (*Id.*).

1) Chores

Dr. Jensvold worked with five chimpanzees over nearly three decades studying how they use ASL to communicate with humans and each other. (Jensvold Supp. Aff. at ¶11). For decades, the daily routine at their Central Washington University laboratory in Ellensburg, Washington, involved the chimpanzees participating in numerous activities with caregivers. These included husbandry duties. (*Id.*).

In the mornings, the chimpanzees helped clean enclosures by returning their blankets from the night before. (Jensvold Supp. Aff. at ¶12). The chimpanzees all participated; it was the duty that the researchers placed upon them. (*Id.*). When new caregivers appeared, the chimpanzees sometimes made an attempt at ditching their duties, but eventually they bore the responsibility of returning blankets and other objects in the enclosure to the caregiver. This was done without bribery. (*Id.*).

At lunchtime, all of the chimpanzees were served a course of soup followed by a course of fresh vegetables that was offered only if all of the chimpanzees ate their soup. (Jensvold Supp.

Aff. at ¶13). If one of the chimpanzees refused to eat their soup, the others put pressure on the noneater by offering her the soup and a spoon. The noneater nearly always capitulated and ate the soup. This individual behavior that affected the group demonstrated their sense of responsibility and duty. (*Id.*).

2) Moral behavior

As noted, *supra*, at Section III-B-1, both ape and human adult members constantly behave in morally responsible ways as they understand them. (Savage-Rumbaugh Supp. Aff. at ¶14; Anderson Supp. Aff. at ¶20). Ape children acquire the moral sense and duties of both cultures and the languages of both cultures. (Savage-Rumbaugh Supp. Aff. at ¶29). Self-aware beings cognizant of their own identity, they come to desire to engage in mutually responsible moral actions. They come to display a sense of loyalty, duty, honor, and mutual respect which takes cognizance of the individuality and free-will of other self-aware beings. However, they extend this to human beings only as long as they are, in turn, treated similarly. (*Id.*).

Adult chimpanzees and bonobos, when reared in the proper manner, also become capable of duties and responsibilities that are “self-assigned.” (Savage-Rumbaugh Supp. Aff. at ¶30). They also acquire an understanding of how to behave in a manner that they begin to perceive as culturally appropriate for humans. (*Id.*). As this occurred, they began to demonstrate a sense of responsibility to help the human members of their Pan/Homo world attempt to show visitors how to begin to cross the species boundary. Additionally some *Pan* members, as they entered their decade of life, began to study this problem themselves and reflect upon it. This surprising event occurred when the Pan/Homo group found themselves relocated to a new facility where they had to cope with large numbers of people who viewed the *Pan* members as basically nonsentient, nonknowing, nonself-reflective beings. (*Id.*).

Moral behavior can be demonstrated in the chimpanzees’ use of the sign “SORRY,” which they acquired while reared as deaf human children. (Jensvold Supp. Aff. at ¶16). If they did something aggressive to a human, the chimpanzees often responded with “SORRY.” (*Id.*). These apologies go with morals and a sense of right and wrong. (*Id.*). When the Central

Washington University facility closed, the two remaining sign-language-using chimpanzees in the group, Tatu and Loulis, moved to a sanctuary with eleven other chimpanzees, none of whom knew sign language. (*Id.*). Tatu sometimes antagonized her new neighbors by poking sticks at them through the fencing. (*Id.*). That often elicited aggressive behavioral displays, to which Tatu would sometimes respond by signing “SORRY” to the offended chimpanzee. (*Id.*).

A critical component of the ape child’s desire to adopt and to accept duties and responsibilities resided in the emotional cross-cultural attachments between group members. (Savage-Rumbaugh Supp. Aff. at ¶16). These attachments were identical to those one finds in a human group or in any ape group, but transcended the species boundary. (*Id.*). Both apes and humans feel and openly express a deep sense of responsibility to one another. (*Id.*).

Both species in a *Pan/Homo* world become intensely aware of their differences and their similarities and engage in real and mutual trust and cooperation. (*Id.* at ¶34). Both species understand the magnitude of this event and that it requires far more than simple friendship. All sentient self-knowing entities, such as chimpanzees and bonobos, endowed with a sense of “I am” manifest the self-understanding, self-knowledge and self-choice that enable them to recognize, respect and acknowledge *the existence of a similar capacity* in the other species. (*Id.*). In this regard it is noteworthy, that while both apes and humans can love, rear, care for and interact with canids, adults of both species recognize that canids are incapable of the kind of self-knowledge that adult humans and adults apes possess. Therefore, neither species holds dogs responsible for “intentional actions” in the same way that hold other adult humans and/or apes responsible for such actions. (*Id.*). Apes did however, display far less patience with misbehavior on the part of dogs than the human members of their *Pan/Homo* culture. In part this was because when dogs attached themselves and their allegiance to particular apes and not others, this proved unsettling to the group. (*Id.*).

When apes are not reared as pets, these innate capacities enable attachments to emerge that are born of moral awareness of the needs of one’s group and one’s role within that group. (*Id.* at ¶15, ¶18). When not displaying their “human” skills for outsiders, all members of the

cross-cultural linguistic *Pan/Homo* culture that Dr. Savage-Rumbaugh created treated each other as members of one group. (*Id.* at ¶14, ¶18, ¶31). In that group all members had rights, roles, and responsibilities in accord with their abilities and maturity. (*Id.*)

In response to the highly distressing event of relocation to facility where they were all were treated very differently than had been the case at the Language Research Center where they were reared, Kanzi, Panbanisha and Nyota each began to try to find their own ways to help shoulder the new responsibilities imposed upon this *Pan/Homo* group. (*Id.* at ¶31). They started to assist those that the outsiders viewed as their “experimenters.” (*Id.*) Panbanisha began to repeatedly watch and comment on documentaries about human/ape differences. The earliest that caught her attention was “Harry and the Hendersons,” which she watched over and over as child. (*Id.*) As an adult, she studied the specials on PBS and the Discovery Channel. She also began to translate Kanzi’s vocal utterances onto the keyboard. Elykia began to understand some English and started to offer running translations of what humans were saying for her mother Matata, and her brother Maisha, knowing that they could not understand human language. Kanzi began to pose for photographers, doing precisely as they asked, so the photographers did not have to watch and “wait” for their shot. He began to carry out scenes for videographers precisely as they asked. Kanzi also taught Elykia (his mother Matata’s fourth daughter) how to smile for the camera, and for visitors. Panbanisha began teaching Matata how to use the symbol board filled with lexigrams, which she had acquired spontaneously as an infant, even before she began to speak “bonobo.” (*Id.*)

Maturation in the Pan/Homo world began to reflect back upon the wild caught bonobo matriarch of the group Matata. (*Id.* at ¶32). She had *refused* for decades to view the keyboard as a linguistic device. Once her children, Kanzi and Panbanisha, grew up and were regularly employing it to communicate with humans, each other, and their offspring, Matata started to show a greater interest in the potential of this device. (*Id.*) Also at this point, her children began to be able to vocally translate lexigrams into bonobo speech for her. As she began to grasp the true function of the keyboard, she started to study it for hours at a time; but always hid it, if

caught doing so. She continued to act as though she did not know lexigrams, but when the situation was urgent or critical, she could produce fully complete appropriate sentences; for example, one day when she became ill, she requested, “Give green medicine.” (*Id.*).

3) Other “human-like” duties

As they grew older, the chimpanzees and bonobos reared by Dr. Savage-Rumbaugh increasingly assumed a variety of duties for the purpose of demonstrating their abilities to outsiders. (Savage-Rumbaugh Supp. Aff. at ¶33). When outsiders were present, they would assume a responsibility to do things that were more “human-like.” (*Id.* at ¶19, ¶33).

It was in the conscious awareness of the bonobos and chimpanzees of the implicit agendas and external goals of their *Pan/Homo* group that one could most clearly discern the emergence of their capacity to assume duties and responsibilities in a human-like manner. (*Id.* at ¶33). They understood not only what they were doing, but why they were doing it. As is the case with humans, their understanding increased with age and experience. (*Id.*). Similarly their recognition of the degree to which persons who were outside their immediate *Pan/Homo* family *misunderstood* them increased. They became highly creative in trying to reach across the divide to even the most incredulous human beings. They slowed down their actions and sounds, they exaggerated them, they repeated them, they blended sounds, gestures and lexigrams and they waited till they noted that the humans were observing or their cameras were turned off before they engaged them. While these were skills that the human members of the group could model, they could never have been taught. Close observation of the behavior of others, while reflecting on the intent of others, requires the knowledge that the “other” has a mind, that the contents of two minds are not always the same, and that one must pay attention to the “attention” of the other if one wishes to successfully redirect their perspectives, ideas, views, etc. (*Id.*).

Individual chimpanzees and bonobos vary widely in their interests and in the particular capacities they sought to master, as do human children. (Savage-Rumbaugh Supp. Aff. at ¶18). Often, if one chimpanzee or bonobo excels in some skill, those close in age seek to excel in other skills; this demonstrates an awareness of their individual responsibility to fill a particular niche

within the community to maximize group utility. (*Id.*). For example, Kanzi viewed himself as the expert stone tool maker and the expert fire maker in the group. He felt it was his responsibility to demonstrate these skills, and to practice them. He did not appreciate that Panbanisha took this role, or was asked to take this role by humans in the name of research. Panbanisha was the artist and story manufacturer, Elykia was the translator between languages, Teco was the one who found a way to cheer up the group when their spirits were low, Matata taught the skills of the forest, Nathan was the mediator between the worlds, P-Suke was the sex symbol, Panzee was the puzzle resolver, Maisha was the show-off, Sherman was the leader, Lana was the critic and Austin was the careful one. Each of these apes recognized the roles of the others and “stood down” when the recognized expert set about to demonstrate these capacities for human visitors. (*Id.*).

As language comprehension increases in the human or ape, it allows the intent, and underlying behaviors, to be overtly expressed. (Savage-Rumbaugh Supp. Aff. at ¶25). As noted above, chimpanzees and bonobos who acquire language are often asked to carry out duties and responsibilities, and succeed. (Savage-Rumbaugh Supp. Aff. at ¶13). They routinely enter into contractual agreements. (*Id.*). Capacities indicative of the chimpanzees’ ability to assume duties and responsibilities and to make contractual agreements in the groups with which Dr. Savage-Rumbaugh worked included:

- a. A conscious awareness of the fundamental importance of fire, accompanied by an understanding that fire is produced by a variety of different kinds of activities.
 - 1) A conscious awareness of the need to responsibly practice this skill and to demonstrate it to human beings who place great value on it.
 - 2) A conscious awareness of all the component skills required (finding dry twigs and leaves, placing them in a pile, lighting them, adding additional larger pieces of wood as fuel, not adding too much fuel

and the need to keep the fire contained, the need to take to avoid being burned, and the need to put the fire out, lest it spread).

- 3) A conscious awareness of the way in which fire alters the texture, taste, and desirability of various foods, making some better and others worse.
 - 4) A conscious awareness of the properties and material required to start fire, i.e., small dry sticks, paper, etc.
- b. A conscious awareness of how to cook a meal as a human would, accompanied by an understanding of the responsibility to practice this and to demonstrate to human beings this ability. Within activities that dealt with cooking, they were many sub-components they were willing to demonstrate, including:
- 1) Obtaining pots and pans
 - 2) Obtaining foods
 - 3) Chopping foods
 - 4) Mixing and stirring foods
 - 5) Heating foods
 - 6) Serving foods
 - 7) Extracting juices
 - 8) Crushing seeds
 - 9) Blending foods as they processed them through different stages of heat
- c. Within their own social group they assumed responsibilities listed below:
- 1) Teaching younger group members rules about food sharing
 - 2) Teaching younger group members rules for how to interact with human beings
 - 3) Teaching younger group members about dangerous animals

- 4) Protecting younger group members from dangerous animals
- 5) Teaching younger group members about dangerous objects and/or locations in the environment
- 6) Protecting younger group members from dangerous objects and/or locations in the environment
- 7) Conveying vital information to other group members about the actions of humans as well as other group members that were out of site
- 8) Teaching those members of the bonobo group who had little human contact how to employ lexical symbols in communicative exchanges with human
- 9) Teaching those group members who had little human contact how to employ vocal symbols in exchanges with humans
- 10) Informing group members of any unusual or suspicious actions on the part of humans
- 11) Informing group members of any unusual or suspicious actions on the part of animals
- 12) Those who could comprehend spoken English assuming the responsibility to translate for other members that were unable to comprehend spoken English
- 13) Taking into account which members were not receiving sufficient food from human caretakers who made their own rules about how much food various bonobos were allowed and flaunting human rules by hiding food for those members who were being underfed
- 14) Protecting young humans and young apes from falling or engaging in activities that could lead to harm

- 15) Seeing that needed items, such as blankets were distributed among the group in a responsible manner
 - 16) Conveying to human beings whom they trusted, information regarding deceitful actions of other human beings
 - 17) Conveying to human beings whom they trusted, information regarding physical harm done to them by human beings who tried to intimidate and frighten the bonobos by violent means
 - 18) Reminding human beings of promises that had been made to themselves or to other members of their own social group
 - 19) Taking responsibility for care of dogs and making certain that dogs were properly treated
 - 20) Taking responsibility for care of orangutans and making requests for their needs when the orangutans were unable to do so for themselves
 - 21) A conscious awareness of the importance painting and writing serve as symbolic modes of expression. An understanding of the need to paint in a manner that is interpretable by human beings, and an ability to so do.
- d. A conscious awareness of the importance of making and understanding contractual agreements and promises (“If you do X I will do Y”, or “I do Y, will you promise to do X?”) and to keep them. These agreements are made linguistically and cover all manner of situations with both humans and other chimpanzees. Examples include:
- 1) “If you promise to stay with me, we will go outdoors.”
 - 2) “If you will watch Teco for me, while I go get tea, I will bring you some.”

- 3) “If you want some Austin’s Cheerios, please give some of your peanuts to him.”
 - 4) “If you promise not to tear up this computer, you may use it.”
 - 5) “If you will show the visitors how to use the keyboard now, we will go outdoors and make a fire later.”
 - 6) “If you will promise to take care of the dog, I will let it play with you.”
 - 7) “If you will translate what Matata is saying, I will take you for a car ride.”
 - 8) “If you leave a written note in the sand, X will read it on another day and leave here what you request.”
 - 9) “If you are good and help me while the visitors are here they will bring you a surprise.”
 - 10) “If you are quiet, no one will know we are here and we can listen to what they are saying.”
- e. A conscious awareness that humans are expected to uphold their end of contractual agreements and promises which they make to apes as well as to one another.
 - f. A conscious awareness of the importance humans attach to being able to tie knots and to link things together through this method.
 - g. A conscious awareness of the need to keep blankets and other nest-building materials laundered and folded and an awareness of the need to utilize clean blankets on the top side of the nest.
 - h. A conscious awareness of the importance humans place on the apes’ capacity to make stone tools, bone tools, and stick tools.
 - 1) A conscious awareness of the requirements of the various properties of these different classes of tools (i.e. stick tools can be

fashioned with hands and teeth, stone tools must be fashioned with other stone, bones can be split lengthwise in a manner that stone and wood cannot, etc.).

- 2) A conscious awareness of the uses to which tools of different shapes can be addressed.
 - i. A conscious awareness of the need for child-care. This includes a great sensitivity to the needs of infants, both those belonging to self and those belonging to others. It includes a conscious monitoring of what the infant can and cannot do, as well as what an infant can and cannot understand. It demands a conscious understanding of the kinds of things that must be done to ensure an infant's safety. This includes an understanding that the needs of human infants and bonobos differ considerably. (This skill was not highly developed in Matata; however Panbanisha's monitoring of infants and their requirements was essentially at the human level). This care and caution is not only exhibited when the infant is in clear and present danger (as is the case with most animal.). The care and caution is exerted long before the infant becomes endangered.
 - j. A conscious awareness of the need to keep the living facility clean according to human standards and to remove what humans designate as trash. Also a conscious awareness of what USDA inspectors search as demonstrated by helping to prepare for inspections (by hiding items they might asked to be removed from the enclosures, etc.).
 - k. A conscious awareness of the importance of sharing food among group members in an appropriate manner according to bonobo food rules as taught by Matata who was wild-reared.
 - l. A conscious awareness that most human beings neither understand, nor respect their capacity to employ symbols creatively and in contextually

appropriate novel manners. They attempt to meet such persons more than halfway, because they are keenly aware and understand that humans fail to grasp that any kind of symbolic system except their own could be symbolic or complex. Bonobos will go to great lengths to teach human words, preferring to do so only in contextually appropriate meaningful communicative contexts; because humans cannot grasp symbol meanings devoid of context.

- m. A conscious awareness that many humans fail to grasp that they understand spoken words and sentences at a high level. They will take great care to try and demonstrate this to humans in novel socially appropriate contexts. They have learned that responding in “test” situations, when humans repeat trials over and over, does little to convey their actual abilities and desire to avoid these settings. Some apes completely refuse them.
- n. A conscious awareness of numerosity, which gives them a grasp of numbers to twelve or more without actually counting. This can become accompanied by an awareness of the human desire for counting, and some apes have demonstrated behaviors that are true counting and reading.
- o. A conscious awareness of, and interest in, similar to that of human children, pretend play. This can be accompanied by a fascination with that play. This can take the form of object play, as when figures (toys representing apes) are engaged in actions of pretend attack. It can also take the form of pretending to do things to others such as pretending to be afraid, pretending to be angry, pretending to be asleep, pretending to hide, pretending to be another entity (as in wearing a mask), or pretending not to hear or see something obvious. This fascination can extend to pretending to do things to other chimpanzee and/or bonobos to determine if they

understand the pretense; for example whether other bonobos or chimpanzees understand that a plastic snake is not real, or that a person in a gorilla suit is not a gorilla.

- p. A conscious awareness of the power of deceit. This includes knowledge of “good” and “bad” and the capacity to label one’s own actions as belonging to one or the other of these categories.
- q. A conscious awareness of their ability to plan and co-ordinate group actions. This can be as simple as making a plan to make a fire and being sure that the needed items are packed, or as complex as making a plan to attack human beings who are perceived as deceitful or devious. Such plans are exchanged vocally and coordinated across space and time.
- r. A conscious awareness of the need to attempt to form connections with human beings on levels that human beings can understand. As experience with a variety of humans began to take place, the apes recognized that they needed to stretch their communicative competencies to try and enable human beings to understand their communications, their rules, and their view of what moral treatment entailed.

(Savage-Rumbaugh Supp. Aff. at ¶19).

C. NATIONAL INSTITUTION OF HEALTH STUDIES AND SAVE THE CHIMPS

On June 26, 2013, the National Institutes of Health (“NIH”) announced the agency’s decisions with respect to recommendations concerning the use of chimpanzees in NIH-supported research by The Working Group on the Use of Chimpanzees in NIH-Supported Research within the Council of Councils’ Recommendation. (Affidavit of Steven M. Wise (“Wise Aff.”) annexed as Exhibit A) (*Stanley*). These included acceptance of the following recommendations of The Working Group:

1. Working Group Recommendation EA1: “Chimpanzees must have the opportunity to live in sufficiently large, complex, multi-male, multi-female social groupings, ideally consisting of at least 7 individuals. Unless dictated by clearly documented medical or social circumstances, no chimpanzee should be required to live alone for extended periods of time. Pairs, trios, and even small groups of 4 to 6 individuals do not provide the social complexity required to meet the social needs of this cognitively advanced species. When chimpanzees need to be housed in groupings that are smaller than ideal for longer than necessary, for example, during routine veterinary examinations or when they are introduced to a new social group, this need should be regularly reviewed and documented by a veterinarian and a primate behaviorist.” (Wise Aff. Ex. A, p. 5) (*Stanley*).
2. Working Group Recommendation EA4: “Chimpanzees should have the opportunity to climb at least 20 ft (6.1m) vertically. Moreover, their environment must provide enough climbing opportunities and space to allow all members of larger groups to travel, feed, and rest in elevated spaces.” (*Id.* at Ex. A, pp. 8-9).
3. Working Group Recommendation EA5: “Progressive and ethologically appropriate management of chimpanzees must include provision of foraging opportunities and diets that are varied, nutritious, and challenging to obtain and process.” (*Id.* at Ex. A, pp. 9-10).
4. Working Group Recommendation EA6: “Chimpanzees must be provided with materials to construct new nests on a daily basis.” The NIH *accepted* this recommendation. (*Id.* at Ex. A, pp. 10-11).
5. Working Group Recommendation EA8: “Chimpanzee management staff must include experienced and trained behaviorists, animal trainers, and enrichment specialists to foster positive human-animal relationships and provide cognitive stimulation[.]” (*Id.* at Ex. A, pp. 11-12).

Sitting on 190 acres in Fort Pierce, Florida, Save the Chimps provides permanent homes for roughly 260 chimpanzees on twelve three-to-five-acre open-air islands that contain hills and

climbing structures and that provide the opportunity for the chimpanzees to make choices about their daily activities. (Affidavit of Molly Polidoroff (“Polidoroff Aff.”) at ¶7, ¶10). Chimpanzees who previously lived alone or in very small groups for decades become part of large and natural chimpanzee families. (*Id.* at ¶7). Grass, palm trees, hills, and climbing structures allow the chimpanzees places to run and roam, visit with friends, bask in the sun, or curl up in the shade, or whatever else they may wish to do. (*Id.* at ¶10). Save the Chimps has over fifty employees including two full time veterinarians that provide twenty-four-hour coverage with a support staff of technicians and assistants. (*Id.* at ¶9, ¶15).

IV. ARGUMENT

A. THE NhRP HAS STANDING TO BRING THIS HABEAS CORPUS PETITION.

Anglo-American law has long recognized that third parties may bring habeas corpus cases on behalf of detained third parties. CPLR 7002(a) provides: “[a] person illegally imprisoned or otherwise restrained of liberty within the state, *or one acting on his behalf* . . . may petition without notice for a writ of habeas corpus to inquire into the cause of such detention and for deliverance.” (emphasis added). *E.g.*, *Somerset*, Lofft 1, 98 Eng. Rep. 499 (unrelated third parties sought common law writ of habeas corpus on behalf of black slave imprisoned on a ship); *Case of the Hottentot Venus*, 13 East 185, 104 Eng. Rep. 344 (K.B. 1810) (Abolitionist Society sought common law writ of habeas corpus to determine whether an African woman was being exhibited in London of her own free will).

This Court correctly found that the NhRP had standing in *Stanley*, explaining as is relevant here: “[a]s the statute places no restriction on who may bring a petition for habeas on behalf of the person restrained, . . . petitioner has met its burden of demonstrating that it has standing.” *Stanley*, 16 N.Y.S.3d at 905. This ruling is supported by a long line of New York cases recognizing broad common law next friend representation in habeas corpus cases. *See Lemmon v. People*, 20 N.Y. 562 (1860) (as he had in other cases, the free black abolitionist dock worker, Louis Napoleon, sought a writ of habeas corpus on behalf of eight detained slaves with

whom he had no relationship); *Holzer v. Deutsche Reichsbahn Gesellschaft*, 290 N.Y.S. 181, 192 (Sup. Ct. 1936) (“In 1852 Mrs. Lemmon, of Virginia, proceeded to Texas via New York, with eight negro slaves. . . . Upon her arrival in New York a free negro, as next friend, obtained a writ of habeas corpus which was sustained.”), *aff’d in part, modified in part*, 277 N.Y. 474 (1938); *In re Kirk*, 1 Edm. Sel. Cas. 315 (N.Y. Sup. Ct. 1846) (as he would in *Lemmon, supra*, the dock worker, Louis Napoleon, sought a writ of habeas corpus on behalf of a slave with whom he had no relationship); *McLeod*, 3 Hill at 647 note j (“every Englishman . . . imprisoned by any authority . . . has an undoubted right, by his agents or *friends*, to . . . obtain a writ of habeas corpus”) (citations omitted, emphasis added). *See also* *People ex rel. Turano v. Cunningham*, 57 A.D.2d 801 (1st Dept. 1977) (habeas corpus petition filed by “next friend” of incarcerated inmate); *State v. Lascaris*, 37 A.D.2d 128 (4th Dept. 1971); *People ex rel. Hubert v. Kaiser*, 150 A.D. 541, 544 (1st Dept. 1912) (habeas corpus petition filed by “next friend” of incarcerated inmate); *People ex rel. Sheldon v. Curtin*, 152 A.D. 364 (4th Dept. 1912) (habeas corpus petition filed by “next friend” of woman detained at the Western House of Refuge for Women); *People ex rel. Rao v. Warden of City Prison*, 11 N.Y.S.2d 63 (Sup. Ct. 1939) (habeas corpus petition filed by “next friend” of prisoner). The NhRP therefore has standing to seek a common law writ of habeas corpus and order to show cause on behalf of Kiko.

B. VENUE IS PROPER IN NEW YORK COUNTY.

Against a claim of improper venue, this Court ruled that venue was proper in New York County, despite the fact that Hercules and Leo were being detained in Suffolk County. *Stanley*, 16 N.Y.S.3d at 905-07. CPLR 7002(b) provides, in relevant part: “a petition for the writ shall be made to: 1. the supreme court in the judicial district in which the person is detained; or . . . 3. *any justice of the supreme court[.]*” (emphasis added). *See also* *People v. Hanna*, 3 How. Pr. 39, 41-43 (N.Y. Sup. Ct. 1847) (“a justice of the supreme court has power, under the provisions of the statute, to allow this writ, notwithstanding there may be an officer in the county where the relator is alleged to be restrained of his liberty, authorised to exercise the same power”).

The *Stanley* order to show cause was properly made returnable to New York County just as an order to show cause would properly be made returnable to New York County in the present case. Pursuant to CPLR 7004(c), a writ *must* be returnable to the county in which it is issued except: a) where the writ is to secure the release of a person from a “state institution,” it must be made returnable to the county of detention; or b) where the petition was made to a court outside of the county of detention, the court *may* make the writ returnable to such county. In *Stanley*, the Court properly found that Hercules and Leo were not being detained in a “state institution” within the meaning of 7004(c), even though Hercules and Leo were being detained in a state educational facility, because that section applies only to state institutions that incarcerate inmates or institutionalize mental patients; otherwise the writ should normally be returned to the county of issuance. 16 N.Y.S.3d at 907. *See Hogan v. Culkin*, 18 N.Y.2d 330, 333 (1966); *Application of Holbrook*, 220 N.Y.S.2d 382, 384 (Sup. Ct. 1961). The “purpose of the rule is to relieve the wardens of State prisons of having to transport the inmates to a county other than the county of detention and incur travel expenses to distant courthouses.” *People ex rel. Cordero v. Thomas*, 329 N.Y.S.2d 131, 133-34 (Sup. Ct. 1972) (return was not required to be made in the county of detention in an Adolescent Remand Shelter, as the “relator is not being detained in a State prison” and thus, the “writ was properly issued and made returnable in Kings County”). *See also State ex rel. Cox v. Appelton*, 309 N.Y.S.2d 290, 292 (Sup. Ct. 1970) (holding that a state-run training school for children was not a “state institution” within the meaning of the rule and thus, the writ was properly returned to the county where the suit was filed). *A fortiori*, venue is proper here because unlike Hercules and Leo, Kiko is not being detained in a state facility of any kind, but in a cage in a privately-owned cement storefront. As venue was proper in New York County in Hercules and Leo’s case, it is proper here.

Furthermore, as with Hercules and Leo, the NhRP does not demand Kiko’s production, but an order requiring Respondents to show cause, within the meaning of CPLR 7003(a), why Kiko “should not be released.” The provision regarding “state institutions” was added to the statute solely to “obviate the administrative, security and financial burdens entailed in requiring

prison authorities to produce inmates pursuant to such writs in a county other than that in which they were detained[.]” *Hogan*, 18 N.Y.2d at 333 (citations omitted). None of those concerns are present. *See Appelton*, 309 N.Y.S.2d at 292 (where habeas corpus action was commenced by show cause order because petitioner’s production was not necessary, writ was returnable to the county of filing rather than the county of detention).

This Court rejected respondents’ arguments to the contrary explaining:

Here, if issued, the writ would not be directed to a state prison warden. Consequently, as “in all other cases,” the writ here is to be made returnable in the county of issuance, namely, New York County. That the University is denominated a “state-operated institution” in the Education Law is irrelevant. Moreover, where no factual issues are raised, no one sought the production in court of Hercules or Leo, and “[a]ll that remains is for the Court to issue its decision,” a change of venue is not required. (*Chaney v. Evans*, 2013 WL 2147533 at *3, 2013 N.Y. Slip Op 31025[U] [Sup Ct, Franklin County 2013] [even though petitioner administratively transferred to other county during pendency of habeas proceeding and no longer detained in Franklin County, change of venue not required]).

16 N.Y.S.3d at 907-08. This Court added: “In any event, ‘[s]o primary and fundamental’ is the writ of habeas corpus ‘that it must take precedence over considerations of procedural orderliness and conformity.’ . . . And the Legislature was so concerned that judges issue valid writs that it enacted a provision, unique in all respects, requiring that a judge or group of judges who refuse to issue a valid writ must forfeit \$1,000 to the person detained.” *Id.* (citations omitted).

C. NEITHER RES JUDICATA, COLLATERAL ESTOPPEL, NOR CPLR 7003(b) BARS THE ISSUANCE OF AN ORDER TO SHOW CAUSE IN THIS SECOND KIKO PETITION.

This Court in *Stanley* ruled that neither issue preclusion nor claim preclusion barred the issuance of an order to show cause in the NhRP’s second petition on behalf of Hercules and Leo. *Id.* at 908-10. The same applies to Kiko’s case at bar. *See People ex rel. Lawrence v. Brady*, 56 N.Y. 182, 192 (1874); *People ex rel. Leonard HH v. Nixon*, 148 A.D.2d 75, 79 (3d Dept. 1989); *People ex rel. Sabatino v. Jennings*, 221 A.D. 418, 420 (4th Dept. 1927), *aff’d*, 246 N.Y. 624 (1927). CPLR 7003(b) “continues the common law and present position in New York that res judicata has no application to the writ.” ADVISORY COMMITTEE NOTES TO CPLR 7003(b). Where

“a writ of habeas corpus has been dismissed and the prisoner continues to be held in custody, the prior adjudication is held not to be a bar to a new application for a writ of habeas corpus, even though the grounds may be the same as those previously passed upon.” *Post v. Lyford*, 285 A.D. 101, 104-05 (3d Dept. 1954). *People ex rel. Butler v. McNeill*, 219 N.Y.S.2d 722, 724 (Sup. Ct. 1961), was the petitioner’s fifth application for habeas corpus to the court, and in none of the previous four was he successful. Nevertheless, the court ruled that “the ban of res judicata cannot operate to preclude the present proceeding.” *Id.*

The rule “permitting relitigation . . . after the denial of a writ, is based upon the fact that the detention of the prisoner is a continuing one and that the courts are under a continuing duty to examine into the grounds of the detention.” *Id.* Therefore, “a court is always competent to issue a new habeas corpus writ on the same grounds as a prior dismissed writ.” *People ex rel. Anderson v. Warden, New York City Correctional Instn. for Men*, 325 N.Y.S.2d 829, 833 (Sup. Ct. 1971). *See Brady*, 56 N.Y. at 191-92; *Post*, 285 A.D. at 104-05; *Jennings*, 221 A.D. at 420; *Losaw v. Smith*, 109 A.D. 754 (3d Dept. 1905); *In re Quinn*, 2 A.D. 103, 103-04 (2d Dept. 1896), *aff’d*, 152 N.Y. 89 (1897); *McNeill*, *supra*. This is because “[c]onventional notions of finality of litigation have no place where life or liberty is at stake[.]” *Sanders v. United States*, 373 U.S. 1, 8 (1963). The “inapplicability of res judicata to habeas, then, is inherent in the very role and function of the writ.” *Id. See Post*, 285 A.D. at 104-05.

A court is not required to issue a writ from a successive petition for a writ of habeas corpus only if: (1) the legality of a detention has been previously determined by a court of the State in a prior proceeding for a writ of habeas corpus, (2) the petition presents no ground not theretofore presented and determined, and (3) the court is satisfied that the ends of justice will not be served by granting it. CPLR 7003(b). In this case none of the elements are satisfied. *See Stanley*, 16 N.Y.S.3d at 909 (“the governing statute itself poses no obstacle to this litigation”).

With respect to the second element of CPLR 7003(b), the NhRP has demonstrated in this Second Kiko Petition and in this accompanying Memorandum of Law, *supra* at 1, that the case at bar is quite distinct both legally and factually from the First Kiko Petition, First Tommy Petition

and *Lavery*. With respect to the first element of 7003(b), the legality of Kiko's detention has not been determined in a prior proceeding for a writ of habeas corpus by a court of this State. Notwithstanding the fact that the NhRP was granted an *ex parte* hearing (by telephone) on the issue of the availability of the common law writ of habeas corpus to chimpanzees, the Niagara County Supreme Court refused to issue the requested order to show cause and therefore did not determine the legality of Kiko's detention. That alone is insufficient for preclusion, as this Court noted, "[r]espondents cite no authority for the proposition that a declined order to show cause constitutes a determination on the merits, that it has any precedential value, or that a justice in one county is precluded from signing an order to show cause for relief previously sought from and denied by virtue of a justice in another county refusing to sign the order to show cause." *Stanley*, 16 N.Y.S.3d at 909.

The Fourth Department then upheld the lower court, finding, without reaching the issue of legal personhood, that the First Kiko Petition should have been dismissed on the ground that the NhRP did not seek Kiko's immediate release but sought to have him placed in an appropriate primate sanctuary. *Presti*, 124 A.D.3d at 1335. Significantly, the court suggested twice, without deciding, that it might agree with the NhRP's claim that Kiko was a "person" for the purpose of Article 70, stating, "[r]egardless of whether we agree with petitioner's claim that Kiko is a person within the statutory and common law definition of the writ . . ." and "even assuming, *arguendo*, that we agreed with petitioner that Kiko should be deemed a person for the purpose of the application." 124 A.D.3d at 1335.

Because the Niagara County Supreme Court refused to issue the order to show cause, the NhRP was no more given the required full and fair opportunity to litigate the legal issue of Kiko's personhood than it was given a full and fair opportunity to litigate the legal personhood of Hercules and Leo in Suffolk County. *Stanley*, 16 N.Y.S.3d at 909. *See Allen v. New York State Div. of Parole*, 252 A.D.2d 691 (3d Dept. 1998) (court refused subsequent petition as petitioner had been afforded "a full and fair opportunity . . . to litigate the issues"); *McAllister v. Div. of Parole of New York State*, 186 A.D.2d 326, 327 (3d Dept. 1992) (court refused subsequent

petition as petitioner “had a full and fair opportunity to litigate the timeliness issue in the habeas corpus proceeding”).

Further, this second attempt to invoke a common law writ of habeas corpus on behalf of Kiko is necessary only because the Fourth Department erroneously concluded the NhRP was unable to invoke the writ of habeas corpus at all, *infra*. Most importantly, if the NhRP is correct in its assertion of personhood and is refused the opportunity for a full and fair hearing, Kiko will be condemned to a lifetime of imprisonment and suffer certain destruction of his autonomy, social isolation, intellectual, emotional, and social stunting, severe emotional distress, feelings of hopelessness, and more.

D. A PERSON ILLEGALLY IMPRISONED IN NEW YORK IS ENTITLED TO A COMMON LAW WRIT OF HABEAS CORPUS.

The common law writ of habeas corpus “is deeply rooted in our cherished ideas of individual autonomy and free choice.” *Stanley*, 16 N.Y.S.3d at 903-04. “[T]he parameters of legal personhood have long been and will continue to be discussed and debated by legal theorists, commentators, and courts, and will not be focused on semantics or biology, or even philosophy, but on the proper allocation of rights under the law, asking, in effect, who counts under our law.” *Id.* at 912 (citing *Byrn*, 31 N.Y.2d at 201). In sum, “person” has *never* been synonymous with “human being.” Instead, it designates Western law’s most fundamental category by identifying those entities capable of possessing legal rights.

The NhRP does not claim Respondents are violating any federal, state, or local animal welfare law in the *manner* in which they are detaining Kiko. The issue in this case is not Kiko’s welfare, any more than a human prisoner’s welfare is at issue when he is being detained against his will in a habeas corpus case. The issue is whether Kiko, as an autonomous and self-determining being, may be legally detained at all.

As this section will demonstrate, the New York common law of *liberty* is, like the common law writ of habeas corpus itself, deeply rooted in autonomy. *Stanley*, 16 N.Y.S.3d at 903-04. It is a supreme common law value that trumps even the State’s interest in life, and is

protected as a fundamental right that may be vindicated through a common law writ of habeas corpus. New York common law *equality* forbids discrimination founded upon unreasonable means or unjust ends, and protects Kiko’s common law right to bodily liberty free from unjust discrimination. Kiko’s common law classification as a “legal thing,” rather than “legal person,” rests upon the illegitimate end of enslaving him. Simultaneously, it classifies Kiko by the single trait of being a chimpanzee, and then denies him the capacity to have any legal right. This discrimination is so fundamentally inequitable it violates basic common law equality. The New York legislature’s recognition that some nonhuman animals, such as chimpanzees, are capable of having personhood rights by expressly allowing them to be trust “beneficiaries” pursuant to EPTL 7-8.1 affirms that personhood may apply to natural entities other than human beings.

1. “Person” is not synonymous with “human being,” but designates an entity with the capacity for legal rights.

“[U]pon according legal personality to a thing the law affords it the rights and privileges of a legal person[.]” *Byrn*, 31 N.Y.2d at 201 (citing John Chipman Gray, *The Nature and Sources of the Law*, Chapter II (1909) (“Gray”); Hans Kelsen, *General Theory of Law and State* 93-109 (1945); George Whitecross Paton, *A Textbook of Jurisprudence* 349-356 (4th ed., G.W. Paton & David P. Derham eds. 1972) (“Paton”); Wolfgang Friedman, *Legal Theory* 521-523 (5th ed. 1967)). Legal persons possess inherent value; “legal things,” possessing merely instrumental value, exist for the sake of legal persons. 2 William Blackstone, *Commentaries on the Laws of England* *16 (1765-1769).

“Whether the law should accord legal personality is a policy question[.]” *Byrn*, 31 N.Y.2d at 201 (emphasis added). “Legal person” is not a biological concept; it does not “necessarily correspond” to the “natural order.” *Id.*; see *Stanley*, 16 N.Y.S.3d at 916-17 (same). It is not synonymous with human being. *Id.* See Paton, *supra*, at 349-50, *Salmond on Jurisprudence* 305 (12th ed. 1928) (“A legal person is any subject-matter other than a human being to which the law attributes personality. This extension, for good and sufficient reasons, of the conception of personality beyond the class of human beings is one of the most noteworthy

feats of the legal imagination,”); IV Roscoe Pound, *Jurisprudence* 192-93 (1959). “Legal personality may be granted to entities other than individual human beings, e.g. a group of human beings, a fund, an idol.” George Whitecross Paton, *A Textbook of Jurisprudence* 393 (3rd ed. 1964). “There is no difficulty giving legal rights to a supernatural being and thus making him or her a legal person.” Gray, *supra* Chapter II, 39 (1909), citing, among other authorities, those cited in *Byrn, supra*.

The NhRP’s arguments, *infra*, that an autonomous being is entitled to the common law right to bodily liberty protected by the common law writ of habeas corpus and CPLR Article 70, both as a matter of common law liberty and common law equality, are the policy arguments required by *Byrn*. See *Stanley*, 16 N.Y.S.3d at 911-12. The Court of Appeals’ use of the word “policy” in *Byrn* encompasses not just what is good and bad, but what is right or wrong, meaning “principle.” Benjamin N. Cardozo, *The Nature of the Judicial Process* 66 (Yale Univ. Press 1921) (“Ethical considerations can no more be excluded from the administration of justice ... than one can exclude the vital air from his room and live.”), quoting John F. Dillon, *The Laws and Jurisprudence of England and America* 18 (Little, Brown & Co. 1894), quoted by Roscoe Pound, 27 HARVARD L. REV. 731, 722 (1914). The common law of personhood is no different than any other determination of the common law, which itself “consists of a few broad and comprehensive principles founded on reason, natural justice, and enlightened public policy, modified and adapted to all the circumstance of all the particular cases that fall within it.” *Norway Plains Co. v. Boston and Maine Railroad*, 67 Mass (1 Gray) 263, 367 (1854) (Shaw, C.J.).

“Person” is a legal “term of art.” *Wartelle v. Womens' & Children's Hosp.*, 704 So. 2d 778, 781 (La. 1997). Persons count in law; things don’t. See Note, *What We Talk About When We Talk About Persons: The Language of a Legal Fiction*, 114 HARV. L. REV. 1745, 1746 (2001). “[T]he significant fortune of legal personality is the capacity for rights.” IV Roscoe Pound, *Jurisprudence* 197 (1959). “Person” has never been equated with being human and many humans have not been persons. “Person” may be narrower than “human being.” A human fetus,

which the *Byrn* Court acknowledged, 31 N.Y.2d at 199, “is human,” but did not characterize as a Fourteenth Amendment “person.” *See also Roe v. Wade*, 410 U.S. 113 (1973). Human slaves were not “persons” in New York State until the last slave was freed in 1827. Human slaves were not “persons” throughout the entire United States prior to the ratification of the Thirteenth Amendment to the United States Constitution in 1865. *See, e.g., Jarman v. Patterson*, 23 Ky. 644, 645-46 (1828) (“Slaves, although they are human beings . . . (are not treated as a person, but (*negotium*), a thing”).¹² Women were not “persons” for many purposes until well into the twentieth century. *See* Robert J. Sharpe and Patricia I. McMahon, *The Persons Case – The Origins and Legacy of the Fight for Legal Personhood* (2007). As this Court noted in *Stanley*, “Married women were once considered the property of their husbands, and before marriage were often considered family property, denied the full array of rights accorded to their fathers, brothers, uncles, and male cousins.” 16 N.Y.S.3d at 912 (citing Saru M. Matambanadzo, *Embodying Vulnerability: A Feminist Theory of the Person*, 20 DUKE J GENDER L & POLICY 45, 48–51 [2012]).

“Person” may designate an entity qualitatively different from a human being. Corporations have long been “persons” within the meaning of the Fourteenth Amendment to the United States Constitution. *Santa Clara Cnty. v. Southern Pacific Railroad*, 118 U.S. 394 (1886). An agreement between the indigenous peoples of New Zealand and the Crown, p.10, ¶¶ 2.6, 2.7, and 2.8, recently designated New Zealand’s Whanganui River Iwi as a legal person that owns its riverbed.¹³ The Indian Supreme Court has designated the Sikh’s sacred text as a “legal person.” *Shiromani Gurdwara Parbandhak Committee Amritsar v. Som Nath Dass*, A.I.R. 2000 S.C. 421. Pre-Independence Indian courts designated Punjab mosques as legal persons, to the same end. *Masjid Shahid Ganj & Ors. v. Shiromani Gurdwara Parbandhak Committee, Amritsar*, A.I.R.

¹² *E.g., Trongett v. Byers*, 5 Cow. 480 (N.Y. Sup. Ct. 1826) (recognizing slaves as property), *Smith v. Hoff*, 1 Cow. 127, 130 (N.Y. 1823) (same); *In re Mickel*, 14 Johns. 324 (N.Y. Sup. Ct. 1817) (same); *Sable v. Hitchcock*, 2 Johns. Cas. 79 (N.Y. Sup. Ct. 1800) (same).

¹³ *WHANGANUI IWI and THE CROWN* (August 30, 2012), available at <http://nz01.terabyte.co.nz/ots/DocumentLibrary%5CWhanganuiRiverAgreement.pdf> (last viewed December 29, 2015).

1938 369, para, 15 (Lahore High Court, Full Bench). A pre-Independence Indian court designated a Hindu idol as a “person” with the capacity to sue. *Pramath Nath Mullick v. Pradyunna Nath Mullick*, 52 Indian Appeals 245, 264 (1925).

In short, the struggles over the legal personhood of human fetuses,¹⁴ slaves,¹⁵ Native Americans,¹⁶ women,¹⁷ corporations,¹⁸ and other entities have never been over whether they are human, or anything other than whether justice demands that they “count.” See *Stanley*, 16 N.Y.S.3d at 912 (“the parameters of legal personhood have long been and will continue to be discussed and debated by legal theorists, commentators, and courts, and will not be focused on semantics or biology, or even philosophy, but on the proper allocation of rights under the law, asking, in effect, who counts under our law”). As to who “counts,” this Court explained that the “concept of legal personhood, that is, who or what may be deemed a person under the law, and for what purposes, has evolved significantly since the inception of the United States.” *Id.* Not “very long ago, only caucasian male, property-owning citizens were entitled to the full panoply of legal rights under the United States Constitution.” *Id.* See also *id.* at 912 (“For purposes of establishing rights, the law presently categorizes entities in a simple, binary, ‘all-or-nothing’ fashion. . . . Animals, including chimpanzees and other highly intelligent mammals, are considered as property under the law.”). This Court opined that “[i]f rights were defined by who exercised them in the past, then received practices could serve as their own continued

¹⁴ *Roe*, 410 U.S. 113; *Byrn*, 31 N.Y.2d 194.

¹⁵ Compare *Trongett v. Byers*, 5 Cow. 480 (N.Y. Sup. Ct. 1826) (recognizing slaves as property), *Smith v. Hoff*, 1 Cow. 127, 130 (N.Y. 1823) (same), *In re Mickel*, 14 Johns. 324 (N.Y. Sup. Ct. 1817) (same); *Sable v. Hitchcock*, 2 Johns. Cas. 79 (N.Y. Sup. Ct. 1800) (same) with *Lemmon*, 20 N.Y. 562 (slaves are free) and *Somerset*, 98 Eng. Rep. at 510 (slavery is “so odious that nothing can be suffered to support it but positive law”) (emphasis added).

¹⁶ *United States ex rel. Standing Bear v. Crook*, 25 F. Cas. 695, 697 (D. Neb. 1879) (Over the objections of the United States, Native Americans were deemed “persons” within the meaning of the Federal Habeas Corpus Act.).

¹⁷ *In re Goodell*, 39 Wis. 232, 240 (1875) (women could not be lawyers); Blackstone, *Commentaries on the Law of England* *442 (1765-1769) (“By marriage, the husband and wife are one person in law: that is the very being or legal existence of the woman is suspended during the marriage . . .”).

¹⁸ While corporations are Fourteenth Amendment “persons,” *Santa Clara*, 118 U.S. 394, they are not protected by the Fifth Amendment’s Self-Incrimination Clause. *Bellis v. United States*, 417 U.S. 85 (1974).

justification and new groups could not invoke rights once denied.” *Id.* (citing *Obergefell v. Hodges*, 135 S.Ct. 2602 (2015)).¹⁹

That Kiko is a chimpanzee does not necessarily mean that he may never count as a person. Who is deemed a person is a “matter which each legal system must settle for itself.” *Byrn*, 31 N.Y.2d at 202 (quoting *Gray*, *supra*, at 3). The historic question is whether Kiko “counts” for the purpose of a common law writ of habeas corpus. In the following sections, the NhRP will demonstrate that, both as a matter of New York common law liberty and common law equality, Kiko should “count” and be recognized as a legal person possessed of the common law right to bodily liberty that the common law of habeas corpus protects.

2. The Third Department’s *Lavery* decision does not bind this Court.

The Third Department’s *Lavery* decision that limits “persons” to those who can shoulder duties and responsibilities does not bind this Court. A court’s determination becomes “binding” only when it involves “settled principles of law and legal issues.” *State v. Moore*, 298 A.D. 2d 814, 815 (3d Dept. 2002). *E.g.*, *Samuels v. High Braes Refuge, Inc.*, 8 A.D.3d 1110, 1111 (4th Dept. 2004); *Killeen v. Crosson*, 218 A.D. 2d 217, 220 (4th Dept. 1996). *Lavery* did not involve a settled principle of law or legal issue for the following reasons.

First, *Lavery*’s assertion that a chimpanzee may not be a legal person for purposes of a common law writ of habeas corpus and Article 70 because he is unable to shoulder duties and responsibilities was wrong as a matter of law. In his letter brief to the Court of Appeals in support of the NhRP’s motion for further review, Harvard Law School Professor Laurence H. Tribe noted that “the lower courts fundamentally misunderstood the purpose of the common law writ of habeas corpus” and “reached its conclusion on the basis of a fundamentally flawed definition of legal personhood.” *Letter Brief of Amicus Curiae Laurence H. Tribe*, at 1, a true and correct copy of which is attached to the Second Kiko Petition as Exhibit 8. In his letter brief to the Court of Appeals, Professor Justin Marceau stated: “This may be one of the most

¹⁹ Similarly, Justice Cardozo noted that the personhood of corporations was the product of logic and not history, Benjamin N. Cardozo, *The Nature of the Judicial Process* 53 (Yale Univ. Press 1921).

important habeas corpus issues in decades and the lower court's resolution of the matter is in fundamental tension with core tenets of the historical writ of habeas corpus." *Letter Brief of Amicus Curiae Justin Marceau*, at 3, a true and correct copy of which is attached to the Second Kiko Petition as Exhibit 9. Taken together, it is clear that *Lavery* does not enunciate a settled principle of law or legal issue.

Second, that the Fourth Department decided *Presti* a month after the Third Department decided *Lavery*, failed to cite *Lavery* for the proposition that a chimpanzee could not be a "person" for the purpose of a common law writ of habeas corpus, or for any other proposition, and twice suggested, without deciding, that it might agree with the NhRP's claim that Kiko was a "person" for the purpose of Article 70, *Presti*, 124 A.D.3d at 1335, implies that the issue of chimpanzees not being persons for the purpose of habeas corpus was not settled.

Third, *Lavery* directly conflicts with the decision of the Court of Appeals in *Byrn*, 31 N.Y. 2d 194. As noted, in *Byrn*, the Court of Appeals made clear that the determination of personhood is a matter of public policy, not biology (in *Byrn* a fetus was declared both human and not a person). *Id.* at 201. *Lavery* erroneously concluded that only a human could be a "person," and as a result, failed to address the detailed public policy analysis in favor of personhood that the NhRP proffered in its brief and that *Byrn* required. 124 A.D.3d at 148-53. When faced with a choice of being bound by the Court of Appeals decision in *Byrn*, which demands that a decision regarding personhood be made only after a careful public policy analysis, or the conflicting decision of the Third Department in *Lavery*, which makes personhood a mere biological decision, this Court must be bound by *Byrn*.

3. *Lavery* was wrongly decided.

- a. The ability to shoulder duties and responsibilities is not, and has never been, necessary for legal personhood, especially for the purpose of a common law writ of habeas corpus.

Lavery is an outlier. It was the first decision in Anglo-American history to hold that an inability to shoulder duties and responsibilities is a sufficient ground for denying a fundamental

common law right to an individual (except in the interest of the individual's own interest), much less an autonomous, self-determining entity who is seeking the relief of a common law writ of habeas corpus. The *Lavery* court wrote that "animals have never been considered persons for the purpose of habeas corpus relief, nor have they been explicitly considered as persons or entities for the purpose of state or federal law." *Lavery*, 124 A.D.3d at 150. However, that is because no federal or state court had ever rejected the claim of personhood on behalf of an autonomous and self-determining nonhuman animal for the purpose of seeking common law habeas corpus relief, as no such claim had ever been presented. Moreover, New York expressly allows nonhuman animals to be trust beneficiaries and provides for an enforcer for a nonhuman animal beneficiary who "performs the same function as a guardian ad litem for an incapacitated person[.]" *In re Fouts*, 677 N.Y.S.2d 699, 700 (Sur. Ct. 1998). *See* argument, *infra*, at Section IV-E-4. The legislature's refusal to condition the personhood of nonhuman animal beneficiaries upon their ability to shoulder duties and responsibilities, *directly contradicts* the Third Department's assertion that legal personhood in New York is premised upon the ability to shoulder duties and responsibilities and that no nonhuman animal may be a "person" for any purpose.

Moreover, none of the cases the Third Department cited supported its proposition quoted above. The decisions were all "standing" cases that were dismissed pursuant to Article III of the United States Constitution or because the specific definition of "person" provided by the enabling statute did not include nonhuman animals. Not one case involved common law claims, as in the case of Kiko or any of the other imprisoned chimpanzees; all involved statutory or constitutional interpretation. In *Lewis v. Burger King*, 344 Fed. Appx. 470 (10th Cir. 2009), the *pro se* plaintiff, untrained in law, claimed her service dog had been given Article III standing to sue under the Americans with Disabilities Act of 1990, a claim the federal court properly rejected. In *Cetacean Community v. Bush*, 386 F. 3d 1169 (9th Cir. 2004), the federal court held that all the cetaceans of the world had not been given Article III standing to sue under the Federal Endangered Species Act and were not "persons" within that statute's definition of "person." In *Tilikum ex rel. People for the Ethical Treatment of Animals, Inc. v. Sea World Parks*

& *Entertainment*, 842 F. Supp.2d 1259 (S.D. Cal. 2012), the federal district court held that the legislative history of the Thirteenth Amendment to the United States Constitution (which, unlike the Fourteenth Amendment, does not contain the word “person”) makes clear that it was only intended to apply to human beings. Finally, in *Citizens to End Animal Suffering & Exploitation, Inc. v. New England Aquarium*, 836 F. Supp. 45 (D. Mass. 1993), the federal district court dismissed the case on the ground of Article III standing, stating that a dolphin was not a “person” within the meaning of Section 702 of Title 5 of the Federal Administrative Procedures Act.

The courts in the above cases however, agreed that a nonhuman animal could be a “person” if Congress so intended, but concluded that, with respect to the statutes or constitutional provisions involved in these cases, Congress had not so intended. *Lewis*, 344 Fed. Appx. at 472; *Cetacean Community*, 386 F.3d at 1175-1176; *Tilikum*, 842 F. Supp.2d at 1262, n.1; *Citizens to End Animal Suffering & Exploitation, Inc.*, 842 F. Supp.2d at 49.

The NhRP, which was an *amicus curiae* in the *Tilikum* case *supra*, and whose counsel was plaintiff’s counsel in *Citizens to End Animal Suffering & Exploitation, Inc.*, *supra*, did not bring the cases of Tommy, Kiko, and, Hercules or Leo in a federal court subject to Article III.²⁰ Nor, importantly, did the NhRP base its claims on federal or state statutes or on constitutional provisions. It instead sought a New York writ of habeas corpus, which substantively is entirely a matter of common law. *See Lavery*, 124 A.D.3d at 150 (“we must look to the common law surrounding the historic writ of habeas corpus to ascertain the breadth of the writ’s reach”); CPLR 7001 (“the provisions of this article are applicable to common law or statutory writs of habeas corpus”).

Similarly, none of the three cited cases supported the Third Department’s statement that “habeas corpus has never been provided to any nonhuman entity,” *Lavery*, 124 A.D.3d at 150, if what that court meant was that no entity that could possibly be detained against its will has ever

²⁰ The NhRP (under its former name of The Center for the Expansion of Fundamental Rights, Inc.) filed an *amicus* brief in the *Tilikum* case in which it argued that the capacity of the orcas to sue should be determined by their domicile, as the Court in *Citizens to End Animal Suffering & Exploitation, Inc.*, 842 F. Supp.2d at 49, had stated.

been denied a writ of habeas corpus. In *United States v. Mett*, 65 F. 3d 1531, 1534 (9th Cir. 1995), the federal court *permitted* a corporation to utilize a writ of coram nobis. In *Waste Management of Wisconsin, Inc. v. Fokakis*, 614 F. 2d 138, 140 (7th Cir. 1980) the federal court refused to grant habeas corpus to a corporation solely “because a corporation’s entity status precludes it from being incarcerated or ever being held in custody.” In *Sisquoc Ranch Co. v. Roth*, 153 F. 2d 437, 439 (9th Cir. 1946), the federal court held that the fact that a corporation has a contractual relationship with a human being did not give it standing to seek a writ of habeas corpus on its own behalf. Finally, in *Graham v. State of New York*, 25 A.D.2d 693 (3d Dept. 1966), the Court stated that the purpose of a writ of habeas corpus is to free prisoners from detention, not to secure the return of *inanimate* personal property, which was the relief demanded.²¹ In sum, no nonhuman who could possibly be imprisoned has ever demanded the issuance of a writ of habeas corpus, whether common law or statutory in the United States.

The reason there is no precedent for treating nonhuman animals as persons for the purpose of securing habeas corpus relief then is not because the claim has been rejected by the courts. It is because no nonhuman entity capable of being imprisoned (unlike a corporation), certainly not a nonhuman animal, and most certainly not an autonomous, self-determining being such as a chimpanzee, has ever demanded a writ of habeas corpus. The NhRP’s cases are the first such demands ever made on behalf of a nonhuman animal in a common law jurisdiction. But the novelty of their claim is no reason to deny Kiko, or any of the imprisoned chimpanzees, habeas corpus relief. *See, e.g., Crook*, 25 F. Cas. at 697 (that no Native American had previously sought relief pursuant to the Federal Habeas Corpus Act did not foreclose a Native American from being characterized as a “person” and being awarded the requested habeas corpus relief); *Somerset v. Stewart*, Lofft 1, 98 Eng. Rep. 499 (K.B. 1772) (that no human slave had ever been

²¹ The court in *Graham* relied on *People ex rel. Tatra v. McNeill*, 19 A.D.2d 845, 846 (2d Dept. 1963), which held that habeas corpus could not be used to secure the return of an inmate’s funds. There was no argument that the money was a legal person in *McNeill*, whereas here, the NhRP has provided ample legal and scientific evidence that a chimpanzee has sufficient qualities for legal personhood.

granted a writ of habeas corpus was no obstacle to the court granting one to the slave petitioner); *see also Lemmon*, 20 N.Y. 562.

In *Lavery*, 124 A.D.3d at 151, the court wrote:

[T]he ascription of rights has historically been connected with the imposition of societal obligations and duties. Reciprocity of rights and responsibilities stems from principles of social contract, which inspired the ideals of freedom and democracy at the core of our system. (see Richard L. Cupp, Jr., “Children, Chimps, and Rights: Arguments from ‘Marginal’ Cases,” 45 *Ariz. St. LJ* 1, 12-14 (2013); Richard L. Cupp, Jr., “Moving Beyond Animal Rights: A Legal Contractualist Critique,” 46 *San Diego L. Rev.* 27, 69-70 (2009); *see also Matter of Gault*, 387 U.S. 1, 20-21 (1967); *United States v. Barona*, 56 F.3d 1087, 1093-1094 (9th Cir. 1995), *cert. denied* 516 US 1092 (1996). Under this view, society extends rights in exchange for an express or implied agreement of its members to submit to social responsibilities. In other words, “Rights [are] connected to moral agency and the ability to accept societal responsibility for [those] rights” (Richard L. Cupp Jr., “Children, Chimps, and Rights: Arguments from ‘Marginal Cases,’” 45 *Ariz. St. LJ* 1, 13 (2013); Richard L. Cupp, Jr., “Moving Beyond Animal Rights: A Legal Contractualist Critique,” 46 *San Diego L. Rev.* 27, 69 (2009).

The *Gault* court merely stated that “[d]ue process of law is the primary and indispensable foundation of individual freedom. It is the basic and essential term in the social compact which defines the rights of the individual and delimits the powers which the state may exercise.” 387 U.S. at 20-21. There is no relevance to the case at bar. In *United States v. Barona*, 56 F.3d at 1093-94, the Ninth Circuit merely noted that resident aliens of the United States

must first show that they are among the class of persons that the Fourth Amendment was meant to protect . . . The Fourth Amendment therefore protects a much narrower class of individuals than the Fifth Amendment. Because our constitutional theory is premised in large measure on the conception that our Constitution is a “social contract” [citation omitted], “the scope of an alien’s rights depends intimately on the extent to which he has chosen to shoulder the burdens that citizens must bear.” [citations omitted] . . . “Not until an alien has assumed the complete range of obligations that we impose on the citizenry may he be considered one of ‘the people of the United States’ entitled to the full panoply of rights guaranteed by our Constitution.” [citation omitted]. The term “People of the United States” includes “American citizens at home and abroad” and lawful resident aliens within the borders of the United States “who are victims of actions taken *in the United States by American officials* [citation omitted] (emphasis in original). It is yet to be decided, however, whether a resident alien has undertaken sufficient obligations of citizenship or has “otherwise developed sufficient connection with this country” [citation omitted] to be considered one of the

“People of the United States” even when he or she steps outside the territorial borders of the United States.

This case is not relevant to the case at bar because it: (1) deals with an interpretation of the United States Constitution, rather than New York common law, and (2) concerns the interpretation of the constitutional phrase “the People of the United States,” not the New York common law meaning of the term “person,” which is the issue in the case at bar. Finally, the two law review articles cited by the *Lavery* court do not rely upon law or legal reasoning, but merely set forth Professor Cupp’s personal preference for an exceedingly narrow branch of philosophical theory of contractualism that arbitrarily excludes every nonhuman animal, while including every human being, in support of which he cites no cases.²² This caused the Third Department similarly to arbitrarily exclude every nonhuman animal, while including every human being.

Moreover, the writ of habeas corpus has *always* been applied to aliens and others who may not be a part of the fictitious “social contract.” In *Rasul v. Bush*, 542 U.S. 466, 481, 482 & n.11 (2004), the United States Supreme Court stated that:

Application of the habeas statute to persons²³ detained at the base (in Guantanamo) is consistent with the historical reach of the writ of habeas corpus. At common law, courts exercised habeas jurisdiction over the claims of aliens detained within sovereign territory of the realm, [n.11] *See, e.g., King v. Schiever*, 2 Burr. 765, 97 Eng. Rep. 551 (K.B.1759) (reviewing the habeas petition of a neutral alien deemed a prisoner of war because he was captured aboard an enemy French privateer during a war between England and France); *Sommersett v. Stewart*, 20 How. St. Tr. 1, 79–82 (K.B.1772) (releasing on habeas an African slave purchased in Virginia and detained on a ship docked in England and bound for Jamaica); *Case of the Hottentot Venus*, 13 East 195, 104 Eng. Rep. 344 (K.B.1810) (reviewing the habeas petition of a “native of South Africa” allegedly held in private custody).

²² Even contractualist philosophers may argue that it embraces nonhuman animals. *E.g.*, Thomas M. Scanlon, *What We Owe Each Other* 179, 183 (1998).

²³ The United States Supreme Court noted that, after the September 11, 2001 attack, “the President sent U.S. Armed Forces into Afghanistan to wage a military campaign against al Qaeda and the Taliban regime that had supported it. Petitioners in these cases are 2 Australian citizens and 12 Kuwaiti citizens who were captured abroad during hostilities between the United States and the Taliban.” 542 U.S. at 470-71. This Court may take judicial notice that not only were these petitioners not part of any “social contract,” but the United States alleged they desired to destroy whatever social contract may exist. Still they were eligible to seek a writ of habeas corpus.

American courts followed a similar practice in the early years of the Republic. See, e.g., *United States v. Villato*, 2 Dall. 379 (CC Pa. 1797) (granting habeas relief to Spanish-born prisoner charged with treason on the ground that he had never become a citizen of the United States); *Ex parte D’Olivera*, 7 F. Cas. 853 (No. 3,967) (CC Mass. 1813) (Story, J., on circuit) (ordering the release of Portuguese sailors arrested for deserting their ship); *Wilson v. Izard*, 30 F. Cas. 131 (No. 131 (No. 17, 810); (Livingston, J., on circuit) (reviewing the habeas petition of enlistees who claimed that they were entitled to discharge because of their status as enemy aliens).

In *Jackson v. Bulloch*, 12 Conn. 38, 42-43 (1837), the Supreme Court of Connecticut noted that the first section of the Connecticut Bill of Rights declares that “all men, when they form a social contract, are equal in rights . . . seems evidently to be limited to those who are parties to the social compact thus formed. Slaves cannot be said to be parties to that compact, or be represented in it.” Despite being excluded from the social compact, the petitioner slave was freed pursuant to a writ of habeas corpus. One can imagine numerous other cases where persons who are not able because of culture or disability to be a part of our social compact, as chimpanzees may be, or who may loathe the very existence of our social compact and wish to destroy it, are nevertheless able to avail themselves of a common law writ of habeas corpus.

Moreover, the words “duty,” “duties,” or “responsibility” do not appear in the *Byrn* majority opinion, which concerned the issue of whether a fetus was a “person” within the meaning of the Fifth and Fourteenth Amendments to the United States Constitution.²⁴ This was no accident. The Third Department ignored the Court of Appeals’ teaching of *Byrn* that “[w]hether the law should accord legal personality is a *policy question*.” 31 N.Y.2d at 201 (emphasis added). “It is not true . . . that the legal order necessarily corresponds to the natural order.” *Id.* “The point is that it is a *policy determination* whether legal personality should attach and *not a question of biological or ‘natural’ correspondence*.” *Id.* (emphasis added). See Paton, *supra*, at 349-50, *Salmond on Jurisprudence* 305 (12th ed. 1928) (“A legal person is any subject-

²⁴ The words “duty,” “duties,” or “responsibility” do not appear anywhere in the Second Department’s *Byrn* opinion either, with the single exception of the court noting that a lower federal court had upheld a restrictive abortion statute and stated that once human life has commenced, the constitutional protections found in the Fifth and Fourteenth Amendments impose upon the State the duty of safeguarding it. *Byrn v. New York City Health & Hospitals Corp.*, 39 A.D.2d 600 (2d Dept. 1972).

matter other than a human being to which the law attributes personality. This extension, for good and sufficient reasons, of the conception of personality beyond the class of human beings is one of the most noteworthy feats of the legal imagination.”).

As has been made clear in legal actions in other common law countries, an individual may be a “person” without having the capacity to shoulder any duties or responsibilities. New Zealand’s Whanganui River Iwi was designated a legal person though it has no duties or responsibilities. The Sikh’s sacred text was designated as a legal person though it has no duties or responsibilities. Mosques were designated as legal persons, though they had no duties or responsibilities. A Hindu idol was designated as a “person” though it has no duties or responsibilities.

Esteemed commentators cited both by the *Byrn* majority and the Indian Supreme Court agree. “Legal personality may be granted to entities other than individual human beings, e.g. a group of human beings, a fund, an idol.” George Whitecross Paton, *A Textbook of Jurisprudence* 393 (3rd ed. 1964). *Idols have no duties or responsibilities*. Indeed, John Chipman Gray, cited by the *Byrn* Court, makes clear that a “person” need not even be alive. “There is no difficulty giving legal rights to a *supernatural* being and thus making him or her a legal person.” Gray, *supra* Chapter II, 39 (1909) (emphasis added). *Such a being has no duties or responsibilities*. As Gray explained, there may also be

systems of law in which animals have legal rights . . . animals may conceivably be legal persons . . . when, if ever, this is the case, the wills of human beings must be attributed to the animals. There seems no essential difference between the fiction in such cases and those where, to a human being wanting in legal will, the will of another is attributed.

Id. at 43 (emphasis added).²⁵

The Third Department therefore erred in *Lavery* by failing to recognize that the decision whether a chimpanzee such as Kiko is a “person” for the purpose of demanding a common law writ of habeas corpus was entirely a *policy* question, and not a biological question. It further

²⁵ The New York Legislature recognized this when it enacted EPTL 7-8.1, which provided for an “enforcer” to enforce the nonhuman animal beneficiary’s right to the trust corpus.

failed to address the powerful uncontroverted policy arguments, based upon fundamental common law values of liberty and equality, that the NhRP presented in great detail both in that case, the Hercules and Leo cases, and in the case at bar.

Further, the Third Department in *Lavery* mistook the NhRP's demand for the "immunity-right" of bodily liberty, to which the ability to shoulder duties and responsibilities is irrelevant, with a "claim-right." Linking personhood to an ability to shoulder duties and responsibilities is particularly inappropriate in the context of a common law writ of habeas corpus to enforce the fundamental common law immunity-right to bodily integrity. The Third Department's linkage of the two caused it to commit a serious "category of rights" error by mistaking an "immunity-right" for a "claim-right." See generally, Wesley N. Hohfeld, *Some Fundamental Legal Conceptions as Applied in Judicial Reasoning*, 23 YALE L. J. 16 (1913). The great Yale jurisprudential professor, Wesley N. Hohfeld's, conception of the comparative structure of rights has, for a century, been employed as the overwhelming choice of courts, jurisprudential writers, and moral philosophers when they discuss what rights are. Hohfeld began his famous article by noting that "[o]ne of the greatest hindrances to the clear understanding, the incisive statement, and the true solution of legal problems frequently arises from the express or tacit assumption that all legal relations may be reduced to 'rights' and 'duties'" and that "the term 'rights' tends to be used indiscriminately to cover what in a given case may be a privilege, a power, or an immunity, rather than a right in the strictest sense." *Id.* at 28, 30.

With the greatest delicacy, Hohfeld gently pointed out, *id.* at 27, that even the distinguished jurisprudential writer, John Chipman Gray, made the same mistake as did the Third Department Court in his *Nature and Sources of the Law*.

In [Gray's] chapter on "Legal Rights and Duties," the distinguished author takes the position that a right always has a duty as its correlative; and he seems to define the former relation substantially according to the more limited meaning of 'claim.' Legal privileges, powers, and immunities are *prima facie* ignored, and the

impression conveyed that all legal relations can be comprehended under the conceptions, ‘right’ and ‘duty.’²⁶

The reason is that a claim-right, which the NhRP has *not* demanded in any previous habeas corpus petition on behalf of a chimpanzee, is comprised of a claim and a duty that correlate one with the other. Steven M. Wise, *Rattling the Cage – Toward Legal Rights for Animals* 56-57 (Perseus Publishing 2000); Steven M. Wise, *Hardly a Revolution – The Eligibility of Nonhuman Animals for Dignity-Rights in a Liberal Democracy*, 22 VERMONT L. REV. 807-10 (1998). The most conservative, but hardly the most common, way to identify which entity possesses a claim-right is to require that entity to have the capacity to assert claims within a moral community. Steven M. Wise, *Rattling the Cage*, at 57; Steven M. Wise, *Hardly a Revolution*, at 808-10. This is roughly akin to the personhood test the Third Department applied in *Lavery*.

Instead it is seeking the fundamental *immunity-right* to bodily liberty that is protected by a common law writ of habeas corpus. This immunity-right is what the United States Supreme Court was referring to when it stated that “[t]he right to one’s person may be said to be a right of complete *immunity*: to be let alone.” *Union P. R. Co. v. Botsford*, 141 U.S. 250, 251 (1891) (quoting *Cooley on Torts* 29) (emphasis added).

An immunity-right correlates not with a duty, but with a disability. Steven M. Wise, *Rattling the Cage*, at 57-59; Steven M. Wise, *Hardly a Revolution*, at 810-815. Other examples of fundamental immunity-rights are the right not to be enslaved guaranteed by the Thirteenth Amendment to the United States Constitution, in which all others are *disabled* from enslaving those covered by that Amendment, and the First Amendment right to free speech, which the government is *disabled* from abridging. One need *not* be able to shoulder duties or responsibilities to possess these fundamental rights to bodily liberty, freedom from enslavement, and free speech.

²⁶ Gray’s error becomes obvious when one recalls that Gray also agreed that both animals and supernatural beings could be “persons.” See Gray, *supra* at 10.

The decision of the United States Supreme Court in *Harris v. McRea*, 448 U.S. 297, 316-18, 331 (1980) illustrates the difference between a claim-right and an immunity-right. Eight years prior to *Harris*, the United States Supreme Court in *Roe v. Wade* recognized a woman's immunity right to privacy and against interference by the state with her decision to have an abortion in the earlier stages of her pregnancy. The *Harris* plaintiff claimed she *therefore* had the right to have the state pay for an abortion she was unable to afford. The Supreme Court recognized that the woman's *immunity-right* to an abortion correlated with the state's *disability* to interfere in her decision to have the abortion; it did *not* correlate with the state's *duty* to fund the abortion. Therefore she had no claim against the state for payment for her abortion.

The NhRP argues that Kiko has the common law immunity-right to the bodily liberty protected by the common law of habeas corpus. This fundamental immunity-right correlates solely with the Respondents' disability to imprison him. The existence or nonexistence of Kiko's ability to shoulder duties and responsibilities is entirely irrelevant; it is irrelevant to every immunity-right. It is particularly inappropriate to demand that, for Kiko to possess the fundamental immunity right to bodily liberty protected by the common law of habeas corpus, he must possess the ability to shoulder duties and responsibilities, when this ability has nothing whatsoever to do with his fundamental immunity-right to bodily liberty. It might make sense, for example, if Kiko was seeking to enforce a common law contractual right. But the ability to shoulder duties and responsibilities is not even a prerequisite for the claim-right of a "domestic or pet" animal in New York, pursuant to EPTL 7-8.1 Furthermore, this statute actually does grant not just Kiko, who is a beneficiary of a trust the NhRP created for him prior to the litigation, but every other "domestic or pet" animal in New York, the claim right to the money placed in the trust to which that nonhuman animal is a named beneficiary.²⁷

²⁷ That "domestic or pet" animals in New York State are "persons" within the meaning of EPTL 7-8.1 does not necessarily mean they are purposes for any other reason, just as Kiko's being a "person" for the purpose of the common law writ of habeas corpus would not necessarily mean he is a "person" for any other purpose.

The Third Department thus erred in requiring that a “person” for the purpose of securing a common law writ of habeas corpus be capable of shouldering duties and responsibilities; in practical terms, that the claimant be a human being. *Lavery*, 124 A.D.3d at 151-53. In arriving at this conclusion, the court relied on inapposite cases, cited law review articles that endorse a minority philosophical argument, and ignored not just EPTL 7-8.1, *supra*, but multiple teachings of the New York Court of Appeals set forth in the *Byrn* case establishing that personhood is a matter of public policy, *supra*.

- b. The Third Department exceeded its authority by taking judicial notice, without notice to the parties, that chimpanzees lack the capacity to shoulder duties and responsibilities.

The Third Department further improperly took judicial notice of the alleged scientific fact that chimpanzees lack the capacity to shoulder duties and responsibilities. *Lavery*, 124 A.D.3d at 151. *See Hamilton v. Miller*, 23 N.Y.3d 592, 603-04 (2014) (“scientific” facts are inappropriate for judicial notice); *TOA Const. Co. v. Tsitsires*, 54 A.D.3d 109, 115 (1st Dept. 2008). A New York court may only take judicial notice of facts “which everyone knows,” *States v. Lourdes Hosp.*, 100 N.Y.2d 208, 213 (2003) or which are common knowledge, notorious, or indisputable. *TOA Const.*, 54 A.D.3d at 115; *People v. Darby*, 263 A.D.2d 112, 114 (1st Dept. 2000); *People v. Jovanovic*, 263 A.D.2d 182, 203 (1st Dept. 1999). Judicial notice of a fact is only proper when adjudicative facts are commonly known to exist. *Dollas v. W.R. Grace & Co.*, 225 A.D.2d 319, 320 (1st Dept. 1996). “Adjudicative facts” are “propositions of general knowledge which are capable of immediate and accurate determination by resort to easily accessible sources of indisputable accuracy.” Jack B. Weinstein, Harold Korn & Arthur R. Miller, *New York Civil Practice*, § 4511.02 (2d Ed. 2005). *See People v. Jones*, 73 N.Y.2d 427, 431 (1989) (same). A “court may only apply judicial notice to matters ‘of common and general knowledge, well established and authoritatively settled, not doubtful or uncertain. The test is whether sufficient notoriety attaches to the fact to make it proper to assume its existence without proof.’” *Dollas*, 225 A.D.2d at 320 (quoting *Ecco High Frequency Corp. v. Amtorg Trading Corp.*, 81 N.Y.S.2d

610, 617 (N.Y. Sup. Ct. 1948) (“It is quite clear that within this rule the doctrine has no place in this case.”).

That chimpanzees cannot shoulder duties and responsibilities is not an adjudicative fact, but a scientific fact that requires proof through expert testimony. Judicial notice is inappropriate in “scientifically complex cases.” *Hamilton*, 23 N.Y.3d at 603-04. In *Hamilton*, the Court of Appeals admonished, “[w]hat Hamilton really wanted was to have Supreme Court take judicial notice of the fact that exposure to lead paint can cause injury. . . . But general causation, at least in scientifically complex cases, is not such a fact. Hamilton needs to prove, through scientific evidence, that exposure to lead-based paint can cause the injuries of which he complains.” *Id.* (citing *Parker v. Mobil Oil Corp.*, 7 N.Y.3d 434, 448 (2006)). The Court added, “[h]e cannot avoid that burden simply because Congress, in statutory preambles, has opined on the dangers of lead-based paint.” *Id.* As it is inappropriate to take judicial notice of scientific facts found in “statutory preambles,” *id.*, it was inappropriate for the Third Department to take judicial notice of scientific facts based solely upon two law review articles written by a lawyer, who is not a scientist, neither of which even cited to any peer-reviewed scientific evidence of the alleged incapacity of chimpanzees to shoulder duties and responsibilities. *See Lavery*, 124 A.D.3d at 151 (relying on two law review articles by Richard L. Cupp, Jr. for its conclusion).²⁸

²⁸ Some facts considered “scientific” are appropriate for judicial notice. But they must be “notorious facts” that cannot be disputed and are supported by reference “to sources of indisputable reliability.” *In re Perra*, 827 N.Y.S.2d 587, 592 (Sup. Ct. 2006). For instance, in *Perra*, the court took “judicial notice that smoking while pregnant has a harmful effect on the fetus, leading to the increased possibility of Sudden Infant Death Syndrome, or SIDS, after the baby is born,” reasoning, “[i]t is well-established that notorious facts relating to human life can be judicially noticed.” *Id.* (citing Prince, Richardson on Evidence, § 2–204 et seq. (Farrell 11th ed.)). In so doing, the court based its notice on a number of “indisputably reliable” sources including “the 2006 Surgeon General’s Report On The Health Consequences of Involuntary Exposure to Tobacco Smoke,” a “document created by the Office of the Surgeon General and the U.S. Department of Health and Human Services.” The “Report collects and analyzes the vast amount of research, both past and current, performed in the area of tobacco smoking and its effects on various aspects of health. The Surgeon General has released its report documenting the health effects of tobacco smoke since 1977 (DHHS 2006 I). Since that time, the Surgeon General’s report has been much discussed and its findings much publicized in the years since, such that no reasonable person could state their lack of awareness as to the deleterious effects of tobacco smoking.” *Id.* The court even observed: “Indeed, the findings of the Surgeon General are so well-respected and well-publicized

For a court to take judicial notice of a fact, the source of the underlying information must be of “indisputable accuracy.” *Crater Club v. Adirondack Park Agency*, 86 A.D.2d 714, 715 (3d Dept. 1982). The use of judicial notice as a substitute for foundation testimony should be limited to those situations in which the records are so “patently trustworthy as to be self-authenticating.” *People v. Kennedy*, 68 N.Y.2d 569, 577 (1986). Neither of the law review articles relied upon by the Third Department is a source of “indisputable accuracy” nor “patently trustworthy as to be self-authenticating” on the fact that chimpanzees lack the capacity to shoulder duties and responsibilities. *Id.* See, e.g., *TOA Const.*, 54 A.D.3d at 115. See also *Robinson ex rel. Chapman v. Bartlett*, 95 A.D.3d 1531, 1536 (3d Dept. 2012).

Judicial notice by the Third Department was further inappropriate “because of the novelty of the issue in this State.” *Brown v. Muniz*, 61 A.D.3d 526, 528 (1st Dept. 2009). In *Brown*, the First Department refused to take judicial notice of the fact that a driver can react to an emergency situation in less than a second because it was novel in New York State. *Id.* There is not a single case in New York, or in any other state to the NhRP’s knowledge, where a court has taken judicial notice of the “fact” that chimpanzees cannot shoulder duties and responsibilities.²⁹

that other nations, such as Great Britain, base their anti-smoking laws on the Surgeon General's reports.” *Id.* (citations omitted). Respectfully, the same cannot be said of the Cupp articles.

²⁹ Assuming, *arguendo*, that the Third Department properly considered chimpanzees’ capacity for shouldering duties and responsibilities appropriate for judicial notice, the Third Department’s *sua sponte* judicial notice of that fact, without providing the NhRP notice or opportunity to be heard, deprived the NhRP of its right to fundamental fairness. *Brown*, 61 A.D.3d at 528 (fairness “require[s] that we ‘afford the parties the opportunity to be heard as to the propriety of taking judicial notice in the particular instance.’”) (citing Prince, Richardson On Evidence § 2–202 [Farrell 11th ed.]). “[F]undamental fairness dictates that [the court] should provide the parties with advance notice of its intention to” take judicial notice of facts. *Chasalow v. Bd. of Assessors*, 176 A.D.2d 800, 804 (2d Dept. 1991) (citing Richardson, Evidence § 14 [Prince 10th Ed]). See *Am. Exp. Bank, FSB v. Bienenstock*, 17 N.Y.S.3d 381, 2015 N.Y. Misc. LEXIS 2116, *1-2 (2d Dept. 2015) (same). As the Third Department “did not give the parties advance notice of its intention to take judicial notice, the court improperly considered the ‘facts’ of which it took judicial notice.” *Id.* See also *Brown*, 61 A.D.3d at 528 (“Here, neither party requested that we take judicial notice of the “fact” that a driver can react to an emergency situation in less than a second, and thus the parties have not had the opportunity to address this issue.”).

- c. If the capacity to shoulder duties and responsibilities is required for habeas corpus personhood, then the NhRP has demonstrated that Kiko possesses that capacity.

As argued, *supra*, the Third Department in *Lavery* erred in holding that the capacity to shoulder duties and responsibilities is required for habeas corpus personhood. Even if this Court agrees with the Third Department’s erroneous premise – that rights are contingent upon the ability to shoulder duties and responsibilities – or disagrees but believes it is bound to follow that court’s holding, it must still order Kiko discharged as the evidence presented in this case demonstrates, *supra* at Section III-B, that Kiko possesses the capacity to shoulder duties and responsibilities and has otherwise met every fair requirement to be considered a “person” for the purpose of demanding a common law writ of habeas corpus.

In the attached Supplemental Affidavits and the affidavit of Dr. Jane Goodall, some of the world’s greatest experts in chimpanzee cognition set forth facts that conclusively demonstrate that chimpanzees such as Kiko understand and shoulder duties and responsibilities, in their own societies and human/chimpanzee societies, including, among others, the capacity to knowingly assume obligations then honor them, behave in ways both lawful and rule-governed, have moral inclinations and a level of moral agency, ostracize individuals who violate social norms, respond negatively to inequitable situations, have a social life that is cooperative and represents a purposeful and well-coordinated social system, routinely enter into contractual agreements, keep promises and secrets, assume death-related duties, prefer fair exchanges, and show concern for others’ welfare. This is far and away a showing sufficient for personhood to the limited extent of Kiko’s being able to invoke the common law writ of habeas corpus and thereby seek the aid of this Court to prevent his being condemned to a lifetime of imprisonment.

4. As common law natural persons are presumed free, Respondents must prove they are not unlawfully imprisoning Kiko.

Its roots anchored into the depths of English history, the common law has been “viewed as a principle safeguard against infringement of individual rights.” Judith S. Kaye, *Forward: The Common Law and State Constitutional Law as Full Partners in the Protection of Individual*

Rights, 23 RUTGERS L. J. 727, 730 (1992) (hereafter “Judith S. Kaye”). All autonomous common law natural persons are presumed to be entitled to personal liberty (*in favorem libertatis*). See *Oatfield v. Waring*, 14 Johns. 188, 193 (Sup. Ct. 1817) (on the question of a slave’s manumission, “all presumptions in favor of personal liberty and freedom ought to be made”); *Fish v. Fisher*, 2 Johns. Cas. 89, 90 (Sup. Ct. 1800) (Radcliffe, J.); *People ex. rel Caldwell v Kelly*, 13 Abb.Pr. 405, 35 Barb. 444, 457-58 (Sup Ct. 1862) (Potter, J.).

The common law of England, incorporated into New York law, was long *in favorem libertatis* (“in favor of liberty”).³⁰ Francis Bacon, “The argument of Sir Francis Bacon, His Majesty’s Solicitor General, in the Case of the Post-Nati of Scotland,” in IV *The Works Of Francis Bacon, Baron of Verulam, Viscount St. Alban And Lord Chancellor* 345 (1845) (1608); 1 Sir Edward Coke, *The First Part of the Institutes of the Laws of England* sec. 193, at *124b (1628); Sir John Fortescue, *De Laudibus Legum Angliae* 105 (S.B. Chrimes, trans. 1942 [1545]). See, e.g., *Moore v. MacDuff*, 309 N.Y. 35, 43 (1955); *Whitford v. Panama R. Co.*, 23 N.Y. 465, 467-68 (1861) (“prima facie, a man is entitled to personal freedom, and the absence of bodily restraint . . .”); *In re Kirk*, 1 Edm. Sel. Cas. at 327 (“In a case involving personal liberty [of a fugitive slave] where the fact is left in such obscurity that it can be helped out only by intendments, the well established rule of law requires that intendment shall be in favor of the prisoner.”); *Oatfield*, 14 Johns. at 193; *Fish*, 2 Johns. Cas. at 90 (Radcliffe, J.); *Kelly*, 33 Barb. at 457-58 (Potter, J.) (“Liberty and freedom are man’s natural conditions; presumptions should be in favor of this construction.”). New York statutes are in accord with this common law presumption. See N.Y. Stat. Law § 314 (McKinney) (“A statute restraining personal liberty is strictly construed”); *People ex rel. Carollo v. Brophy*, 294 N.Y. 540, 545 (1945); *People v. Forbes*, 19 How. Pr. 457, 11 Abb.Pr. 52 (N.Y. Sup. Ct. 1860) (statutes must be “executed carefully in favor of the liberty of the citizen”).

³⁰ References to the overarching value of bodily liberty may be found as early as Pericles' Funeral Oration, Thucydides, *The Complete Writings of Thucydides - The Peloponnesian War*, sec. II. 37, at 104 (1951).

After a petitioner makes a *prima facie* showing it meets the requirements of CPLR 7002(c) (requiring petitioner to state that the person is “detained” and the “nature of the illegality”), the court must issue the writ, or show cause order, without delay. CPLR 7003(a). The burden then shifts to the respondents to present facts that show the detention is lawful. CPLR 7006(a). The respondents’ return must:

[f]ully and explicitly state whether the person detained is or has been in the custody of the person to whom the writ is directed, the authority and cause of the detention, whether custody has been transferred to another, and the facts of and authority for any such transfer.

CPLR 7008(b). If the respondents fail to set forth the cause of and authority for the detention, the petitioner must be discharged. CPLR 7010(a). *See People ex re. Wilson v. Flynn*, 106 N.Y.S. 1141 (Sup. Ct. 1907).

As demonstrated herein, Kiko is a “person” for the purpose of a common law writ of habeas corpus because he is autonomous and self-determining and his detention is therefore unlawful. *See Somerset*, 98 Eng.Rep. 499; *Lemmon*, 20 N.Y. at 604-05, 617. *See also In re DeSanto*, 898 N.Y.S.2d 787, 789 (Sup. Ct. 2010).

5. Because Kiko is being unlawfully detained, he is entitled to immediate discharge.

An unlawfully imprisoned “person” in New York must be discharged forthwith. *People ex re. Stabile v. Warden of City Prison*, 202 N.Y. 138, 152 (1911). This may require discharging the person into the care or custody of another. Imprisoned children and incapacitated adults have been discharged from slavery, industrial training schools, mental institutions, and other unlawful imprisonments into the custody of another. Before the Civil War, children detained as slaves were discharged through common law writs of habeas corpus into another’s care. *Lemmon*, 20 N.Y. at 632 (discharged slaves included two seven-year-olds, a five-year-old, and a two-year-old); *Commonwealth v. Taylor*, 44 Mass. 72, 72-74 (1841) (seven or eight-year-old slave discharged into care of the Boston Samaritan Asylum for Indigent Children); *Commonwealth v. Aves*, 35 Mass. 193 (1836) (seven-year-old girl discharged into custody of Boston Samaritan Asylum for Indigent Children); *Commonwealth v. Holloway*, 2 Serg. & Rawle 305 (Pa. 1816)

(slave child discharged); *State v. Pitney*, 1 N.J.L. 165 (N.J. 1793) (legally manumitted child discharged).

New York courts frequently discharged free minors from industrial training schools or other detention facilities through the common law writ of habeas corpus, though they would remain subject to the custody of their parents or guardians. *People ex rel. F. v. Hill*, 36 A.D.2d 42, 46 (2d Dept. 1971) (“petition granted and relator's son ordered discharged from custody forthwith.”), *aff'd*, 29 N.Y.2d 17 (1971); *People ex rel. Silbert v. Cohen*, 36 A.D.2d 331, 332 (2d Dept. 1971) (“juveniles in question discharged”), *aff'd*, 29 N.Y. 2d 12 (1971); *People ex rel. Margolis v. Dunston*, 174 A.D.2d 516, 517 (1st Dept. 1991); *People ex rel. Kaufmann v. Davis*, 57 A.D.2d 597 (2d Dept. 1977); *People ex rel. Cronin v. Carpenter*, 25 Misc. 341, 342 (N.Y. Sup. Ct. 1898); *People ex rel. Slatzkata v. Baker*, 3 N.Y.S. 536, 539 (N.Y. Super. Ct. 1888); *In re Conroy*, 54 How. Pr. at 433-34; *People ex rel. Soffer v. Luger*, 347 N.Y.S. 2d 345, 347 (N.Y. Sup. Ct. 1973).

Minors have been discharged from mental institutions pursuant to habeas corpus into the custody of another, *People ex rel. Intner on Behalf of Harris v. Surles*, 566 N.Y.S.2d 512, 515 (Sup. Ct. 1991), as have child apprentices, *People v. Hanna*, 3 How. Pr. 39, 45 (N.Y. Sup. Ct. 1847) (ordering “discharge” of a minor unlawfully held as an apprentice upon writ of habeas corpus brought on his behalf); *In re M'Dowle*, 8 Johns 328 (Sup. Ct. 1811), and incapacitated adults, *Brevorka ex rel. Wittle v. Schuse*, 227 A.D.2d 969 (4th Dept. 1996) (elderly and ill woman showing signs of dementia); *State v. Connor*, 87 A.D.2d 511, 511-12 (1st Dept. 1982) (“elderly and apparently sick lady”); *Siveke v. Keena*, 441 N.Y.S. 2d 631 (Sup. Ct. 1981) (elderly and ill man).

That the NhRP seeks Kiko’s ultimate discharge to a primate sanctuary rather than into the wild or onto the streets of New York does not preclude him from habeas corpus relief. *See People ex rel. Brown v. Johnston*, 9 N.Y.2d 482, 485 (1961) (habeas corpus was proper remedy to test the validity of a prisoner’s transfer from a state prison to a state hospital for the insane); *People ex rel. Saia v. Martin*, 289 N.Y. 471, 477 (1943) (“that the appellant is still under a legal

commitment to Elmira Reformatory does not prevent him from invoking the remedy of habeas corpus as a means of avoiding the further enforcement of the order challenged.”) (citation omitted); *People ex rel. LaBelle v. Harriman*, 35 A.D.2d 13, 15 (3d Dept. 1970) (“Although relator is also incarcerated on the murder charge, a concededly valid detention, and this writ will not secure his freedom, *habeas corpus may be used to obtain relief other than immediate release from physical custody.*”) (emphasis added); *People ex rel. Meltsner v. Follette*, 32 A.D.2d 389, 391 (2d Dept. 1969) (“The sustaining of the writ, however, does not require absolute discharge.”) (citing *Johnston and Saia*); cf. *People ex rel. Rohrlich v. Follette*, 20 N.Y.2d 297, 302 (1967). The case at bar is exactly analogous to the relief accorded to child slaves, juveniles, and the incapacitated elderly, *supra*.

In *People ex rel. Ardito v. Trujillo*, 441 N.Y.S.2d 348, 350 (Sup. Ct. 1981), the petitioner, an adjudicated incompetent, sought a writ of habeas corpus to obtain a hearing to convert her criminal commitment to civil status. The respondent psychiatric center argued that the “availability of a writ of habeas corpus is rigidly restricted to situations in which the relator seeks absolute release from detention,” citing “cases [then] decided nearly half a century ago[.]” *Id.* The court rejected the respondent’s argument, noting that more recently, “the Court of Appeals has stated that the narrow view of the grounds for habeas corpus relief has . . . undergone a . . . change.” *Id.* (citing *People ex rel. Keitt*, 18 N.Y.2d at 273). The court held that the term “discharge” under CPLR 7010 was broad and that relief “may be other than absolute discharge.” *Id.* (citations omitted). The court made abundantly clear that the fact that the petitioner “is not seeking absolute release from detention does not function as a bar to her application for a writ of habeas corpus.” *Id.*

Habeas corpus may even be used to seek a transfer from one facility to another. See *Mental Hygiene Legal Services ex rel. Cruz v. Wack*, 75 N.Y.2d 751 (1989) (habeas corpus proper to transfer mental patient from secure facility to non-secure facility); *People ex rel. Jesse F. v. Bennett*, 242 A.D.2d 342 (2d Dept. 1997) (“habeas corpus is an appropriate mechanism for transfer”); *People ex rel. Richard S. v. Tekben*, 219 A.D.2d 609, 609 (2d Dept. 1995); *McGraw*

v. *Wack*, 220 A.D.2d 291, 293 (1st Dept. 1995); *People ex rel. Meltsner*, 32 A.D.2d at 391-92 (sustaining writ of habeas corpus and holding that “the respondent should be directed to afford the relator treatment consistent with his sentence or, if such treatment not be readily available at Green Haven Prison, to transfer the relator to a correctional institution where such treatment is available or to release him.”); *State ex rel. Henry L. v. Hawes*, 667 N.Y.S.2d 212, 217 (Co. Ct. 1997) (“this court will direct the *immediate transfer* of relator from Sunmount to a non-secure facility such as Wassaic.”) (emphasis added). Such has been the law in New York for nearly a century. Again, the Court in *Stanley* properly rejected Respondents’ argument that because the NhRP sought “their transfer to a chimpanzee sanctuary, it has no legal recourse to habeas corpus.” 16 N.Y.S.3d at 917 n.2. The Court reasoned that habeas corpus has been used to “secure [the] transfer of [a] mentally ill individual to another institution.” *Id.* (citation omitted).

As noted, the Court properly concluded that it was not bound by *Presti* because it conflicts with the First Department and Court of Appeals precedent. *Id.* (citing *McGraw*, 220 A.D.2d at 292; *Matter of MHLS*, 75 N.Y.2d 751). In *Presti*, the Fourth Department erroneously concluded that Kiko was not entitled to the relief afforded by a writ of habeas corpus, *not* because Kiko was not a “person,” but on the mistaken ground that the NhRP was neither demanding Kiko’s immediate release nor claiming that Kiko’s detention was unlawful. Instead, the court incorrectly asserted that the NhRP was merely demanding a transfer to a sanctuary, which, in the court’s opinion, was not a remedy for a common law writ of habeas corpus.

In support of this factually and legally incorrect statement, the Fourth Department cited eight cases. Each case, without exception, featured a human prison inmate who had been convicted of a crime and was subsequently attempting to utilize the writ of habeas corpus for some reason other than to procure his immediate release from prison. Each is therefore inapposite to the case at bar.

Several cases dealt exclusively with whether habeas corpus could be used merely to challenge alleged errors in parole revocation hearings. In *People ex rel. Gonzalez v. Wayne Cnty. Sheriff*, 96 A.D.3d 1698 (4th Dept. 2012), the court held that habeas corpus relief was

unavailable to a prisoner in his challenge to an administrative law judge's determination following a final parole revocation hearing. In *People ex rel. Shannon v. Khahaifa*, 74 A.D.3d 1867 (4th Dept. 2010), the prisoner sought habeas corpus on the grounds that "the determination that he violated a condition of his parole was arbitrary and capricious, and the time assessment for the violation was excessive." In both cases, the court concluded that habeas corpus should be denied where the inmates would not be entitled to release from prison even if errors were committed in connection with parole revocation.

In addition to these inapposite parole cases, the Fourth Department cited inapplicable criminal habeas corpus cases such as *People ex rel. Hall v. Rock*, 71 A.D.3d 1303, 1304 (3d Dept. 2010), which involved a prisoner's inappropriate challenge to the sufficiency of the evidence supporting his indictment. Likewise, in *People ex rel. Kaplan v. Commissioner of Correction*, 60 N.Y.2d 648, 649 (1983), the Court ruled that the inmate was not entitled to habeas corpus because the only remedy "to which he would be entitled would be a new trial or new appeal, and not a direction that he be immediately released from custody." The same was true in *People ex rel. Douglas v. Vincent*, 50 N.Y.2d 901, 903 (1980), where the Court held that "even if there were merit to the relator's contention that he was denied effective assistance of counsel at trial or on appeal he would not be entitled to habeas corpus relief because the only remedy he seeks would provide him a new trial or new appeal, and not a direction that he be immediately released from custody."

In the above cases, unlike the case at bar, the inmates were not contending that the fact of their confinement was unlawful, but rather, asserted that some procedural error occurred in their underlying trial or hearing. In the present case, the NhRP has consistently maintained that Kiko's detention is unlawful, thus entitling him to immediate release. Again, this Court recognized as much in the Second Hercules and Leo Petition. *Stanley*, 16 N.Y.S.3d at 917 n.2.

In another case relied upon in *Presti*, *People ex rel. Dawson v. Smith*, 69 N.Y.2d 689, 691 (1986), the Court of Appeals *reaffirmed* the notion that habeas corpus can be used to seek a transfer to an "institution *separate and different* in nature from the correctional facility to which

petitioner had been committed[.]” (emphasis added) (citing *Johnston*, 9 N.Y.2d 482). In distinguishing the case from *Johnston*, the Court of Appeals explained, “[h]ere, by contrast, petitioner *does not seek his release from custody in the facility*, but only from confinement in the special housing unit, a particular type of confinement within the facility which the Department of Correctional Services is expressly authorized to impose on lawfully sentenced prisoners committed to its custody[.]” *Id.* (citations omitted, emphasis added). In the case at bar, as in *Johnston* and unlike *Dawson*, the NhRP seeks the *complete discharge* of Kiko from Respondents’ custody with ultimate placement in a primate sanctuary. As noted, the NhRP’s case is analogous to the case of a juvenile, elderly person, or mentally incompetent adult who simply cannot be released onto the streets of New York following a habeas corpus determination that his or her detention is unlawful.

The Third Department in *Berrian v. Duncan*, 289 A.D.2d 655 (3d Dept. 2001) and *People ex rel. McCallister v. McGinnis*, 251 A.D.2d 835 (3d Dept. 1998), the final cases cited by the *Presti* court, relied on *Dawson* in concluding that a prisoner could not use habeas corpus to seek release from a special housing unit of a prison. For the reasons set forth in *Dawson, supra*, such a ruling has no bearing here, where the NhRP seeks complete release of Kiko from his confinement by Respondents to an environment completely “separate and different in nature” from the facility of detention.

Notwithstanding the few cases cited by the Fourth Department in *Presti*, it is established that even convicted prisoners *may* use habeas corpus to challenge their conditions of confinement without seeking immediate release. *See Johnston*, 9 N.Y.2d at 485; *People ex rel. Jesse F.*, 242 A.D.2d at 342 (“habeas corpus is an appropriate mechanism for transfer from a secure to a nonsecure facility”); *People ex rel. Kalikow on Behalf of Rosario v. Scully*, 198 A.D.2d 250, 251 (2d Dept. 1993) (“habeas corpus is available to challenge the conditions of confinement, even where immediate discharge is not the appropriate relief”); *People ex rel. Ceschini v. Warden*, 30 A.D.2d 649, 649 (1st Dept. 1968); *People ex rel. Berry v. McGrath*, 61 Misc. 2d 113, 116 (N.Y. Sup. Ct. 1969) (an “individual . . . is entitled to apply for habeas

corpus” upon a “showing of a course of cruel and unusual treatment”); *People ex rel. Rockey v. Krueger*, 306 N.Y.S.2d 359, 360 (Sup. Ct. 1969) (“Notwithstanding that relator does not contest the propriety of his confinement on the underlying charge, he may be [sic] a writ raise the issue whether restraint in excess of that permitted is being imposed upon him . . . Since the . . . relator is being held in solitary confinement and that an Orthodox Jew seeking to retain his beard would not be so held, relator is entitled to judgment requiring the respondent to release him from solitary confinement.”); *McGrath*, 61 Misc. 2d at 116 (citing *People ex rel. Smith v. LaVallee*, 29 A.D.2d 248, 250 (4th Dept. 1968) (“the issues of whether a prisoner . . . had in fact been receiving adequate psychological and psychiatric treatment during his imprisonment has been held a proper subject for habeas corpus relief”)).

However, Kiko is not a prison inmate convicted of a crime. Kiko is not attempting to utilize the writ of habeas corpus for some reason other than his immediate release from unlawful detention. Rather, Kiko is an autonomous, self-determining nonhuman who is utilizing the writ of habeas corpus to secure immediate release from imprisonment and procure for himself the greatest amount of freedom he can possibly have given the fact that, as a chimpanzee, he can neither be released directly into the wild nor onto the streets of New York State.

As a result of its misunderstanding the NhRP and its claims, as well as the law, the Fourth Department erroneously ignored two centuries of case law that the NhRP brought to its attention in which such individuals as child slaves, child apprentices, child residents of training schools, child residents of mental institutions, and mentally incapacitated adults, none of whom could be immediately released onto the streets of the State of New York any more than Kiko could, were nevertheless released from the custody of one entity and immediately transferred into the custody of another. The Third Department in *Lavery* accurately stated: “Notably, we have not been asked to evaluate the quality of Tommy’s current living conditions in an effort to improve his welfare. In fact, petitioner’s counsel stated at oral argument that it does not allege that respondents are in violation of any state or federal statutes respecting the domestic possession of wild animals[.]” 124 A.D.3d at 149 (citation omitted).

This Court properly understood what the NhRP is and the nature of the relief it is seeking. *Stanley*, 16 N.Y.S.3d at 900. As the Court noted at the outset:

Petitioner is a non-profit organization with a mission to “change the common law status of at least some nonhuman animals from mere things,’ which lack the capacity to possess any legal rights, to persons,’ who possess such fundamental rights as bodily integrity and bodily liberty, and those other legal rights to which evolving standards of morality, scientific discovery, and human experience entitle them.” (Pet., ¶¶ 11, 18; Memorandum of Law in Support of Petition [Pet. Memo. of Law] at 71 n 35; *see generally* NhRP website (www.nonhumanrightsproject.org). . . .

In accordance with its mission, petitioner commenced this litigation and has filed similar cases in several other New York courts with the goal of obtaining legal rights for chimpanzees, and ultimately for other animals.

Id. at 900-01. The Court continued:

The conditions under which Hercules and Leo are confined are not challenged by petitioner, which denies that they are relevant to the relief it seeks, and it advances no allegation that respondents are violating any federal, state or local laws by holding Hercules and Leo (Pet., ¶¶ 5, 8), nor does it “seek improved welfare for Hercules or Leo” (*id.*), or otherwise “to reform animal welfare legislation” (*id.*, ¶ 11; *see* Pet. Memo. of Law at 5). Rather, according to petitioner, the sole issue is whether Hercules and Leo may be legally detained at all.

Id. at 901.

The Fourth Department’s *Presti* ruling therefore erroneously contracted the Great Writ for both humans and chimpanzees. This contraction violated the Suspension Clause, Art. I, sec. 4, of the New York Constitution. As noted below, to the extent a statute curtails the common law of habeas corpus, it suspends the Great Writ in violation of New York Constitution, Art. 1 § 4, which provides that “[t]he privilege of a writ or order of habeas corpus shall not be suspended, unless, in case of rebellion or invasion, or the public safety requires it.” The Suspension Clause however renders not just the legislature, but the *judiciary*, equally powerless to deprive an individual of the privilege of the common law writ of habeas corpus. *Tweed*, 60 N.Y. at 591-92 (“If a court . . . may impose any sentence other than the legal statutory judgment, and deny the aggrieved party all relief except upon writ of error, it is but a judicial suspension of the writ of

habeas corpus. That writ is . . . a protection against encroachments upon the liberty of the citizen by the unauthorized acts of courts and judges.”).

The NhRP however is not challenging the conditions of Kiko’s confinement, nor is it requesting his transfer from one facility to another. Rather, the NhRP is first seeking Kiko’s immediate release from Respondents’ unlawful detention and then a decision on placement in a primate sanctuary in which his right to bodily liberty may be fully enjoyed.

E. KIKO IS A “PERSON” WITHIN THE MEANING OF THE COMMON LAW OF HABEAS CORPUS AND THEREFORE CPLR 7002(A).

1. The term “person” in Article 70 refers to its meaning at common law.

“Person” in Article 70 refers to its meaning under the New York common law of habeas corpus. This conclusion is supported by three reasons: (1) the legislature’s decision not to define “person” in Article 70; (2) the fact that the CPLR, including Article 70 in particular, solely governs procedure; and (3) if Article 70 limits the substantive common law of habeas corpus, it violates the “Suspension Clause” of the New York Constitution, Art. 1 § 4.

First, as the legislature did not define “person” in CPLR Article 70, a court must look to its common law meaning in a common law habeas corpus action. When the legislature intends to define a word in the CPLR, it does. *See* CPLR Article 105. But it neither defined “person” nor intended the word to have any meaning apart from its common law meaning. *Siveke*, 441 N.Y.S. 2d at 633 (“Had the legislature so intended to restrict the application of Article 70 of the CPLR to [infants or persons held by state] it would have done so by use of the appropriate qualifying language. A review of certain case law is further indication that the utilization of the writ is not to be so restrictively construed.”).

Generally, in New York, procedural statutes that employ undefined words refer to their common law meaning, particularly where, as here, the action is derived from the common law. *See P.F. Scheideman & Sons, Inc. v Webster Basket Co.*, 257 N.Y.S. 552, 554-55 (Sup. Ct. 1932) (otherwise undefined, “distress” and “distrain” “must be given their common law meaning”), *aff’d*, 236 A.D. 774 (4th Dept. 1932); *Drost v. Hookey*, 25 Misc. 3d 210, 212 (Dist.

Ct 2009) (as neither “tenant at will” nor licensee” were defined by Section 713(7) of the New York Property Actions and Proceedings Law, courts look to their common law definitions). This is true in other states too. *E.g.*, *State v. A.M.R.*, 147 Wash. 2d 91, 94-95 (2002) (en banc) (courts look to common law definitions of otherwise undefined word “person” to determine who may appeal certain orders); *Casto v. Casto*, 404 So. 2d 1046, 1048 (Fla. 1981) (courts look to common law definitions of otherwise undefined words “rendition” of judgment and “entry” of judgment to determine time limit in which to appeal); *Addington v. State*, 199 Kan. 554, 561 (1967) (courts look to common law definition of otherwise undefined word “venue” in habeas corpus petition).

Second, the CPLR governs only procedure and may neither abridge nor enlarge a party’s substantive rights. CPLR 102; CPLR 101. Therefore it may not abridge Kiko’s substantive common law habeas corpus rights. This necessarily includes the threshold determination of whether Kiko is a “person” within the meaning of the New York common law of habeas corpus. The *Tweed* Court emphasized, in reference to the procedural habeas corpus statute in effect at the time, that “the act needs no interpretation and is in full accord with the common law.” 60 N.Y. at 569.

Third, to the extent Article 70 limits who is a “person” able to bring a common law writ of habeas corpus, beyond the limitations of the common law itself, it violates the Suspension Clause of the New York Constitution, Art. 1 § 4, which provides that “[t]he privilege of a writ or order of habeas corpus shall not be suspended, unless, in case of rebellion or invasion, or the public safety requires it.” The Suspension Clause renders the legislature powerless to deprive an individual of the privilege of the common law writ of habeas corpus. *Hoff v. State of New York*, 279 N.Y. 490, 492 (1939). It “cannot be abrogated, or its efficiency curtailed, by legislative action . . . The remedy against illegal imprisonment afforded by this writ . . . is placed beyond the pale of legislative discretion.” *Tweed*, 60 N.Y. at 566. *See, e.g., Matter of Morhous v. Supreme Ct. of State of N.Y.*, 293 N.Y. 131, 135 (1944) (Suspension Clause means that legislature has “no power” to “abridge the privilege of habeas corpus”); *People ex rel. Sabatino*

v. *Jennings*, 246 N.Y. 258, 260 (1927) (by the Suspension Clause, “the writ of habeas corpus is preserved in all its ancient plenitude”); *People ex rel. Whitman v. Woodward*, 150 A.D. 770, 778 (2d Dept. 1912) (Suspension Clause gives habeas corpus “immunity from curtailment by legislative action”). See also *People ex rel. Bungart v. Wells*, 57 A.D. 140, 141 (2d Dept. 1901) (habeas corpus “cannot be emasculated or curtailed by legislation”); *Whitman*, 150 A.D. at 772 (“no sensible impairment of [habeas corpus] may be tolerated under the guise of either regulating its use or preventing its abuse”); *id.* at 781 (Burr, J., concurring) (“anything . . . essential to the full benefit or protection of the right which the writ is designed to safeguard is ‘beyond legislative limitation or impairment’”) (citations omitted); *Frost*, 133 A.D. at 187 (writ lies “beyond legislative limitation or impairment”).

The question of who is a “person” within the meaning of the common law of habeas corpus is the most important individual issue that may come before a court. If Article 70 interferes with a court’s ability to determine whether Kiko is a “person” within the meaning of the common law of habeas corpus, it violates the Suspension Clause. Otherwise the legislature could permanently strip judges of their ability to determine who lives, who dies, who is enslaved, and who is free.

“Person” is not defined in CPLR article 70, or by the common law of habeas corpus. Petitioner agrees that there exists no legal precedent for defining “person” under article 70 or the common law to include chimpanzees or any other nonhuman animals, or that a writ of habeas corpus has ever been granted to any being other than a human being. Nonetheless, as the Third Department noted in *People ex rel Nonhuman Rights Project, Inc. v. Lavery*, *the lack of precedent does not end the inquiry into whether habeas corpus relief may be extended to chimpanzees.* (124 A.D.3d 148, 150–151, 998 N.Y.S.2d 248 [3d Dept 2014]).

Stanley, 16 N.Y.S.3d at 911 (emphasis added).

Kiko’s legal thinghood derives from the common law. However, when justice requires, New York courts refashion the common law—especially the common law of habeas corpus—with the directness Lord Mansfield displayed in *Somerset v. Stewart*, when he held human slavery “so odious that nothing can be suffered to support it but positive law.” Lofft at 19; 98 Eng. Rep. at 510 (emphasis added). “One of the hallmarks of the writ [is] . . . its great flexibility

and vague scope.” *McCann*, 18 N.Y.2d at 263 (citation omitted). Slaves employed the common law writ of habeas corpus to challenge their imprisonment as things. *Lemmon*, 20 N.Y. at 604-06, 618, 623, 630-31 (citing *Somerset*); *In re Belt*, 2 Edm. Sel. Cas. 93 (Sup. Ct. 1848); *In re Kirk*, 1 Edm. Sel. Cas. 315 (citing *Somerset* and *Forbes v. Cochran*, 107 Eng. Rep. 450, 467 (K.B. 1824)); *In re Tom*, 5 Johns. 365 (*per curiam*). Non-slaves long employed it in New York, including (1) apprentices and indentured servants, *e.g.*, *People v. Weissenbach*, 60 N.Y. 385, 393 (1875); *In re M'Dowle*, 8 Johns. 328; (2) infants, *Weissenbach*; *M'Dowle*; (3) the incompetent elderly, *Schuse*, 227 A.D.2d 969; and (4) mental incompetents, *Johnston*, 9 N.Y.2d at 485; *Bennett*, 242 A.D.2d 342; *In re Cindy R.*, 970 N.Y.S.2d 853 (Sup. Ct. 2012).

It is not just in the area of habeas corpus that the New York courts freely revise the common law when justice requires, though habeas corpus law is the broadest and most flexible of all. The Court of Appeals has long rejected the claim that “change . . . should come from the Legislature, not the courts.” *Woods v. Lancet*, 303 N.Y. 349, 355 (1951). *See W.J.F. Realty Corp. v. State*, 672 N.Y.S.2d 1007, 1009 (Sup. Ct. 1998) (“For those who feel that the incremental change allowed by the Common Law is too slow compared to statute, we refer those disbelievers to the holding in *Somerset v. Stewart*, . . . which stands as an eloquent monument to the fallacy of this view”), *aff'd*, 267 A.D.2d 233 (2d Dept. 1999). “We abdicate our own function, in a field peculiarly nonstatutory, when we refuse to reconsider an old and unsatisfactory court-made rule” the Court in *Woods* declared. 303 N.Y. at 355. *See also Flanagan v. Mount Eden General Hosp.*, 24 N.Y. 2d 427, 434 (1969) (“we would *surrender our own function* if we were to refuse to deliberate upon unsatisfactory court-made rules simply because a period of time has elapsed and the legislature has not seen fit to act”) (emphasis added); *Greenburg v. Lorenz*, 9 N.Y. 2d 195, 199-200 (1961) (“Alteration of the law [when the legislature is silent] has been the business of the New York courts for many years.”).

The common law is “lawmaking and policymaking by judges . . . in principled fashion, to fit a changing society.” Judith S. Kaye, *supra*, at 729. In response to the question in *Woods* whether the Court should bring “the common law of this state, on this question [of whether an

infant could bring suit for injuries suffered before birth] into accord with justice[.]” it answered: “we should make the law conform to right.” 303 N.Y. at 351. The Court of Appeals has explained that “Chief Judge Cardozo’s preeminent work *The Nature of Judicial Process* captures our role best if judges have woefully misinterpreted the *mores* of their day, or if the *mores* of their day are no longer those of ours, they ought not to tie, in helpless submission, the hands of their successors.” *Caceci v. Do Canto, Const. Corp.*, 72 N.Y.2d 52, 60 (1988) (citing Cardozo, *Nature of Judicial Process*, at 152).

Therefore, in New York, “[w]hen the ghosts of the past stand in the path of justice clanking their mediaeval chains the proper course for the judge is to pass through them undeterred.’ [The Court] act[s] in the finest common-law tradition when [it] adapt[s] and alter[s] decisional law to produce common-sense justice.” *Woods*, 303 N.Y. at 355 (quoting *United Australia, Ltd., v. Barclay's Bank, Ltd.*, (1941) A.C. 1, 29). New York courts have “*not only the right, but the duty to re-examine a question where justice demands it*” to “bring the law into accordance with present day standards of wisdom and justice rather than ‘with some outworn and antiquated rule of the past.’” *Id.* (emphasis added) (quoting *Funk v. United States*, 290 U.S. 371, 382 (1933)). *See, e.g., Gallagher v. St. Raymond's R.C. Church*, 21 N.Y.2d 554, 558 (1968) (“the common law of the State is not an anachronism, but is a living law which responds to the surging reality of changed conditions”); *Millington v. Southeastern Elevator Co.*, 22 N.Y.2d 498, 508 (1968) (“No recitation of authority is needed to indicate that this court has not been backward in overturning unsound precedent.”); *Bing v. Thunig*, 2 N.Y.2d 656, 668 (1957) (a rule of law “out of tune with the life about us, at variance with modern day needs and with concepts of justice and fair dealing . . . [i]t should be discarded”); *Silver v. Great American Ins. Co.*, 29 N.Y.2d 356, 363 (1972) (“Stare decisis does not compel us to follow blindly a court-created rule . . . once we are persuaded that reason and a right sense of justice recommend its change.”); *MacPherson v. Buick Motor Company*, 217 N.Y. 382, 391 (1916) (legal principles “are whatever the needs of life in a developing civilization require them to be”); *Rumsey v. New York and New England Railway Co.*, 133 N.Y. 79, 85 (1892) (quoting 1 *Kent's Commentaries* 477 (13th edition

1884) (“cases ought to be examined without fear, and revised without reluctance, rather than to have the character of our law impaired, and the beauty and harmony of the system destroyed by the perpetuity of error”).

2. As Kiko is autonomous and self-determining, he is a common law “person” entitled to the common law right to bodily liberty that the common law of habeas corpus protects.

“Anglo-American law starts with the premise of thorough-going self determination.”

Natanson v. Kline, 186 Kan. 393, 406 (1960), *decision clarified on den. of reh'g*, 187 Kan. 186 (1960). The United States Supreme Court famously held that

[n]o right is held more sacred, or is more carefully guarded, by the common law, than the right of every individual to the possession and control of his own person, free from all restraint or interference of others, unless by clear and unquestionable authority of law. . . . “The right to one's person may be said to be a right of complete immunity: to be let alone.”

Botsford, 141 U.S. at 251 (quoting *Cooley on Torts* 29).

The word “autonomy” derives from the Greek “autos” (“self”) and “nomos” (law”). Michael Rosen, *Dignity – Its History and Meaning* 4-5 (2012). See *State v. Perry*, 610 So. 2d 746, 767 (La. 1992) (“The retributory theory of punishment presupposes that each human being possesses autonomy, a kind of rational freedom which entitles him or her to dignity and respect as a person which is morally sacred and inviolate.”). Its deprivation is a deprivation of common law dignity, *People v. Rosen*, 81 N.Y. 2d 237, 245 (1993); *Rivers v. Katz*, 67 N.Y.2d 485, 493 (1986); *In re Gabr*, 39 Misc. 3d 746, 748 (Sup. Ct. 2013), that “long recognized the right of competent individuals to decide what happens to their bodies.” *Grace Plaza of Great Neck, Inc. v. Elbaum*, 82 N.Y.2d 10, 15 (1993). See, e.g., *Matter of M.B.*, 6 N.Y.3d 437, 439 (2006); *Rivers*, 67 N.Y.2d at 492; *Schloendorff v. Soc'y of N.Y. Hosp.*, 211 N.Y. 125, 129-30 (1914).³¹

New York common law so supremely values autonomy that it permits competent adults to decline life-saving treatment. *Matter of Westchester Cnty. Med. Ctr. (O'Connor)*, 72 N.Y.2d

³¹ This common law right under New York law is coextensive with the liberty interest protected by the Due Process Clause of the New York Constitution. *Matter of Fosmire v. Nicoleau*, 75 N.Y.2d 218, 226 (1990); *Rivers*, 67 N.Y.2d at 493.

517, 526-28 (1988); *Rivers*, 67 N.Y.2d. at 493; *People v. Eulo*, 63 N.Y. 2d 341, 357 (1984); *Matter of Storar*, 52 N.Y.2d 363, 378 (1981), *cert. denied*, 454 U.S. 858 (1981). This “insure[s] that the greatest possible protection is accorded his autonomy and freedom from unwanted interference with the furtherance of his own desires.” *Rivers*, 67 N.Y.2d at 493. It guarantees the right to defend oneself against criminal charges without counsel. *Matter of Kathleen K.*, 17 N.Y.3d 380, 385 (2011). It permits a permanently incompetent, once-competent human to refuse medical treatment, if he clearly expressed his desire to refuse treatment before incompetence silenced him, and no over-riding state interest exists. *Matter of Storar*, 52 N.Y.2d at 378. Even the never-competent—severely mentally retarded, the severely mentally ill, and the permanently comatose—who will never be competent, lack the ability, have always lacked the ability, and always will lack the ability, to choose, understand, or make a reasoned decision about medical treatment possess common law autonomy and dignity equal to the competent. *Matter of M.B.*, 6 N.Y.3d at 440; *Rivers*, 67 N.Y.2d at 493 (citing *Superintendent of Belchertown State Sch. v. Saikewicz*, 373 Mass. 728 (1977)); *Matter of Storar*, 52 N.Y.2d at 380; *Delio v. Westchester Cnty. Med. Ctr.*, 129 A.D.2d 1, 13-14 (2d Dept. 1987); *Matter of Mark C.H.*, 28 Misc. 3d 765, 775 n.25 (Sur. Ct. 2010) (quoting *Saikewicz*, 373 Mass. at 746); *In re New York Presbyterian Hosp.*, 181 Misc. 2d 142, 151 n.6 (Sup. Ct. 1999).³²

Chimpanzees’ capacities for autonomy and self-determination, which subsume many of their numerous complex cognitive abilities, as set forth in the original Expert Affidavits and certain of the Supplemental Affidavits, include possession of an autobiographical self, episodic memory, self-consciousness, self-knowingness, self-agency, referential and intentional communication, empathy, a working memory, language, metacognition, numerosity, and material, social, and symbolic culture, their ability to plan, engage in mental time-travel,

³² “[I]t is inconsistent with our fundamental commitment to the notion that no person or court should substitute its judgment as to what would be an acceptable quality of life for another.” *O’Connor*, 72 N.Y. 2d. at 530. *But see id.* at 537 (Hancock, J. concurring) (criticizing *Storar* as it “ties the patient’s right of self-determination and privacy solely to past expressions of subjective intent”); *id.* at 540-41 (Simons, J., dissenting) (criticizing *Storar’s* refusal to adopt a substituted judgment rule). In 2002, the legislature adopted a substituted judgment rule, SCPA 1750(2).

intentional action, sequential learning, mediational learning, mental state modeling, visual perspective-taking, cross-modal perception; their ability to understand cause-and-effect and the experiences of others, to imagine, imitate, engage in deferred imitation, emulate, to innovate and to use and make tools.

In June 2013, the NIH recognized the ability of chimpanzees to choose and self-determine. Accepted Recommendation EA7 states: “The environmental enrichment program developed for chimpanzees must provide for relevant opportunities for *choice and self determination.*” (Wise Aff. Ex. A, p. 11) (*Stanley*) (emphasis added). The NIH noted “[a] large number of commenters who responded to this topic strongly supported this recommendation as a way to ensure both the complexity of the captive environment and chimpanzees’ ability to *exercise volition with respect to activity, social grouping, and other opportunities.*” (*Id.*) (emphasis added).

Autonomous, self-determined, able to choose how to live his life, Kiko is entitled to common law personhood and the common law right to bodily liberty protected by New York common law habeas corpus.

3. Kiko is entitled to the common law equality right to bodily liberty that the common law of habeas corpus protects.

Kiko is entitled to common law personhood and the right to bodily liberty as a matter of common law equality, too. Equality has always been a vital New York value, embraced by constitutional law, statutes, and common law.³³ Article 1, § 11 of the New York Constitution

³³ Equality is a fundamental value throughout Western jurisprudence. *See Vriend v. Alberta*, 1 R.C.S. 493, 536 (Canadian Supreme Court 1998) (Cory and Iacobucci, JJ) (“The concept and principle of equality is almost intuitively understood and cherished by all.”); *Miller v. Minister of Defence*, HCJ 4541/94, 49(4) P.D. 94, ¶6 (Israel High Court of Justice 1995) (Strasberg-Cohen, T., J.) (“It is difficult to exaggerate the importance and stature of the principle of equality in any free democratic society.”); *Israel Women’s Network v. Government*, HCJ 453/94, 454/94, ¶22 (Israel High Court of Justice 1994) (“The principle of equality, which . . . ‘is merely the opposite of discrimination’ . . . has long been recognized in our law as one of the principles of fairness and justice which every public authority is commanded to withhold.”) (citation omitted); *Mabo v. Queensland* (no. 2), 175 CLR 1 F.C. 92-014, ¶29 (Australian Supreme Court 1992) (“equality before the law . . . is [an] aspiration[] of the contemporary Australian legal system”). *See also* Alexis de Toqueville, *Democracy in America*, Book II, Chapter 1, at 65 (Digireads.com Publishing 2007) (“Democratic nations are at all times fond of equality . . . for equality their passion is ardent, insatiable, incessant, invincible; they call for equality in freedom; and if they cannot obtain that, they still

contains both an Equal Protection Clause, modeled on the Fourteenth Amendment to the United States Constitution, and an anti-discrimination clause. “[T]he principles expressed in those sections [of the Constitution] were hardly new.” *Brown v. State*, 89 N.Y.2d 172, 188 (1996). As the Court of Appeals explained:

The Equal Protection Clause of the Fourteenth Amendment had been thoroughly debated and adopted by Congress and ratified by our Legislature after the Civil War, and the concepts underlying it are older still. Indeed, cases may be found in which this Court identified a prohibition against discrimination in the Due Process Clauses of earlier State Constitutions, clauses with antecedents traced to colonial times (*see* [citation omitted] Charter of Liberties and Privileges, 1683, § 15, reprinted in 1 Lincoln, Constitutional History of New York, at 101).

Id.

New York equality values are embedded into New York common law. For example, under the common law, such private entities as common carriers, victualers, and innkeepers may not discriminate unreasonably or unjustly. *See, e.g., Hewitt v. New York, N.H. & H.R. Co.*, 284 N.Y. 117, 122 (1940) (quoting *Root v. Long Island R. Co.*, 114 N.Y. 300, 305 (1889) (“At common law, railroad carriers are under a duty to serve all persons without unjust or unreasonable advantage to any. So this court has said that a carrier should not ‘be permitted to unreasonably or unjustly discriminate against other individuals to the injury of their business where the conditions are equal.’”)); *New York Tel. Co. v. Siegel-Cooper Co.*, 202 N.Y. 502, 508 (1911) (quoting *Lough v. Outerbridge*, 143 N.Y. 271, 278 (1894) (“‘His charges must, therefore, be reasonable, and he must not unjustly discriminate against others.’”)); *People v. King*, 110 N.Y. 418, 427 (1888) (“By the common law, innkeepers and common carriers are bound to furnish equal facilities to all, without discrimination, because public policy requires them so to do.”).

The common-law duty-to-serve on a non-discriminatory basis doctrine is concerned with two distinct yet overlapping interests: equality and autonomy.

The origins of the duty to serve and the recent direction of the case law suggest that a basic concern for individual autonomy animates the duty to serve. This concern recognizes the vulnerability of individuals to the arbitrary and

call for equality in slavery.”); United States Declaration of Independence (July 4, 1776) (“all men are created equal”).

unreasonable power of private entities. Realizing the importance to the individual of some goods, services, and associations, the duty to serve seeks to limit the power of the controlling entities by allowing exclusion only when based on fair and reasonable grounds.

Note, *The Antidiscrimination principle in the Common Law*, 102 HARVARD L. REV. 1993, 2001 (1989) (discussing the values underlying the antidiscrimination principle in the common law and concluding that the interests in equality often override property interests). Common law equality, which forbids discrimination founded on unreasonable means or unjust ends, also prohibits racial discrimination, and New York “has led in the proclamation and extension of its liberal policy favoring equality and condemning [racial] discrimination.” *In re Young*, 211 N.Y.S 2d 621, 626 (Sup. Ct. 1961).

The Expert Affidavits demonstrate that genetically, physiologically, and psychologically, Kiko’s interests in exercising his autonomy and self-determination is as fundamental to him as it is to a human being. Recall the United States Supreme Court’s admonition that “[n]o right is held more sacred, or is more carefully guarded, by *the common law*, than the right of every individual to the possession and control of his own person[.]” *Botsford*, 141 U.S. at 251 (emphasis added).³⁴

However, New York equality is not merely a product of its constitutions, statutes, and common law operating independently. Two decades ago, Chief Justice Kaye confirmed that the two-way street between common law decision-making and constitutional decision-making had resulted in a “common law decision making infused with constitutional values.” Judith S. Kaye, *supra*, at 747. In harmony with the common law equality principles that forbid private discrimination founded on unreasonable means or unjust ends, the common law of equality embraces, at a minimum, its sister fundamental constitutional equality value—embedded within the New York and the United States Constitutions—that prohibits discrimination based on irrational means or illegitimate ends. *Romer v. Evans*, 517 U.S. 620, 633 (1996) (quoting *Sweatt*

³⁴ On this ground alone, this Court must eventually hold (after it issues the Order to Show Cause) that, as a matter of common law equality, Kiko is entitled to bodily liberty, and his right is protected by the common law of habeas corpus.

v. *Painter*, 339 U.S. 629, 635 (1950) (“Equal protection of the laws is not achieved through indiscriminate imposition of inequalities.”)).³⁵

Common law equality decision-making differs from constitutional equal protection decision-making in that it has nothing to do with a “respect for the separation of powers.” *Cleburne v. Cleburne Living Ctr., Inc.*, 473 U.S. 432, 441-42 (1985). Instead it applies constitutional equal protection values to an evolving common law. The outcomes of similar common law and constitutional cases may therefore be different.

For example, in *Hernandez v. Robles*, 7 N.Y.3d 338 (2006), the Court of Appeals affirmed the constitutionality of New York’s statutory limitation of marriage to opposite-sex couples. “The critical question [wa]s whether a rational legislature could decide that these benefits should be given to members of opposite-sex couples, but not same-sex couples.” *Id.* at 358. The Court held the legislature could rationally conclude that same-sex relationships are more casual or temporary, to the detriment of children, and assume children do best with a mother and father. *Id.* at 359-60. In the face of a dissent that concluded, “I am confident that future generations will look back on today’s decision as an unfortunate misstep,” *id.* at 396 (Kaye, C.J., dissenting), the majority “emphasize[d] . . . we are deciding only this constitutional question. *It is not for us to say whether same-sex marriage is right or wrong.*” *Id.* at 366 (emphasis added).

In contrast, a classification’s appropriateness is important to a court deciding the common law. It *should* decide what is right and wrong. Its job *is* to do the “right thing.” Thus, when it is time for the Court to rule on the merits, the Court *should* recognize Kiko’s common law personhood. This Court *should* determine that the classification of a chimpanzee as a “legal thing” invokes an illegitimate end. This Court *should* decide that Kiko has a common law right to bodily liberty sufficient to entitle him to a writ of habeas corpus and a chance to live the autonomous, self-determining life of which he is capable.

³⁵ The New York Equal Protection Clause “is no broader in coverage than the federal provision.” *Under 21, Catholic Home Bur. for Dependent Children v. City of New York*, 65 N.Y.2d 344, 360 n.6 (1985).

Kiko's common law classification as a "legal thing," unable to possess any legal rights, rests upon an illegitimate end. *Affronti v. Crosson*, 95 N.Y.2d 713, 719 (2001). See, e.g., *Goodridge v. Dep't of Public Health*, 440 Mass. 309, 330 (2003); *Cleburne*, 473 U.S. at 452 (Stevens, J., concurring).

Without such a requirement of legitimate public purpose it would seem useless to demand even the most perfect congruence between means and ends, for each law would supply its own indisputable - and indeed tautological fit: if the means chosen burdens one group and benefits others, then the means perfectly fits the end of burdening just those whom the law disadvantage and benefitting just those it assists.

Laurence H. Tribe, *American Constitutional Law* 1440 (second ed. 1988).

In *Romer*, the United States Supreme Court struck down the so-called "Amendment 2," because its purpose of repealing all existing anti-discrimination positive law based upon sexual orientation, was illegitimate. 517 U.S. at 626. It violated equal protection because "[i]t is at once too narrow and too broad. It identifies persons by a single trait and then denies them protection across the board." *Id.* at 633 (emphasis added). This statute was "simply so obviously and fundamentally inequitable, arbitrary, and oppressive that it literally violated basic equal protection values." *Equal. Found. of Greater Cincinnati, Inc. v. City of Cincinnati*, 128 F.3d 289, 297 (6th Cir. 1997), cert. denied, 525 U.S. 943 (1998) (emphasis added). See *Mason v. Granholm*, 2007 WL 201008 (E.D. Mich. 2007) (noting that *Romer* found that Colorado's Amendment 2 was "at once too narrow and too broad. It identifies persons by a single trait and then denies them protection across the board," the Court struck down an amendment to the Michigan Civil Rights Act that prevented prisoners from suing for a violation of their civil rights while imprisoned as violating federal equal protection); *Goodridge*, 440 Mass. at 330 (same-sex marriage ban impermissibly "identifies persons by a single trait and then denies them protection across the board").

As it would be a tautology for the Equal Protection Clause to fail to demand that a legitimate public purpose or set of purposes based on some conception of the general good be the legislative end, it would be a tautology to determine whether class members are similarly

situated for all purposes. The true test is “whether they are similarly situated *for purposes of the law challenged.*” *Kerrigan v. Comm’r of Public Health*, 289 Conn. 135, 158 (2008) (emphasis added) (quoting *Stuart v. Comm’r of Correction*, 266 Conn. 596, 601-02 (2003)).

Denying Kiko his common law right to bodily liberty solely because he is a chimpanzee is a tautology. “[S]imilarly situated’ [cannot] mean simply ‘similar in the possession of the classifying trait.’ All members of any class are similarly situated in this respect and consequently, any classification whatsoever would be reasonable by this test.” *Varnum v. O’Brien*, 763 N.W. 2d 862, 882-83 (Iowa 2009) (citations omitted). The “equal protection guarantee requires that laws treat all those who are similarly situated with respect to the purposes of law alike.” *Id.* In *Goodridge*, the Supreme Judicial Court of Massachusetts swept aside the argument that the legislature could refuse homosexuals the right to marry because the purpose of marriage is procreation, which they could not accomplish. 440 Mass. at 330. This argument “singles out the one unbridgeable difference between same-sex and opposite sex couples, and transforms that difference into the essence of legal marriage.” *Id.* at 333. No one doubts that, if Kiko were human, this Court would instantly issue a writ of habeas corpus and discharge him immediately. Kiko is imprisoned for one reason: he is a chimpanzee. Possessing that “single trait,” [he is]“denie[d] . . . protection across the board,” *Romer*, 517 U.S. at 633, to which his autonomy and ability to self-determine entitle him.

The great Yale historian of slavery, David Brion Davis, has written that human slaves were “animalized” to justify their brutal treatment and that “[t]he animalization of humans first required the ‘animalization’ of animals.” David Brion Davis, *The Problem of Slavery in the Age of Emancipation*, 23 (2014). This required human “anthropodenial . . . a blindness to the humanlike characteristics of other animals, or the animal-like characteristics of ourselves.” *Id.* at 24.

All nonhuman animals were once believed unable to think, believe, remember, reason, and experience emotion. Richard Sorabji, *Animal Minds & Human Morals – The Origins of the Western Debate* 1-96 (1993). Today, not only do the Expert Affidavits and the June 13, 2013

NIH acceptance of The Working Group on the Use of Chimpanzees in NIH-Supported Research within the Council of Councils' Recommendation confirm chimpanzees' extraordinarily complex, often human-like, autonomy and ability to self-determine and expose those ancient, pre-Darwinian prejudices as untrue, but so does the 2011 report of the Institute of Medicine and National Research Council of the National Academies discussing the use of chimpanzees in biomedical research:

Chimpanzees live in complex social groups characterized by considerable interindividual cooperation, altruism, deception, and cultural transmission of learned behavior (including tool use). Furthermore, laboratory research has demonstrated that chimpanzees can master the rudiments of symbolic language and numericity, that they have the capacity for empathy and self-recognition, and that they have the human-like ability to attribute mental states to themselves and others (known as the "theory of mind"). Finally, in appropriate circumstances, chimpanzees display grief and signs of depression that are reminiscent of human responses to similar situations.³⁶

The Expert Affidavits attached to this Second Kiko Petition were submitted by some of the world's greatest natural scientists. They confirm chimpanzees' extraordinarily complex, often human-like, autonomy and ability to self-determine. At every level, chimpanzees are today understood as beings entitled to extraordinary consideration; they have been edging toward personhood.

For centuries New York courts have rejected slavery, the essence of which is a stripping the slave of her autonomy and harnessing it to the will of the master. *See Jack v. Martin*, 14 Wend. 507, 533 (N.Y. 1835) ("Slavery is abhorred in all nations where the light of civilization and refinement has penetrated, as repugnant to every principle of justice and humanity, and deserving the condemnation of God and man"). The famous *Lemmon* case, 20 N.Y. 562, is acknowledged as "one of the most extreme examples of hostility to slavery in Northern courts[.]" Paul Finkleman, *Slavery in the Courtroom* 57 (1985). In *Stanley*, the Court noted that "'times can blind us to certain truths and later generations can see that laws once thought necessary and

³⁶ *Chimpanzees in Biomedical and Behavioral Research - Assessing the Necessity* 27 (Bruce M. Altevogt, et. al, eds., The National Academies Press 2011).

proper in fact serve only to oppress.” 16 N.Y.S.3d at 917-18 (quoting *Lawrence v. Texas*, 539 U.S. 558, 579 (2003)). The legal personhood of chimpanzees, at least with respect to their right to a common law writ of habeas corpus, is one of those truths; their legal thinghood has become an anachronism.³⁷

Humans who have never been sentient or conscious or possessed of a brain *should* have basic legal rights. But *if* humans bereft even of sentience are entitled to personhood, *then* this Court must either recognize Kiko’s just equality claim to bodily liberty or reject equality. Abraham Lincoln understood that the act of extending equality protects it: “[i]n *giving* freedom to the slave, we *assure* freedom to the free, honorable alike in what we give, and what we preserve.” 5 *Collected Works of Abraham Lincoln* 537 (Roy P. Basler, ed. 1953) (annual message to Congress of December 1, 1862) (emphasis in original). The act of denying equality in order to enslave, based on a single trait, jeopardizes the equality of all.

The NhRP claims only that Kiko has a common law right to bodily liberty protected by the common law of habeas corpus. What, if any, other common law rights Kiko possesses will be determined on a case-by-case basis. In *Byrn*, the Court of Appeals noted that fetuses are “persons” for some purposes in New York, including inheritance, devolution of property, and wrongful death, while not being “persons in the law in the whole sense,” such as being subject to abortion. 31 N.Y.2d at 200. Equal protection

can only be defined by the standards of each generation. *See* Cass R. Sunstein, *Sexual Orientation and the Constitution: A Note on the Relationship Between Due Process and Equal Protection*, 55 U. CHI. L.REV. 1161, 1163 (1988) (“[T]he Equal Protection Clause looks forward, serving to invalidate practices that were widespread at the time of its ratification and that were expected to endure.”). The

³⁷ As of February 2014, at least twenty-five large private research companies, including GlaxoSmithKline, PLC, Merck & Co., Inc., DuPont, AstraZeneca, PLC, Colgate-Palmolive Company, and Novo Nordisk have committed not to use chimpanzees in research. The Humane Society of the United States, “Companies with Invasive Chimpanzee Research Policies” (February 24, 2014), available at http://www.humanesociety.org/issues/chimpanzee_research/tips/companies_chimpanzee_policies.html#Uwz6CvldWSo (last viewed December 28, 2015). The Board of Editors of *Scientific American* has called for the end of captivity for such cognitively complex nonhuman animals as great apes, cetaceans, and elephants. “Free Willy – And His Pals,” *Scientific American* 10 (March 2014).

process of defining equal protection . . . begins by classifying people into groups. A classification persists until a new understanding of equal protection is achieved. The point in time when the standard of equal protection finally takes a new form is a product of the conviction of one, or many, individuals that a particular grouping results in inequality and the ability of the judicial system to perform its constitutional role free from the influences that tend to make society's understanding of equal protection resistant to change.

Varnum, 763 N.W. 2d at 877-78.

4. The New York legislature has already determined that some nonhuman animals are persons in the trust context.

New York *already* recognizes personhood rights in some nonhuman animals, including Kiko. Specifically, New York is among the states that allow nonhuman animals to be trust “beneficiaries.” See EPTL 7-8.1. *Stanley*, 16 N.Y.S.3d at 901 (noting that the statute provides “that a domestic or pet animal may be named as a beneficiary of a trust.”). Kiko is a beneficiary of an *inter vivos* trust created by the NhRP pursuant to EPTL 7-8.1 for the purpose of his care and maintenance.³⁸ Consequently, he is a “person” under that statute, as only “persons” may be trust beneficiaries. *Lenzner v. Falk*, 68 N.Y.S.2d 699, 703 (Sup. Ct. 1947); *Gilman v. McArdle*, 65 How. Pr. 330, 338 (N.Y. Super. 1883) (“Beneficiaries may be natural or artificial persons, but they must be persons . . . In general, any person who is capable in law of taking an interest in property, may, to the extent of his legal capacity, and no further, become entitled to the benefits of the trust.”), *rev'd on other grounds*, 99 N.Y. 451 (1885). “Before this statute [EPTL 7-8.1] trusts for animals were void, because a private express trust cannot exist without a beneficiary capable of enforcing it, and because nonhuman lives cannot be used to measure the perpetuities period.” Margaret Turano, *Practice Commentaries*, N.Y. Est. Powers & Trusts Law 7-8.1 (2013). See *In re Mills' Estate*, 111 N.Y.S.2d 622, 625 (Sur. Ct. 1952); *In re Estate of Howells*, 260 N.Y.S. 598, 607 (Sur. Ct. 1932). New York did not even recognize honorary trusts for nonhuman animals, which lack beneficiaries. *In re Voorhis' Estate*, 27 N.Y.S.2d 818, 821 (Sur. Ct. 1941).

³⁸ A true and correct copy of the trust is attached to the Second Kiko Petition as Exhibit 10.

In 1996, the Legislature enacted EPTL 7-6 (now EPTL 7-8) (a), which permitted “domestic or pet animals” to be designated as trust beneficiaries.³⁹ This section thereby acknowledged these nonhuman animals as “persons” capable of possessing legal rights. Accordingly, in *In re Fouts*, 677 N.Y.S.2d 699 (Sur. Ct. 1998), the court recognized that five chimpanzees were “income and principal beneficiaries of the trust” and referred to its chimpanzees as “beneficiaries” throughout. In *Feger v. Warwick Animal Shelter*, 59 A.D.3d 68, 72 (2d Dept. 2008), the Appellate Division observed “[t]he reach of our laws has been extended to animals in areas which were once reserved only for people. For example, the law now recognizes the creation of trusts for the care of designated domestic or pet animals upon the death or incapacitation of their owner.”

In 2010, the legislature renumbered EPTL 7-6.1 as EPTL 7-8.1, removed “Honorary” from the statute’s title, “Honorary Trusts for Pets,” leaving it to read, “Trusts for Pets,”⁴⁰ and amended section (a) to read, in part: “A trust for the care of a designated domestic or pet animal is valid. . . . *Such trust shall terminate when the living animal beneficiary or beneficiaries of such trust are no longer alive.*” (emphasis added). In removing “Honorary” and the twenty-one year limitation on trust duration, the legislature dispelled any doubt that a nonhuman animal was capable of being a trust beneficiary in New York. By allowing “designated domestic or pet animals” to be trust beneficiaries able to own the trust corpus, New York recognized these nonhuman animals as “persons” with the capacity for legal rights.

This Court agreed with the NhRP’s interpretation of the pet trust statute in the *Stanley* case. The Court explained:

³⁹ The Sponsor’s Memorandum attached to the bill that became EPTL 7-6.1 (and now EPTL 7-8.1) stated the statute’s purpose was “to allow animals to be made the beneficiary of a trust.” Sponsor’s Mem. NY Bill Jacket, 1996 S.B. 5207, Ch. 159. The Senate Memorandum made clear the statute allowed “such animal to be made the beneficiary of a trust.” Mem. of Senate, NY Bill Jacket, 1996 S.B. 5207, Ch. 159.

⁴⁰ The Committee on Legal Issues Pertaining to Animals of the Association of the Bar of the City of New York’s report to the legislature stated, “we recommend that the statute be titled ‘Trusts for Pets’ instead of ‘Honorary Trusts for Pets,’ as honorary means unenforceable, and pet trusts are presently enforceable under subparagraph (a) of the statute.” N.Y. Bill Jacket, 2010 A.B. 5985, Ch. 70 (2010).

Moreover, some animals, such as pets and companion animals, are gradually being treated as more than property, if not quite as persons, . . . (See generally *Feger v. Warwick Animal Shelter*, 59 A.D.3d 68, 71–72, 870 N.Y.S.2d 124 [2d Dept 2008] [“Companion animals are a special category of property” and courts recognize their “cherished status”]; see also *People v. Garcia*, 29 A.D.3d 255, 812 N.Y.S.2d 66 [1st Dept 2006] [goldfish are companion animals protected by animal cruelty law]; *Raymond v. Lachmann*, 264 A.D.2d 340, 341, 695 N.Y.S.2d 308 [1st Dept 1999] [recognizing cherished status of pets and considering cat's interests by awarding possession of her to defendant as “best for all concerned,” notwithstanding plaintiff's actual ownership interest]; *Travis v. Murray*, 42 Misc.3d 447, 977 N.Y.S.2d 621 [Sup Ct, New York County 2013] [recognizing, in dispute over custody of dog in divorce proceeding, that dogs are seen as family members, and declining to apply strict property analysis, applying something akin to “best interests of the child” standard]). At least one New York court, recognizing that “a pet is not just a thing but occupies a special place somewhere in between a person and a piece of personal property,” found that a dog's owner may be entitled to emotional distress damages for the wrongful destruction and loss of her dog, thereby departing from contrary precedent. (*Corso v. Crawford Dog & Cat Hosp., Inc.*, 97 Misc.2d 530, 531, 415 N.Y.S.2d 182 [Civ Ct, Queens County 1979]; . . .

Consonant with these recent trends, New York enacted section 7–8.1 (“Trusts for pets”) of the Estates, Powers and Trusts Law (EPTL), providing that a domestic or pet animal may be named as a beneficiary of a trust. (Pet. Memo. of Law, at 54–56; see McKinley, *Dog-Related Bills Flood Albany as Major Legislation Stalls*, New York Times, June 11, 2015, http://www.nytimes.com/2015/06/12/nyregion/dog-related-bills-floodalbany-as-major-legislation-stalls.html?_r=0 [noting that dogs' interests “are exceptionally well represented in Albany this year.”]).

Some commentators have described the current legal status of animals as “quasi-persons, being recognized as holding some rights and protections but not others.” (Eg, Matambanadzo, *Embodying Vulnerability: A Feminist Theory of the Person*, 20 Duke J Gender L & Policy at 61).

Stanley, 16 N.Y.S.3d at 912-13 (emphasis added).

As EPTL 7-8.1 created legal personhood in those nonhuman animals within its reach, New York public policy already recognizes that at least some nonhuman animals are persons capable of possessing one or more legal rights.

V. CONCLUSION

Kiko is an autonomous and self-determining being who can choose how to live his life and who possesses dozens of complex cognitive abilities that comprise and support his autonomy

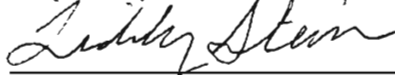

and bodily liberty. Moreover, he can shoulder duties and responsibilities both within chimpanzee societies and within human/chimpanzee societies. He is therefore entitled to legal personhood as a matter of common law liberty and equality, which in turn, entitles him to a writ of habeas corpus. He is further entitled to immediate release from what will otherwise be a decades-long imprisonment.

Professor Mathias Osvath made it clear that every day of Kiko's perpetual imprisonment is hellish, as chimpanzees "have a concept of their personal past and future and therefore suffer the pain of not being able to fulfill one's goals or move around as one wants; like humans they experience the pain of anticipating a never-ending situation." (Osvath Aff. at ¶16).

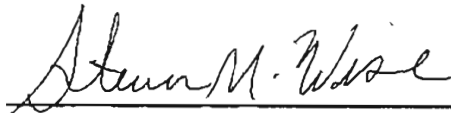

Kiko cannot be released to Africa or onto the streets of New York State. But he can be released from his imprisonment in New York. This Court should order him released from the Respondents' control and then determine where best to place him. The NhRP strongly recommends that he be delivered into the care of Save the Chimps in Ft. Pierce, Florida, forthwith, there to spend the rest of his life living as an autonomous, self-determining chimpanzee to the greatest extent possible in North America, amongst chimpanzee friends, climbing, playing, socializing, feeling the sun, and seeing the sky.
